T-Shirt Shop™

How to Design Your Own T-Shirt in Five Easy Steps

1

Get Started

The first thing to do is to boot up T-Shirt Shop. You'll be greeted by an easy to understand menu that lets you see everything the program can do at a glance. You can LOAD pictures from the picture disk, DRAW your own pictures, TYPE in any slogan you can think of, and COLOR in your pictures.

2

Choose a Graphic

Now choose LOAD from the menu. You can choose from more than 50 supplied graphics. Hollywood celebrities, political and historical figures as well as plants and animals represent some of the categories included. For a change, you can draw your own picture. In either case, once you choose a picture, the outline will appear on the screen, ready to be colored.

3

Paint It

Here's your chance to show your artistic ability. Using the palette of colors, the brushes and the spraycans, you can paint a rainbow of color—you can even color in the picture to match your eyes! If you want, the program will automatically paint the picture with colors you choose.

4

Add Type

You've got a beautifully colored picture now. Go to the TYPE section, and choose from a variety of type styles. Name your picture, or attach some absurd sayings. Create catchy political slogans, humorous sayings, or something incredibly tacky.

5

Print It

Print your shirt design onto the special iron-on transfer paper (free sheets are included). With T-Shirt Shop, what you see on the screen is exactly what you'll get on your t-shirt. The paper will work with any ribbon—even in color—and will transfer perfectly to any t-shirt. Print your design, iron the transfer onto your shirt and you're in business. Impress your friends! Wear them into the office, to the beach, or to a wedding. T-shirts make great gifts, too!

T-Shirt Shop is the only program that allows you to design, paint and create your own t-shirts. In just minutes you'll be wearing your creations. Be the first on your block with a custom designed t-shirt, sweatshirt or even underwear...from T-Shirt Shop.

Available at fine software dealers

Insist on GSRAM™ When You Buy Your IIGs™

*Expand the IIGs RAM and ROM with the GSRAM or GSRAM Plus
with ROM Pak. Available now with 256K to 8 MEG!*

GSRAM Plus™

GSRAM™

Remember the 16K cards for the II+ and the 64K cards for the IIe? At the time, that much memory seemed like a lot. But when the owners of these memory cards came to us for more memory, many had to throw away their smaller Apple memory cards or try to sell them. Most of our customers told us that had they known about Applied Engineering's larger memory cards when they bought their Apple, they would have purchased them at the same time.

GSRAM and GSRAM Plus are available now, allowing up to 8 MEG of memory expansion. That's 8 times the memory capacity of Apple's card and just look at the benefits that only GSRAM and GSRAM Plus have over Apple's card:

- Lower cost
- Has 6 RAM banks (Apple's card has 4)
- Has memory expansion port
- Has ROM expansion port
- No configuration blocks to set
- No soldered in RAM chips
- Expandable to 8 MEG
- Expands AppleWorks internal limits
- Built-in Hi-Res self-diagnostic software
- 5 year hassle free warranty (Apple has a 90 day warranty)
- Made in USA

GSRAM for More AppleWorks Power

Only GSRAM and GSRAM Plus eliminate AppleWorks internal memory limits, increasing the maximum number of records available from 6,000 to over 25,000 and only GSRAM and GSRAM Plus increase the number of lines permitted in the word processing mode from 6,000 to over 15,000. And only GSRAM and GSRAM Plus offer a built-in printer buffer so you can continue using AppleWorks while your printer is printing. GSRAM and GSRAM Plus even expand the number of lines in the dipboard from 255 to 2047 and will auto segment large files so they can be saved on two or more disks. You can

even have Pinpoint or Macroworks and your favorite spelling checker in RAM for instant response. GSRAM and GSRAM Plus will even display the time and date right on the AppleWorks screen. Nothing comes close to enhancing AppleWorks so much.

Turn Your IIGs into a Giant

Simply plug GSRAM into the IIGs memory expansion slot and you've got up to 8 megabytes of RAM at your fingertips—all of it instantly and automatically recognized by the IIGs. GSRAM is compatible with all IIGs software, including AppleWorks, as well as BASIC®, ProDos, DOS 3.3, PASCAL®, "C" and CP/M®.

Grow by Bytes or Megabytes

We offer GSRAM in two configurations so you can increase your memory 256K at a time (GSRAM) or a megabyte at a time (GSRAM Plus). Both offer full compatibility, lower cost than other boards, and easy expandability. And both are extremely low in power consumption. A fully expanded GSRAM operates at only 375 ma, and GSRAM Plus at only 270 ma (even with 6 megabytes on board!)

GSRAM—for Normal Memory Requirements

GSRAM is available with 256K, 512K, 1 MEG or 1.5 MEG of memory already on board. If you don't need the full 1.5 MEG now, you can choose a GSRAM with less memory and expand it up to 1.5 MEG in the future—or upgrade to GSRAM Plus for a small charge.

Steve Wozniak, the creator
of Apple Computer

*"In quality,
performance,
compatibility,
expandability and
support, Applied
Engineering's GSRAM
and GSRAM Plus are
number one."*

With an optional piggyback card, you can expand GSRAM even higher than 1.5 MEG! (Other cards are only expandable to 1 MEG.)

GSRAM Plus—for Growing by Leaps and Bounds

GSRAM Plus is the first Apple memory card to use 1 MEG RAM chips on the main board. It's available with 1 to 6 MEG on board. If you don't need the whole 6 MEG now, you can buy a GSRAM Plus with less memory and easily expand it in the future.

GSRAM Plus can be expanded up to 8 MEG with an optional piggyback card.

Easy Expansion

Both GSRAM and GSRAM Plus use standard RAM chips that are readily available and just plug right in. So unlike other cards, you'll find expanding your GSRAM or GSRAM Plus easy, convenient and very economical. And with our optional ROM expansion module you can even increase the IIGs's ROM space and all in just one slot.

Quality and Support of the Industry Leader

Applied Engineering is the largest supplier of Apple peripherals in the world. We invented the first large RAM cards for the Apple. With a 5-year "no-hassle" warranty and outstanding technical support, you can be sure GSRAM and GSRAM Plus will deliver the performance you're looking for—or return them within 15 days for a full refund.

EDITOR'S NOTE

THE LONG VIEW

There are days when, based on my mail, I feel like the Miss Lonely Hearts of computer owners. The letters that evoke these feelings in me are almost always from people who bought a computer based only on price. And I don't know how to come up with helpful answers.

When one of these letters arrives—full of questions about where to buy software, how to find help, what kinds of peripherals are available—I want to either groan or scream. Inevitably my mind turns to late night TV commercials—the ones for warehouse sales of computers that never or only barely appeared on store shelves.

Every time I think of someone buying one of those defunct machines, I sigh: Another potentially confused letter-writer!

The horror is not the letters I receive. It is instead the despair the writers feel and the despair, in turn, I feel at not being able to offer help. And it is also one more blow to the whole computer industry and to the reputation of computers for home use. We all end up getting damaged and damned.

After I'm done feeling sorry for these poor souls, the anger sets in. Buying a computer is a major decision. It requires *and* deserves long and careful consideration. Thoughtful, cautious computer shoppers rarely seem to regret their decisions. Even if their model or brand eventually goes out of production or becomes outdated by newer technology, there's probably been a long-standing and consistent record of satisfactory service.

Careful shoppers often get good use out of their computers and become careful shoppers again, stepping up to a new model or a second machine. Their letters are likely to describe the *pleasure* they get from computing.

If there's one thing that successful

computer owners and successful computer manufacturers have in common, it's the long view. That was what impressed me most about IBM's new line of computers, the Personal System/2. While the rest of the world seemed to be focused on "clone killing" and price wars, IBM was looking at the future and long-term needs of its existing and potential customers. When I shared these thoughts with a friend, he said, "You know, I'm in awe—it just may be the most Japanese thing an American company has done."

Right now, we don't know how IBM's plan will work out. But we do recommend the long view, especially when you're shopping for a computer. Use our Buyer's Guide to Computers to help you make your decision and base it on your current and future needs.

We at FAMILY COMPUTING take the long view, too. That's why we stick with you for all your computing needs at home. We're in this together, for the long haul.

THE Expert System for Good Writing

RIGHTWRITER®

Good Writing is Good Business. RightWriter is a writing tool to help you produce clear, powerful, business writing. RightWriter finds over 3000 errors in grammar, usage, style, and punctuation. This easy to use software package runs on IBM-PC's and compatibles with over 20 leading word processors.

Here is what the experts say:

"... a Must Buy! ... Four stars throughout."

— Family Computing 12/86

"RightWriter is an excellent, lowcost, eye-opening software package that lets you see your writing through the 'eyes' of an impartial judge..."

— Inside Word Management

"CBGEH's editors loved RightWriter ... It's a great guide for the businessperson, freelance writer, and student alike. We highly recommend it."

— Computer Buyer's Guide & Handbook 6/86

"RightWriter is a fast, handsomely packaged, easy to use program..."

— PC Magazine 5/86

"I recommend RightWriter. The program is a simple, time efficient aid to clear concise writing."

— IEEE Software 9/86

READER APPRECIATES MS-DOS ARTICLES

I enjoy reading FAMILY COMPUTING each month; keep up the good work. I particularly liked your article on MS-DOS tricks (October 1986), and would like to see more articles like that. I'm also interested in an article on how computer-language compilers, such as Turbo Basic and QuickBASIC, are used.

VERNON SHIRLEY
Mattoon, Illinois

EDITOR'S NOTE: Keep an eye on Steve Morgenstern's MS-DOS column and Henry Beechhold's IBM column in the Machine Specifics department, and watch the Home Office department for more on MS-DOS tricks and software.

HIS TYPE OF BUSINESS

I am a professional proofreader presently working for two employers—a publisher (part-time) and a typographer (full-time). I am seriously planning to work on my own as a proofreader/typesetter.

What I have in mind is computerized proofreading and typesetting, using a spelling checker or similar device.

When a manuscript is sent to me, I would word process it, edit it with a spelling checker, and typeset it before sending it to my client for layout and pasteup.

I would like to find out what kind of computer and accessories are needed for word processing and typesetting. Also, can I electronically transmit my finished product to the client? And, if so, what kind of equipment will I need for that part of the operation?

GEORGE A. BOAMAH
Staten Island, New York

EDITOR'S NOTE: FAMILY COMPUTING has recently published articles on word processing ("Guide to Writing with Computers" series, August 1986–March 1987); typesetting (Home Office, "Her Type of Business," April 1987; and "Top 10 Computer-Based Home Businesses" in this issue); and telecommunication (in each month's Telecomputing department, and occasional features). Articles on home-business subjects appear regularly. Keep in mind that unless you send or deliver the actual type

to your client, files that you format and transmit will contain typesetting codes. Those files could be transmitted to a typesetter, who would return camera-ready type, minus the codes, to your client.

THE GREAT COMPUTER SEARCH

I am 43 years old, married, and the father of two. I have a part-time retail store, and want a computer—and that's where my problem begins!

I have been a subscriber of FAMILY COMPUTING for approximately a year and a half, trying to "learn" about computers. Your magazine has been the best I have encountered—the beginner is covered, and the more advanced "computer nut" is covered. All the other magazines I've read get too technical or favor a certain type of machine.

I recently walked into the only two independent computer stores in Lancaster County (that really serve beginners), and only one of them tried to help. Sure, we have the chain stores, but the "big guys" can make it seem even more intimidating!

I decided I really want an Atari 1040ST, color monitor, and eventually, a color printer of some kind. Then Radio Shack comes out with their Tandy 1000 SX—what do I do now? The Tandy is expandable and has IBM compatibility and support—wow, just what I want! The Atari 1040ST is powerful, fast, and easy to use—wow, just what I want! "Say, Roy," a friend tells me, "I heard Hyundai is coming out with a PC compatible, really inexpensive—that's what I'm waiting for!"

I'll let you folks know what I end up buying and when, and why I got it!

ROY C. MIESSE, III
Lititz, Pennsylvania

PLANNING THE FUTURE

Software to Help Your Children Choose a College and a Career

BY TONY MORRIS

"What am I good at? What do I want to do with the rest of my life? Where will I go to college?" As a child approaches his or her senior year of high school, questions like these take on a special urgency. They are difficult questions to answer, not only because they are so important, but also because they lead to so many choices. There are thousands of colleges and tens of thousands of careers. To make matters worse, most children—and parents—suspect that there must be one perfect college and one perfect career—if we could just find them! Well, the myths of a perfect college and a perfect career are just that—myths. But the bewildering array of colleges and career alternatives is real. Most college-bound students need all the help they can get in boiling down the choices.

Many of us have had experience with college-selection books, which can be very helpful. But when a high schooler is considering any and all colleges across the country, those books can be overwhelming. Just a couple of years ago, my daughter, Anne (now a freshman at the University of Michigan), tried to choose a college by thumbing through such books. One night, when I walked into our den, Anne looked up from a stack of books and, out of frustration, announced, "Dad, I've decided: I'm not going to college."

NORTH, SOUTH, EAST, OR WEST?

Since then, I've discovered that software is admirably suited to provide college- and career-selection assistance. For years, many schools have been providing their students access to computers that offer this kind of help. Today, there are also excellent programs for home use that can help the college-bound plan for the future. One example is *Peterson's College Selection Service* (Peterson's Guides; [800] EDU-DATA),

available for the Apple II series, IBM PC/PC XT, and TRS-80 III/4. Using the software's detailed menus, your child can identify the features he or she considers ideal in a college environment.

Let's say that your teenager wants a moderately selective, four-year public college or university that costs less than \$5,000 a year (for state residents) and offers an honors program and study abroad. According to *Peterson's*, there are lots of those around—284 to be exact. Well, if the truth be known, it would be nice if the campus were co-educational: Now the options are down to just 79. *Peterson's College Selection Service* has eliminated 95 percent of all four-year colleges. And just as the software helps you whittle down the considerable number of alternatives, it gives you a more comprehensive list of colleges from which to choose—a nice double benefit!

Whatever your child's preferences, *Peterson's College Selection Service* makes it easy to zero in on the most appropriate colleges in just a few minutes. (The search described above took just five minutes from start to finish.) The easy-to-use menus are a reminder of features to consider, and your child can always back up and change his or her decisions (a nice option when your fussy son discovers that he's eliminated all colleges from his pool!). When

ready, your child can call up not only a listing of colleges that meet predetermined criteria, but also their page numbers in the accompanying book, *Peterson's Guide*. Included in the package, this massive book provides detailed descriptions of each college.

Actually, there are two *Peterson's* college-selection packages—one for four-year colleges and another for two-year colleges. Both software packages are outstanding in every sense with one possible exception: They are relatively expensive. The four-year package costs \$159; the two-year package is priced at \$109.

Using a modem, your child might be able to cut costs somewhat by accessing *Peterson's* entire data base through one of the several national networks. Knowledge Index and CompuServe Information Service are two on-line networks that provide access to the data base to subscribers for a connect-rate fee of \$6–\$12.50. (On Knowledge Index, the data base can be accessed by typing EDUC2, while on CompuServe, by typing GO PCG.)

Another package, *The Perfect College* (Mindscape; [312] 480-7667), is an incredible bargain for just \$20; it's available for the 64K Apple, C 64/128, IBM PC/PCjr, and Macintosh. For that price, you'd expect some limitations—and you'd find them. *The Perfect College* covers only accredited four-year colleges in the United States, sticks to pretty basic selection criteria, and doesn't include a printed guide.

There's also an element of uncertainty about *The Perfect College*. Users don't know until the end how many colleges are left in their pool (if any!) or which ones they are. But the final list of colleges includes not only an "A list" of those that match your selection criteria exactly, but also a "B list" of others that come very close. If your child's preferences are fairly straightforward, and if he or she is willing to spend a bit more time with a series of searches, *The Perfect College* is a great help. —

Why limit their education?

If your kids have a computer, they should have the Grolier Online Encyclopedia*—the online edition of the Academic American Encyclopedia.

The Grolier Online Encyclopedia is updated quarterly with the latest, most time-sensitive information. And finding facts is faster and easier online. At your fingertips are more than 31,000 articles on the most contemporary issues in science, technology, politics, business and social sciences. Plus plenty of easy-to-understand reference features.

When you buy a one-year, renewable subscription to the Grolier Online Encyclopedia, you also get the Grolier

Users Guide, a lifetime subscription to CompuServe (for members in good standing), including \$15 worth of online usage time, the CompuServe Users Guide and a free subscription to the monthly newsmagazine, *Online Today*. All for just \$49.95. Usage rates for standard online time are just 10¢ a minute.

All you need to access this unlimited world of information is a modem and just about any home computer.

No matter what you've given your kids to help improve their education, they shouldn't be without the unlimited advantages of the most versatile, powerful and current home encyclopedia.

Plus CompuServe, the world's premier online information service.

Visit your computer dealer today. To order direct, or for more information, call or write:

SCHOLARSHIPS OR GRANTS?

Identifying a pool of possible colleges is just your child's first step. Then there's always the question, "Can I afford to go there?" Here, too, the computer can be helpful. Both *Peterson's College Selection Service* and *The Perfect College* let users select colleges that fall within a given cost range. But other software provides even more assistance in determining the amount of financial aid needed and helps locate obscure sources of aid that may make it possible for your child to attend a more expensive college.

Again, the top of the line is *Peterson's Financial Aid Service* (\$195; Apple II series, IBM PC/PC XT) which does almost everything you could expect. It first provides an estimate of the amount of money your family should be prepared to contribute toward your child's college costs. Then, it can determine the average cost of attending various types of colleges in a particular state or region of the country. If your child has a particular college in mind, he or she can get an estimate of the cost of attending that college, an indication of the amount of financial aid needed, and an estimate of the likelihood of receiving the necessary financial aid from the college.

This is all tremendously helpful in sketching the boundaries of college costs, but *Peterson's Financial Aid Service* offers more. If your child is of Lithuanian descent, or a Methodist, or a soapbox derby competitor, or any of a hundred other things, the software will identify otherwise obscure private scholarships for which he or she might be qualified. And the enclosed, printed *College Money Handbook* provides answers to just about any remaining questions you or your student might have.

ESQUIRE, C.P.A., D.D.S., OR M.D.?

Now that your teenager has a list of potential colleges and respective costs, in what areas of study will he or she concentrate? Again, the computer can be of some help. It's worth noting that many students change their majors several times during their undergraduate years.

However, it's still worthwhile to narrow the range of possibilities, and *Peterson's Career Planning* package (64K Apple; \$245) is an ab-

CONNECTION

solutely superb (but again expensive) place to start. Successful career planning with or without a computer starts with an understanding of abilities, interests, and preferences. Not surprisingly, *Peterson's Career Planning Service* starts with a series of exercises devoted to exploring these aspects. This portion of the program can take several hours to complete, but the time spent is richly rewarded in the second portion of the program where the software matches your child's personal assessment to the requirements and characteristics of more than 600 occupations stored in the data base. The resulting list of several dozen occupations forms an excellent starting point for thinking about careers.

What if your teenager's favorite career doesn't show up on the list? He or she can match the characteristics of that career to the personal assessment and see just where the two did not mesh. Perhaps your child needs to re-evaluate his or her personal interests and skills—or perhaps to think a bit more about whether that career is really a good choice. In either case, the software helps you progress toward identifying careers that build on your child's strengths and provides the kinds of activities and work patterns that he or she will find satisfying.

As your child explores the careers on the initial list and discusses them with other people, the list will likely shrink to 12 or 15 careers that seem to have special promise. The software then guides your child in exploring those careers more deeply. Descriptions are provided not only for occupations on the list, but also for related ones. The software also gives suggestions for ways to find additional information about the most promising careers. When your child finally narrows the search to a handful of exceptionally promising careers, the software helps reduce the choices even further. Your college-bound child will be left with three to five excellent career options to explore over the ensuing weeks and months.

With the right software, then, some of the difficulty in identifying good, affordable colleges and satisfying careers can be reduced or eliminated. But the best software is only supportive: There's still a lot of introspection inherent in making such important life decisions. ☐

Turn Your Child's Summer into a Valuable Learning Experience!

Many of you already know our critically acclaimed educational software programs including *Reader Rabbit*, *Rocky's Boots* and the recently released *Writer Rabbit* and *Math Rabbit*. Teachers and parents have championed these programs because they build problem-solving and creative thinking skills while teaching the basics. Equally important, children love the challenging games and animated graphics.

Think Quick! An exciting new learning challenge!

Now, The Learning Company invites children to explore a new program where the name of the game is to *Think Quick!* While exploring the many rooms of a castle, players are challenged to overcome a variety of obstacles. The program develops important thinking skills as children solve mysteries and race through six intricate game levels.

Think Quick! (Ages 7-12)
 Apple II Family \$39.95
 IBM (available this Fall) \$39.95

...And don't miss our Three Rabbits. They develop thinking skills and make learning "The Three R's" fun! Now available for IBM and Compatibles!

MAKING BUSINESS FORMS

Three Good and Inexpensive MS-DOS Programs For Producing Letterhead, Invoices, and Other Business Forms

BY HENRY E. BEECHHOLD

Now that you've taught your computer to process text, manage data, manipulate numbers and be helpful with other business chores, why not give it a lesson in business-forms design?

Even the smallest businesses need a variety of standard forms—such as invoices, order forms, letterheads, and calendars. But any one form may not be needed in bulk, and the setup cost for a professional print job is high. You can use your computer to help produce custom-tailored forms when needed and in the number you need, at little more than the cost of the printer paper.

There's nothing new about conventional business forms; you can even order them through the mail and fill them in with your computer or typewriter. Programs designed specifically for generating customized forms are the hot, new items. Macintosh owners can choose from a wide range of page-layout or desktop-publishing software, typified by Aldus's *PageMaker* and Letraset's *Ready,Set,Go!3*. Both these and drawing software (such as Apple's *MacDraw*) can be used for forms design, even though they are general-purpose programs that are just as effective for designing books or newsletters.

Owners of IBM PCs and compatibles, however, have access to a wide range of programs specifically designed for forms generation. These programs fall into two types: graphic layout (GL) and symbolic layout (SL). The former require that you actually draw the form on the screen. You end up with a more-or-less literal representation of the form you can then print out. The latter (SL) gets where it's going under the control of various commands entered in an AS-

FormWorx

CII file you create with a word processor.

Either way, computer-generated forms can be filled with data on-screen, and then printed; or printed blank, and filled in by typewriter, by hand, or with a computer. And often, you can merge data from other programs (such as Lotus 1-2-3) onto the forms before printing them.

Regardless of the method of design (I find the SL programs faster and easier to use) printing will take some time for two reasons: the software has to prepare (preprocess) the graphic data for the printer, and the printer itself has to cope with a complex set of commands. Forms printing on a dot-matrix printer generally means using the enhanced mode, which prints at about a third the draft-mode rate.

Laser printers are likewise slowed. Popular laser printer ads that claim an eight-page-per-minute throughput hold true only for straight text printed in the "native" font. Adding graphics (as well as special fonts) slows the process considerably.

And regardless of the sophistication of the software, forms printed on an impact dot-matrix printer will look like computer printouts. For

near-printshop quality, you must use a laser printer.

SOFTWARE TO GENERATE BUSINESS FORMS

Each of the three programs reviewed here runs on IBM PC/XTs and true compatibles, and each costs under \$100. All three can be used with the HP LaserJet printer, but only *LaserWare* requires it. Each offers a great deal of capability in producing customized business forms, and none is difficult to learn.

EZ-Forms Executive, Version 1.1

\$89; 384K IBM PC & compatibles; if used with HP LaserJet, font cartridge HP92286Y required.

EZX Corporation

403 NASA Road One East

Webster, TX 77598

(713) 488-0210 (30-day free phone support to registered users)

EZ-Forms Executive includes a comprehensive inventory of pre-designed forms (over 100), and each is reproduced in the manual. To print a form, all you need to do is load the program, select the print command from a menu, and print. In all likelihood, you'll find what you need in the *EZ-Forms* library.

In the event you don't find what you're looking for, the program is equipped to help you either create a new form from scratch or customize an existing form. Forms may be printed blank, filled out from the keyboard, or merged with data from an ASCII textfile.

Form design is of the graphic layout (GL) type. The program, which doesn't support a mouse, can draw lines and rectangles (including borders), working somewhat like an Etch-a-Sketch. To draw a line, you first mark the starting point by pressing a function key, then mark the end point with the same key. The second keystroke also draws the line.

If you're filling in the form with

HENRY E. BEECHHOLD, who writes the IBM column in *Machine Specifics*, is the author of *The Brady Guide to Microcomputer Troubleshooting & Maintenance* (Simon & Schuster).

At last! DOME...

America's favorite bookkeeping system runs on your computer.

Now the popular DOME bookkeeping system is easier and quicker to use than ever, through the power of your IBM, Apple, Commodore or Tandy computer.

It works just like the familiar DOME record book used by millions of people for over forty years. Just enter receipts and expenses on each "page" on the screen. You can even turn the pages back to look at prior weeks or months. And you can erase! No more smudges, no more cross-outs. Just clear, error-free entries for all your transactions.

The entire DOME book on a single diskette!

In a simple format DOME includes a complete system for business and tax recordkeeping: income, expenses, payroll and financial reports. Plus, exclusive "pop-up" accessories appear on your screen with a single keystroke: a calculator, notepad, list of accounts and even a perpetual calendar...everything you need to maintain a set of books and business records for a full year.

And not only does DOME keep your records but it will help you analyze them with powerful reporting capabilities.

Reports you always wished you had.

Look up or list every expense for the past year, month or day. You can do it by payee or account. Analyze income by product or service. If you have employees, DOME will help when 941 and W-2 forms are due. And print weekly or monthly financial statements showing profit or loss.

Sets up in less than 10 minutes!

Because DOME is based on the familiar DOME book, you already know how to use it! Save time setting up, save time learning and save time each week—because DOME does all the addition for you with complete accuracy. All you do is enter your income and expenses, and let DOME do the rest!

Try it yourself for 15 days without obligation!

System Req: IBM PC, XT, AT or compatibles, 256k;
Apple IIe, IIc; Commodore 64, 128; Tandy 1000, 1200,
3000, 256k. Printer optional.

Two-On-Two Basketball Action

One-on-one is OK for a little practice, but real basketball is a **team** sport. To be really good at it, you need **all** the skills — passing, dribbling, shooting, stealing and rebounding. That's what it takes to win a championship. That's what **GBA Championship Basketball™: Two-on-Two™** delivers.

From the roar of the crowd to the swish of the net, from slam dunks to three-point shots, it's all here — fast and competitive.

Not only is there **team** action, but you can even compete in a 4-division, 23-team league — all the way to the playoffs and the GBA Championship game!

When you're ready to jump into the big leagues of computer basketball, start with the game that begins where the others leave off — **GBA Championship Basketball: Two-on-Two.**

Commodore Amiga screen shown.

"...the best arcade basketball game I've seen. If you liked *One on One*, you'll *love* this..."
— Randy Chase,
Guide to Computer Living

GAMESTAR ★

Tandy 1000 and 100% compatibles.**

HOME OFFICE

data on the screen, a feature called "spreadsheet style math" can be used to make calculations.

Of the four draw-on-the-screen programs I tested, this one was the easiest to use and did its work considerably faster than the others. The *EZ-Forms* library is a big bonus.

FormWorx

\$95; IBM PC & compatibles (320K recommended)

If used with HP LaserJet, font cartridge HP92286Y required.

FormWorx Corporation
1365 Massachusetts Avenue
Arlington, MA 02174
(617) 641-0400

Formworx includes a number of predesigned forms for time management (calendars and planners), sales management (commission record, lead log, etc.), and routine business operations (an invoice, a purchase order, and the like). Blank grids (for charts), organization charts and diagrams, and even an athletic play-off tree are available.

For original designs, *Formworx* allows you to make rectilinear designs (no circles, etc.), which you construct with the graphics elements provided in the standard IBM graphics set. *Formworx* does not support a mouse, relying instead on the function keys, much like *EZ-Forms* does.

To accomplish a task such as sizing a box, you must define its range by moving the cursor. The range is marked, and you can proceed with saving or printing the box. The Smart Cursor feature aids the drawing process by automatically moving into the correct position following the placement of, say, a right-angle corner. In general, you manipulate images and text on screen in typical word-processing fashion.

A set of pull-down menus allows access to all of the graphics and text-manipulating features of the program, and a macro facility makes it easy to automate a number of activities. Several predefined macros are included (for example, ALT-3 draws a thick box), and you can define your own, each containing up to 1,000 keystrokes.

Because there is no full-screen preview, you have to scroll screens to get a picture of what any but the smallest forms will look like.

Forms can be filled in from the

keyboard, or merged automatically from disk. You can show parts of a form on the screen but prevent them from being printed out (Hide/Unhide features).

FormWorx is a cost-efficient program comparable in many respects to *EZ-Forms*. Its manual is far superior, but the resulting forms will be about the same.

LaserWare

\$99.95; IBM PC & compatibles; 45K DOS 2.0 or higher
HP LaserJet series; printer required.
SWFTE International, Ltd.
P.O. Box 219
Rockland, DE 19732-0219
(302) 658-1123

SWFTE calls *LaserWare* "The Resident Publisher." In fact, the product provides a full stock of formatting commands, sufficient to produce not only forms, but entire documents. To use *LaserWare*, you load it, then load your word processor—so both are in memory at once. You enter the desired text along with the appropriate formatting commands, and send your file off to the printer using the word processor's own print command.

LaserWare provides for lines, boxes, grey levels, hatched shadings; every type of text formatting (justification, centering, and the rest); and font selection on the HP LaserJet printer. You can merge text and graph files, and capture and include graphics images from any program. The program will even make tables according to your specifications—with data placed where you want it.

Commands are set in brackets ([]) and can appear anywhere in the text. For example, [.LC] placed in front of a text string will cause the string to be centered. Fonts can be mixed within a line simply by marking each desired word or phrase with a font number, thus: [3]. (An on-line table tells what numbers to use for the font set you are working with.) Mixed fonts in a given line will be properly spaced and justified.

The detailed manual should answer all of your questions. A little time spent with the manual's tutorials will put you into the picture with very little pain and strain. Flexibility, ease of use, and low cost make *LaserWare* an excellent choice for both forms and document development. ☐

Only NRI teaches you to service all computers as you build your own fully IBM-compatible microcomputer

With computers firmly established in offices—and more and more new applications being developed for every facet of business—the demand for trained computer service technicians surges forward. The Department of Labor estimates that computer service jobs will actually *double* in the next ten years—a faster growth rate than for any other occupation.

Total systems training

No computer stands alone... it's part of a total system. And if you want to learn to service and repair computers, you have to understand computer systems. Only NRI includes a powerful computer system as part of your training, centered around the new, fully IBM-compatible Sanyo 880 Series computer.

As part of your training, you'll build this highly rated 16-bit IBM-compatible computer system. You'll assemble Sanyo's "intelligent" keyboard, install the power supply and disk drive, and interface the high-resolution monitor. The 880 Computer has two operating speeds: standard IBM speed of 4.77 MHz and a remarkable turbo speed of 8 MHz. It's confidence-building, real-world experience that includes training in programming, circuit design and peripheral maintenance.

NEW!

Train with the newest Sanyo 880 Series Computer—its fully IBM-compatible and runs almost twice as fast as the IBM PC!

Your NRI total systems training includes all of this: NRI Discovery Lab® to design and modify circuits • Four-function digital multimeter with walk-you-through instruction on audio tape • Digital logic probe for visual examination of computer circuits • Sanyo 880 Series Computer with "intelligent" keyboard and 360K double-density, double-sided disk drive • High resolution monochrome monitor • 6K ROM, 256K RAM • Bundled software including GW BASIC, MS DOS, WordStar, CalcStar • Reference manuals, schematics, and bite-sized lessons.

NRI is the only technical school that trains you on a total computer system. You'll install and check keyboard, power supply, disk drive, and monitor, following step-by-step directions.

No experience necessary—NRI builds it in

Even if you've never had any previous training in electronics, you can succeed with NRI training. You'll start with the basics, then rapidly build on them to master such concepts as digital logic, microprocessor design, and computer memory.

PERSONAL FINANCE

YOUR MONEY AND YOUR MAC

A Look at MacMoney, a Personal-Finance Program For the Macintosh

BY MATTHEW STERN

Many consumers are charmed by the Macintosh's knockout desktop-publishing capabilities. Business people use the Mac to create illustrated ads, fliers, and newsletters; students use it to write eye-catching term papers; a friend of mine even uses it to produce a monthly magazine for her friends and relatives.

The same Mac that is touted for its finesse at creating illustrated manuscripts is an equally effective personal-finance tool. Its ability to combine text and graphics, ample memory, fast processor, and simple point-and-click controls—all so perfect for desktop publishing—are also pluses for balancing budgets. With its fonts and near-typeset-quality printing on the Apple LaserWriter printer, the Macintosh can make your financial records look like a million bucks, even if you have only a hundred.

A POINT-AND-CLICK ACCOUNTANT

One program that showcases the Macintosh's power, ease of use, and graphics capabilities is *MacMoney*, an integrated accounting and financial-planning program published by Survivor Software, Ltd. (\$75; 11222 La Cienega Blvd., Suite 450, Inglewood, CA 90304; [213] 410-9527). If you want a complete personal-finance system, the program can help you create budgets; manage your checking, savings, and credit-card accounts; monitor your assets and liabilities; and print checks, reports, and graphs.

Although *MacMoney* performs sophisticated record keeping, you don't have to be a bookkeeper to use it. With the help of my Macintosh's pull-down menus, I learned the program in half an hour with only a few glances at the manual. If you can't remember how to perform a function, *MacMoney* provides on-line help screens as you need them.

MATTHEW STERN is a contributing editor of FAMILY COMPUTING. You can address questions to him in the FAMILY COMPUTING Forum on CompuServe (GO FAMFORUM). His identification number is 73547.2420.

File Edit Transactions Lists Plan Reports Graphs

The screenshot shows the MacMoney application window. At the top is a menu bar with 'File', 'Edit', 'Transactions', 'Lists', 'Plan', 'Reports', and 'Graphs'. The main window is divided into several sections:

- Names:** A list of names with 'American Express' selected. Other names include Auto Insurance Co., Department Store, Protect-All Insur Co., Stay Well Insur Co., The Market, and Visa Bank.
- Personal Checkbook:** A form for entering a check. It includes fields for Date (02/20/87), Check # (2564), Pay To (Department Store), Memo (various items), Category (clothes), and Balance (345.86). There are buttons for 'Save', 'Quit', and 'Split'.
- Categories:** A table with two columns: 'Category' and 'Type'. It lists various categories like meals out, office supplies, pension income, Personal Checkbook, sales income, Savings Account, subscriptions, and transfers, each with a corresponding type (Expense, Income, Bank Account, or Expense).
- ID Codes:** A table with two columns: 'ID' and 'Name'. It lists codes like AT (auto insurance), HE (health insurance), HM (home insurance), and TR (transfer funds).

A check-transaction entry screen on *MacMoney*.

Transactions are entered on on-screen forms that look like checks. Unlike handwritten checks, *MacMoney*'s on-screen check forms don't require that you plug in all the information for each one. You can put the names and addresses of companies you frequently write checks to in a Names List. To write a check to a particular company, select Names List from the Lists menu and choose the name to pop into the payee blank on your check.

While bank-statement reconciliation can be a hair-pulling task, *MacMoney* simplifies matters. Just click on the transactions that cleared at the bank and then click on Reconcile. A dialogue box will tell you if your checkbook balances out and—if not—by how much it is (or you are) off.

MacMoney also will let you print a variety of reports, including income and expense reports, personal balance sheets, and transaction reports. If one of these report forms doesn't suit your needs, you can customize it to show specific transactions. You can print your reports on the Apple ImageWriter dot-matrix printer, or if you have access to a LaserWriter, *MacMoney* can print them in near-typeset quality. If you would like a visual representation of your financial data, *MacMoney* generates pie, bar, and trend-line charts.

If you deal with many money

transactions, you might be interested in knowing that 3,000 transactions can fit on a single-sided Macintosh disk or 6,000 on a double-sided or hard disk. *MacMoney* runs on a regular 512K Macintosh and takes advantage of the additional features of a Macintosh Plus.

You may need to transfer your *MacMoney* data to other programs. For instance, if you operate a home business, you can send your budget to a spreadsheet program like *Microsoft Excel* (Microsoft Corp.) for further analysis or export it to *PageMaker* (Aldus Corp.) or *Ready, Set, Go!3* (distributed by LetraSet) to show clients how well you did last year. You can transport your yearly financial information into a tax-preparation program like *MacIntax* (SoftView), which lets you enter information onto forms that look exactly like the Internal Revenue Service forms.

MacMoney offers a new approach to money management. It's a sophisticated personal-finance program that's easy to use, partly because of the Mac's unique features that afford you more ways to use and analyze your financial information. 

EDITOR'S NOTE: This is the first in a series of articles that review personal-finance software. Next month, FAMILY COMPUTING will take a look at another program of this kind.

Apple IIe/IIc compatible

Now your kids can afford to do their homework

More and more students are learning with computers. However most parents haven't been able to work a computer into their budget. The Laser 128 Apple-compatible computer will let you do all those things that you and your family want to or have to do — homework, write reports, even play games for a fraction of the cost of an Apple. With a Laser you can work out your budget on a computer, instead of breaking it with one. The Laser lets you take advantage of the largest software library available, so your child can learn more at home with the same programs they learn on in school. And, you can do your work at home on the Laser, too.

The Laser 128 with all its features: built-in disk drive; 128K RAM (expandable to 1 megabyte); serial, parallel, modem and mouse interfaces; 80 column text mode; numeric keypad; and an expansion slot; makes for a pretty educated buy. When you do your homework on which computer to buy, you'll find the Laser 128 at the head of the class with value. For more information on the Laser 128 and the name of your nearest dealer, contact Video Technology Computers, Inc., 400 Anthony Trail, Northbrook, IL 60062, or call (312) 272-6760.

16 GREAT GAMES FOR BEGINNERS

BY JAMES DELSON

If you're a computer owner who has never played a computer game, isn't it about time to take the plunge? Game-playing is a natural computer application, and it's many people's favorite use for this electronic marvel. Here's a column to help you find gaming software that will suit your personal style, tastes, and abilities.

SWIMMING INTO A SEA OF GAMES

There is a wide array of games available for players with little or no experience. And most can be played with a minimum of instructions.

Our first two games, *Lode Runner* and *Super Boulder Dash*, can be instant fun even for rank amateurs, yet continue to give pleasure to experienced players, too. Both games resemble the popular, fast-moving, coin-operated arcade games that have been around for the past decade. Players use joysticks or the keyboard to move characters around the screen, having them perform tasks to gain points while staying out of the clutches of the computer-controlled bad guys. Not only is *Lode Runner* exciting (you grab sacks of gold from intricate mazes while avoiding guards), it also offers a built-in "construction set" that allows players to modify the program or expand it by building their own mazes. *Super Boulder Dash* (which is packaged along with the original *Boulder Dash* game) has graphics that are particularly outstanding. It's also a maze game, but here you avoid large rocks, not evil guards.

Pinball Construction Set is another program most folks learn quickly. You can play straightforward, rapidly paced pinball games, or—as the name implies—get involved with more creative elements by designing pinball tables of your own. Controlling a joystick, mouse, or the keyboard, you choose from various bumpers, flippers, traps, and other pinball pieces stored in a "parts box." This was the first program to take on the guise of an electronic erector set.

All-time favorites among gamers are the Olympic sports trilogy of *Summer Games*, *Summer Games II*, and *Winter Games*. Each presents a variety of simulated events that test your skills in track and field, gymnastics, swimming and diving, riding, shooting, skiing, and a score of other seasonal activities. Though easy to learn, these games require practice to achieve proficiency in each event. They're ideal for play alone or in groups.

For those of you seeking more challenges, yet still unwilling to digest long instruction booklets, we propose *The Cave of Time*, an introductory text/graphic adventure. The computer acts as a storyteller, spinning a tale in which you actively participate. At key points in the adventure, you are offered a number of on-screen options. Based on your answers, the computer adjusts the remainder of the story accordingly.

DIVING DEEPER FOR FUN

Programs in this next group are a bit more difficult to learn (you'll have to read at least part of the manual), yet are still ideal for newcomers—especially if you're already interested in their subjects.

Sports fans who long for a realistic game that they can play against both human and computer opponents will be thrilled with *Julius Erving* and *Larry Bird Go One-On-One*, more often just called

One-On-One. This classic basketball game gives you incredible graphics and an especially realistic feel for the sport, because these two championship players helped design it.

Sports fans who want more than joystick action should pick up a copy of *APBA Major League Players Baseball*. This exciting strategy game allows you to manage Major League teams through a game, a series, or even a whole season. A construction-set element lets you draft a dream team of your choice from existing players, and then pit them against other teams, either real or imaginary.

In *Lords of Conquest*, a challenging political/military simulation, one or two players vie for control of a country, a continent, or even the whole world. Combining the combat of *Risk* with the financial maneuverings of *Monopoly*, this highly rated program can be learned in 15 minutes, but will take many hours to master.

Moving up the ladder of complexity, we find *Ultima III*, the most simple scenario to begin with in a popular adventure series. Players create imaginary characters—such as dwarf fighters, hobbit magicians, and human priests—then guide them through fantastic adventures in a mythical land filled with gruesome monsters, castles, treasures, and other items of wonder. *Ultima* (and other role-playing games) are

ENTERTAINMENT

particularly popular among teenagers and college students, who are willing to put in 200 hours-plus to finish these heroic adventures.

Simulators attract everyone from novice to pro, but generally, the better the simulator, the more difficult it is to play. However, that's not true for *Acrojet*, a stunt-flying program that gives you control of an aerobatic plane. One to four players can participate in this program that demands precise timing, as well as excellent judgment of height and

speed, to negotiate a series of low-level aerobatic race courses.

COMING UP FOR AIR

But some people don't mind starting off game-playing with programs that are more difficult. They'll find the thrill of flying in two of the best but most difficult-to-master programs on the market: *Flight Simulator* (for the IBM PC and compatibles and the Macintosh) and *Flight Simulator II* (for most other computers). Both teach you how to fly small planes, and then put you in the cockpit of a World War I biplane to test your skills under combat conditions against German aces. The instructions for these simulators are exhaustive, although one can try to learn the ropes by simply taking a plane up and hoping for the best.

Some of the most sophisticated computer games are military simulations—programs that recreate battles, campaigns, and wars, and then let you attempt to change their historical outcomes. *The Ancient Art of War*, which puts you in command of armies from ancient times through the 19th century, is a fine introduction to this complex genre. You pit your skills against such opponents as Alexander the Great, Napoleon Bonaparte, and Genghis Khan. Move your pieces on a scrolling map, and then zoom into detailed combat where animated warriors do battle in high-resolution graphics. There's also a construction-set option that helps you create war scenarios.

Any list of games for beginners can't be complete without a text adventure from Infocom. Our selection is *The Hitchhiker's Guide to the Galaxy*, a funny, devilishly clever adaptation of the popular science-fiction book. This novel-like program consists of puzzles that must be solved in order to proceed with the tale. It's a real challenge for newcomers and requires a great deal of patience and cleverness to finish.

WHERE TO NEXT?

There are literally hundreds of titles available in the computer gaming field, of which we have selected a scant 16 for this column. To help in your continuing quest for superior entertainment software, you'll find reviews of games each month in *FAMILY COMPUTING* (see page 52 for this issue's game reviews). These feature the newest games available, all tested by gaming experts to make your recreation more pleasurable. **FC**

GAME SOFTWARE INFORMATION

Acrojet (MicroProse Software). C 64/128. \$25.

The Ancient Art of War (Broderbund Software). IBM PC/PCjr, Macintosh. \$45.

TELECOMPUTING

GENIE VERSUS COMPU SERVE

How the New Low-Cost Network Compares with the Established Leader

BY CHARLES H. GAJEWAY

Information networks for personal computers are a wonderful invention. With a modem, a telephone line, and an account with one of the major services, you have access to valuable resources that significantly increase the usefulness of your computer.

From your living room or home office, you can find electronic encyclopedias, news, financial and travel information, software, technical knowledge, and high-powered adventure games. You can converse with other people around the country and send and receive electronic mail.

The only drawback is that this power can be insidiously expensive. Many people are wary about on-line time after getting one or two heart-stopping bills.

COMPARING COSTS

Since it started service in October 1985, General Electric Information Services (a division of General Electric Corporation) has been promoting its GENIE personal computer network ([800] 638-9636) as a low-cost alternative to more widely known and used information networks. With an \$18 sign-up fee, a \$5-per-hour connect charge for either 300- or 1200-baud usage, and no monthly minimum, GENIE's price is definitely attractive. In cities where it's available, 2400-baud access is \$15 per hour. GENIE's non-

prime rates are available weekdays from 6 p.m. to 8 a.m. and for 24 hours a day on weekends and holidays.

By contrast, evening and weekend rates on CompuServe ([800] 457-8650)—the only other network with the same type of offerings—run at \$6 per hour for 300-baud access and \$12.50 per hour for 1200-baud and 2400-baud usage. The initial sign-up fee is \$39.95.

Of course, money isn't everything. The strength of a network is in its services and the number and variety of its users. In this regard, GENIE has one flaw—it's new.

Being new means it has fewer users (45,000) to talk to and glean information from. GENIE doesn't yet have the same amount of material in its data bases as a more established network such as CompuServe (with 350,000 subscribers).

And being new also means that there aren't as many access phone numbers available; if you don't live near one of the 650 cities where GENIE offers local access, you'll have to make a long-distance call to one of GENIE's access numbers. And many of these numbers carry a \$2 surcharge. Thus, in locations where a local CompuServe phone number is available, GENIE could cost more despite its lower connect rate.

NEWS AND REFERENCE

GENIE's News, References, & Financial section is a bit thin. The news is limited to a smattering of computer-related topics; there is no wire service or daily headline sum-

mary, as on CompuServe.

Reference consists solely of *Grolier's Academic American Encyclopedia*, an excellent, easy-to-use information resource that is updated four times each year. For the cost of connect time and a fee to Grolier (\$7.50 per month, \$29.95 for six months, or \$49.95 per year), you gain unlimited access to the electronic encyclopedia, which is detailed enough to support all but the most advanced high-school projects. *Grolier's Encyclopedia*, however, is also available on CompuServe.

Financial options include a stock-quotation service, which carries a surcharge of \$10 per hour. There's also a loan calculator to help figure amortization costs and the VESTOR investment-analysis service (\$10 per hour surcharge) to help manage your investment portfolio.

CompuServe offers a wider variety of news- and financial-information services. There's access to several wire services and the National Weather Service. Financial information includes a stock ticker with real-time quotes, commodity prices, and historical prices for stocks, bonds and options from 1973 to the present.

In addition, CompuServe provides access to the Standard & Poor's, Disclosure Inc., and ValueLine data bases for corporate financial reports, plus banking and brokerage services.

CB, CONFERENCES, AND ROUNDTABLES

GENIE's LiveWire is a CB Simulator (a CompuServe-coined phrase)

Contributing editor CHARLES H. GAJEWAY, author of the *Apple* column in *Machine Specifics*, can be reached on CompuServe (ID: 73357.3577) or on GENIE (ID: CGAJEWAY).

A black Hayes Smartmodem 2400 is shown from a front-facing perspective. It has a carrying handle on top. The front panel features the text "SMARTMODEM 2400" and the Hayes logo on the left. On the right, there is a row of eight red indicator lights, each with a label below it: HS, AA, CD, OH, RD, SD, TR, and MR.

CHOOSE THE NAME THAT COMMUNICATES QUALITY.

We'd like to pass along some data on why you should insist on a Hayes Smartmodem 1200™ or Smartmodem 2400.™

First and foremost, no one knows more about building reliable, high performance modems than Hayes. And no wonder. Hayes pioneered the personal computer modem a decade ago, and today is actually the de facto standard in computer communications with the widespread adoption of the Hayes Standard "AT" Command Set.

Second, Hayes has a long-standing and unwavering commitment to customer support, not just to service its products, but to serve as a resource for information, assistance, and technical advice for everyone from the home user to the corporate communications manager. Moreover, Hayes provides more than a warranty on the material and workmanship of its products. Hayes warrants they will perform as promised, as well.

Should you need further data to help you make up your mind, we offer this reassuring statistic: Year after year, more personal computer owners buy far more Hayes modems than any other kind.

And that may be because a Hayes modem is the only modem with the ability to transmit and receive data, and at the same time convey a feeling of peace of mind.

Hayes®

SAY YES TO THE FUTURE

Want to Master High School Math?

THEN YOU NEED THE MOST EFFECTIVE HIGH SCHOOL MATH SOFTWARE EVER DESIGNED

HIGH SCHOOL MATH SERIES
IBM PC / PC jr / COMMODORE 64
APPLE II SERIES

Each package in the Intelligent Tutor series is complete and self-contained. Each is designed to help students review and master basic principles and concepts, develop their problem-solving skills, and build their confidence.

ALGEBRA 1

Designed for a one-year course in elementary algebra. Comprehensive coverage of all major topic areas, including review of arithmetic; fundamental operations; solving algebraic equations; polynomials; factoring; radicals; exponents; quadratic equations; graphs; coordinate geometry; functions; word problems; etc.

GEOMETRY

Designed for a one-year course in plane geometry. Comprehensive coverage of all major topic areas, including angles; parallel lines; theorems; proofs; constructions; congruent and similar figures; figures involving triangles, circles, and parallelograms; word problems; etc.

ALGEBRA 2

Designed for a one-year course in intermediate algebra. Comprehensive coverage of all major topic areas, including review of elementary algebra; solving systems of two and three equations; functions; polynomials; complex numbers; exponents; logarithms; conics; determinants; word problems; etc.

TRIGONOMETRY & ADVANCED TOPICS

Designed for a one-year course in trigonometry and other topics taught in higher level high school math courses. Comprehensive coverage of all major topic areas, including introductory and advanced trigonometry; binomial theorem; progressions; graphs; word problems; vectors; complex numbers; probability and statistics; etc.

SAT MATH

Comprehensive coverage of the problem types and skills emphasized on the Math Section of the SAT. Permits students to take simulated SAT tests, see forecasts of their SAT scores, and see evaluations of their strengths and weaknesses. Helps students to develop their skills, and to improve their SAT scores.

And, Just Released...

TELECOMPUTING

that allows you to communicate directly with a group of on-line GENie users. Any number of people tuned in to the same CB channel can type messages to which the others can respond. GENie's LiveWire has 40 channels to CompuServe's 72 (36 on each of two bands), but they rarely get as crowded and chaotic as CompuServe's CB. I like this because it's easier to hold a conversation; on the other hand, many people like the feel of a crowded CB channel.

CB is fun, but it's addictive, and a real connect-time burner. I'm consistently shocked at how much time I've spent when I log off.

GENie's Real-Time Conference (RTC) is an electronic meeting room. Users can reserve one of 40 on-line "rooms" and a specific date and time for their discussion. Conferences can be public or private, and stenographic services are available to record the proceedings.

The various RoundTables are the home of special-interest groups (SIGs) on GENie. There are RoundTables for all the major personal computers, offering members access to software libraries, bulletin boards with messages, and conferences. Though computer RoundTables dominate the selection (the Macintosh and IBM RoundTables are the most popular services on GENie), there are a handful of groups devoted to hobbies such as scuba diving, genealogy, and photography.

CompuServe has many more forums, and they are bigger and busier than GENie's. CompuServe's larger forums are so busy, the turnaround on the message boards is very fast; if you don't check in twice a week, you may miss a response to your posted question or notice. And there are more non-computer groups than on GENie, such as the Space Forum and Work From Home Forum.

GENie's message boards are structured like reference files (named Categories) that collect and hold input on certain Topics. The messages don't scroll down the screen, as they do on CompuServe. On the other hand, GENie's system is more cumbersome to use than CompuServe's, and much less interactive—for instance, you don't reply to a person, you reply to a topic.

TRAVEL AND GAMES

GENie's travel section is one of its strongest parts. You have access to American Airlines' EAASY SABRE

reservations system to plan and reserve airline flights, hotels, and car rentals. Plus, you can access Travel-Data, a ranked guide to hotels, restaurants, and car rental agencies in more than 150 cities worldwide.

CompuServe offers the less impressive Travelshopper airline-reservation system, which doesn't allow you to make hotel- and car-rental reservations. And its Official Airline Guide Electronic Edition carries a heavy surcharge. But, as elsewhere, CompuServe's overall travel offerings far outweigh GENie's lineup.

Multiplayer games on CompuServe have been popular for some time, and the same is true on GENie. Its *Stellar Warrior* is the fourth most popular activity (after the two RoundTables and LiveWire). Main-frame games can offer a degree of complexity and speed in adventure/strategy games that is difficult to obtain on a personal computer.

While GENie has a dozen or so games, CompuServe has over 30 in six classifications. Be warned, though—games are even worse clock-burners than CB. According to a couple of advanced strategy players I know, a good round of an advanced game can absorb nearly 100 hours over the course of several months!

CHOICES

If I had to make a choice between the two services (I subscribe to both), I'd have a hard time. I agree with the comments I've heard again and again from GENie users—that GENie is a "friendlier," more "personal" network. That's partly because it's new and its users have a sense of community. In addition, the low-cost 1200-baud transmission rate helps lower the cost of downloading text and/or programs.

On the downside, GENie does not offer the broad spectrum of services—beyond its computer RoundTables—that CompuServe does. If you want to find computer-related information, download software at 1200-baud, or burn time on LiveWire or playing games, GENie can be a bargain. But if you need to use CompuServe's far-ranging services, then GENie's cost benefit is moot.

Of course, there's no reason why you can't subscribe to both services. Neither has a minimum-usage fee, so after the initial sign-up fee you pay nothing unless you go on-line. I'm very happy with both of my accounts. ☐

A disk each month delivered to you...

packed with programs for your Apple, IBM PC, C64/128 or Macintosh.

DISCOVER UPTIME. You deserve the best from your computer. Have the best and save the most with UPTIME.

We make it easy and inexpensive — a disk each month. You deserve value. At UPTIME we believe in value. That's why each month 30,000 people like you enjoy a disk packed full of programs and information.

Make life easier & get more from your computer.

Organize your life and be more productive with **home management** and **finance** programs. Have fun learning with our **educational** programs and fun relaxing with **games** and **adventures**. You will find **business**, **graphics**, **utilities** & more!

At least eight great programs on every disk.

What's the opposite of "downtime"? It's UPTIME, of course. Just imagine ... a disk each and every month, delivered right to your door and packed with programs for your micro.

Subscribe now, with our introductory offer! Satisfaction guaranteed, or your money back.

Make the very next disk yours! Fill in the coupon and return it to us, or simply call. We'll start your UPTIME subscription immediately.

NEWS, OPINIONS, QUOTES, & RUMORS ABOUT YOUR FAVORITE COMPUTER

APPLE

BY CHARLES H. GAJEWAY

Last month, I described the features and functions of several II-series expansion peripherals from Applied Engineering. This month, I'd like to discuss how they performed in my tests and what they can add to your system's capabilities. Let's begin with the memory-expansion boards, the RamFactor and the RamWorks III. Both products will accommodate up to 1 MB of expansion memory on the main board, but they are quite different in design and application.

RamWorks III (\$179-\$219; 64K or 256K) plugs into the memory/video slot in the IIe, and handles 80-column video output as well as memory expansion. (RamWorks III works exclusively on the IIe.) My test unit was equipped with the optional RGB monitor connection, which produced extremely sharp, steady images. Memory can be expanded further with piggyback boards holding 512K or 2 MB. The board is equipped with RAMdisk software, but it's the *AppleWorks* expansion software that really makes RamWorks III stand out.

After a brief installation procedure, I booted *AppleWorks* and found that my desktop had expanded from 55K to 727K! As a point of comparison, Lotus 1-2-3 provides about 440K of user memory on a 640K IBM PC.

Working with a reasonable number of *AppleWorks* files becomes intuitive and effortless. According to Applied Engineering, a variety of popular ProDOS-based software, including the *VIP Professional* spreadsheet, also will take advantage of RamWorks's features.

If RamWorks III is the IIe powerhouse, RamFactor (\$239-\$389; 256K, 512K, or 1 MB) is the versatility champ. This card works in slots 1-7, and is one of very few memory-expansion cards that offers a power backup module to create a truly useful RAMdisk. The board will work in the II Plus, IIe, IIGS, and compatibles like the Franklin and the Laser 128.

I used it to create a system that divided the extra memory between *AppleWorks* desktop expansion and RAMdisk program storage that could load *AppleWorks*, *WordPerfect*, and other large applications at eye-blink speed. RamFactor's reliable battery backup means you can leave these programs in memory even after you turn the computer off, so that they're always ready to use.

A RamFactor RAMdisk can be formatted to contain both DOS 3.3 and ProDOS files—though most of my DOS 3.3 programs wouldn't load into a RAMdisk because of copy protection. This is unfortunate because RamFactor is a natural choice for II Plus owners, who are likely to have quite a few DOS 3.3 programs.

CHARLES H. GAJEWAY can be reached on CompuServe (ID: 73357.3577) or on GEnie (ID: CGAJEWAY).

ATARI

BY JOHN J. ANDERSON

Veteran Atariian David Small has generated a lot of interest in his new product, Magic Sac—an Apple Macintosh emulator for the Atari ST. The product consists of a cartridge and software on disk, and retails for \$149 (Data Pacific, 609 E. Speer Blvd., Denver, CO 80223; [303] 733-8158). Many of you have written to ask whether Magic Sac is a good investment.

The answer is not simple. Yes, Magic Sac does work and offers some real advantages over the Macintosh itself. But it also requires some work on your part.

Macintosh Emulator. First, Magic Sac ships without the Macintosh 64K ROM sets required for it to work. You will have to acquire the genuine Macintosh ROMs—which can only be bought from an Apple dealer as part of an upgrade kit—and install them yourself. The Magic Sac documentation explicitly states that the cartridge will work only with original Macintosh ROMs.

Next, be aware that Magic Sac prevents Atari ST drives from reading

Macintosh disks. Atari STs and Macintoshes sport entirely different disk formats. So, to transport Macintosh software to the Atari, you need access to a Macintosh and a null modem cable, which is included in the package. (The null modem cable is a special serial cable that allows you to connect two machines via serial ports.) Using a Macintosh communications program (David Small recommends *FreeTerm*), you may then transmit the *System*, *Finder*, and other unprotected programs from Macintosh disks to ST disks.

MacPaint ST. Finally—though Small claims that most Macintosh software that follows Apple's programming guidelines will run on the ST—the only way to really know what runs and what will not run is to try it. Copy-protected software, of course, will not run. In many cases, only earlier versions of certain programs run bug-free; for example *MacWrite* version 2.2 runs well, but not newer revisions. *MacPaint* version 1.5 runs too, as do many other packages.

But several titles currently won't run under Mac emulation on the ST. For instance, Small points out that any Macintosh software that tries to find a particular memory location on the ST will error out—because on the ST that location is in ROM. In addition, Magic Sac does not support any Macintosh sound functions. Small recommends that the sound setting on the control panel always be set to zero.

While making your ST compatible with the Macintosh remains attractive, in practice it's a bit dicey and bound to stay that way for some time. But there are some advantages to the system. For example, the ST's standard parallel interface (the Macintosh has a non-standard serial interface) allows hookup to several printers. And although system overhead will not allow a 520ST to emulate a 512K Mac, a 1040ST can be configured as an 896K Mac. (Perhaps we could call it a SuperFat Macintosh.) When you consider that the 1040ST retails for less than \$1,000 and Magic Sac for less than

\$200 (including separate ROM purchase), that represents a bargain worth serious thought.

Multi-Purpose Modem. Thanks to Steve Godun, of Piscataway, New Jersey, for pointing out that the Atari SX212 modem has connections for the Atari XE/XL series, the Atari ST, and any computer with an RS-232C serial port. In our March issue ("Modems in the Mainstream") we listed the modem as working only on the ST. However, to use the modem, you will have to buy communications software for the ST or the XE.

JOHN ANDERSON can be reached on CompuServe (ID: 76703.654).

COMMODORE

BY SHAY ADDAMS

Laser printing—once available only to Macintosh and IBM-compatible owners—is now within the reach of anyone with a C 64. And you don't even need to spend thousands of dollars for a printer that generates the near-typeset quality text and smooth graphics delivered by a laser printer. Subscribers to the QuantumLink on-line network can upload geoWrite files (with graphics and text) to Berkeley Softworks ([415] 644-0883). The company then prints your files on an Apple LaserWriter printer and mails you the hard copy. The charge is \$3 for the first page and \$1 for each additional page.

With the overlay option you can design multiple-column pages. I've already seen one newsletter (*Kids Computer News*) that is prepared with this service.

If you do enough laser printing to justify buying your own machine, printer drivers for GEOS let you run the Apple LaserWriter and Hewlett Packard LaserJet—but not Okidata's LASERLINE 6, as I incorrectly stated in the March column. For the Okidata, you need an interface; then most 64/128 software can print laser copy. Parallel and serial interfaces are available from Omnitronix ([206] 624-4985; \$60-\$80). The Laserline 6 is also PC compatible, so it works with Commodore's PC 10-1 and 2.

Rock 'N Roll. Electronic Arts ([415] 571-7171) publishes a slick magazine called *Deluxe News*, full of features and tips on *DeluxePaint*, *Deluxe Music Construction Set*, *DeluxeVideo* and other Amiga programs. The magazine is distributed

to registered owners of the *Deluxe* programs. Electronic Arts also has released supplemental music software for the Amiga: *It's Only Rock 'N Roll* (\$29.95) provides 18 digitized instruments plus 40 prerecorded rock songs to use with *Deluxe Music Construction Set*, *Instant Music*, and *DeluxeVideo*.

Activision also has something new for Amiga musicians. *The Music Studio* ([415] 960-0410; \$59.95) enables you to create 15-channel music and print sheet music. It has 15 instruments and a synthesizer that you can use to invent new instruments. Files are IFF compatible, so they can be played by other IFF software. The 64/128 version is \$34.95.

Plus 4 Update. Irene Mogg, of Sonoma, California, tried the toll-free number of the Tri Micro Plus Exchange Users Group ([800] 826-4859) for information on the C 16 and Plus 4 but couldn't reach it from that state. The group's address is P.O. Box 11300, Santa Ana, California 92711; the California number is (714) 549-1902.

SHAY ADDAMS is editor and publisher of *Questbusters*, an adventure-game newsletter. He can be reached on CompuServe (ID: 72267.601) or on QuantumLink (ID: JBCALMER).

IBM

BY HENRY BEECHHOLD

IBM, faced with surprisingly stiff competition in the laptop market from Toshiba, Zenith, and NEC, has made some changes in its PC Convertible portable. The new computer—with 256K RAM, two 3.5-inch disk drives, and an 80 x 25 screen that flips up into viewing position—sells for \$1,995.

The biggest change is in the liquid crystal display (LCD) screen. New super-twist technology gives the screen greater contrast and, thus, better readability as evidenced in the Toshiba 1100 Plus and others. A new LCD screen can be added to old Convertibles for \$250.

Second, the internal modem—that IBM offers as an option—is now Hayes compatible and sells for \$450. Previously, the IBM internal modem used its own commands and required special software. Finally, the old Convertible could not be expanded beyond 512K; the enhanced computer can be expanded to 640K.

Software Carousel. Switcher for the

ZEPHYR'S EXCLUSIVE SOFTWARE

Good Software! Great Prices!

For YOUR

APPLE II+/IIe/IIc IBM PC/XT/JR
Pick the Ones YOU Want:

FINANCER™—10 most needed financial calculations in easy to use package. Menu selectable for: amortization schedule, present values, future values, simple & compound interest, installment loan, days between dates, & more. Output to screen or printer. "FINANCER is best"—G.W., Montana \$19.95

MUSICMAN™—Compose music on screen, placing notes, rests, sharps, flats on musical staff. Vary key, pitch, tempo & legato to perfect your music. Save your compositions to disk to replay or revise later. Comes with musical selections. 80 column display. \$29.95

ASTROSTELL™—Learn the constellation using your computer, all 88 included. Four levels star brightness simulate sky on screen. Gives star names, positions of galaxies, nebula, etc., plus lore & observing tips. 80 column screen. "A Perfect Delight"—Prof. M.F., Minnesota. \$29.95

STATCALC™—Key statistical functions for student or experienced user. Includes correlation & regression, normal, T, Poisson, binomial, Chi-square, distributions, data handling for sorts, mean, standard deviation, range, median. Save data to disk. Manual explains statistics and program use with examples. \$39.95

HOROSCOPICS™—For your birthdate and time the exact sky conditions are calculated and horoscope chart printed out, with zodiac, sun, moon & all planets. Includes astrological reading, sun & moon sign, ascendant, conjunctions & oppositions. \$24.95

BIO-DATA™—Calculates Biorhythms for any time period you specify and displays on screen or to printer. For your birthdate gives celestial longitude of sun and your astrological sign. Determines Julian Day #, days since birth & day of week for birth. \$19.95

VOCABULATOR™—Improve your vocabulary at selectable skill level, from high school to sequepidian. Use multiple choice or quick review mode. Add words you want included. "Recommended: Excellent Program"—Electronic Learning Mag \$29.95

SUPERCAT™—Professional level cataloging for up to 5,000 books per directory with hard disk or 1000 per floppy (400 for Apple). Multiple subjects & authors, call #, title, publisher, etc., plus fields to customize. Print 3x5 index cards & reports in various formats. Sort and retrieve data by any field. Fast and easy to use. \$49.95

CATMAN™—Catalog your books, records, tapes with ease. Store author, title, and subject for up to 3000 item per floppy (1500 for Apple). Use search options to get listings on screen or printer. Your choice if full power of Supercat not needed. \$19.95

HEADLINER™—Print banners and signs on any 80 or 132 column printer in letters up to 13" high (smaller sizes, too). Any length headline. Great for parties, kids, offices, stores. Get your message across! On PC MAG Holiday '85 Wish List. \$19.95

MACHINE SPECIFICS

Macintosh lets you load two or more programs into memory and quickly switch between them. *Software Carousel* (\$59.95), a new program for IBM PC and compatibles, lets you do the same. Each program that is loaded into memory is like a slide held in a carousel on a slide projector. It's conceivable that without ever rebooting your computer you could hop among word processor, data base, spreadsheet, and other programs you may want to use.

You can set up specific amounts of memory for each program you want in RAM at once. Each partition is given its own name, which is associated with a function key. Thus, F1 might stand for (and switch you to) *MyWord*; F2, *MyCalc*; and so forth. Formerly conflicting memory-resident programs, like *SideKick* and *SuperKey*, can now live comfortably together.

You can change your setup at any time. Say you've set up your word processor for 128K but you discover that things are getting tight. Just call up the configuration menu and change the value.

If you use your computer intensively, *Software Carousel* may pay for itself in speed and convenience before the week is out. (SoftLogic Solutions, Inc., 530 Chestnut Street, Manchester, NH 03101; [800] 272-9900; [603] 627-9900 in New Hampshire.)

HENRY BEECHHOLD is the author of *The Brady Guide to Microcomputer Troubleshooting & Maintenance* (Simon & Schuster).

MS-DOS

BY STEVE MORGENSTERN

Lotus Development Corp. has recently taken measures to protect 1-2-3's position as the undisputed sales leader among spreadsheets.

First, Lotus filed a lawsuit against two companies offering inexpensive 1-2-3 clones. Both of the competitors under fire (*VP-Planner* from Paperback Software and *Twin* from Mosaic Software) added significant features to the Lotus program. Besides, where would Lotus be if the makers of *VisiCalc*—the original electronic spreadsheet—had taken legal action based on the enormous debt 1-2-3 owes to their program?

HAL. On a more positive note, Lotus has tried to improve 1-2-3 with the introduction of *HAL* (\$150), an

add-on program. *HAL* is an absolutely ingenious piece of work. It provides a simpler way to enter 1-2-3 commands and several new commands as well, all of which bring unique ease-of-use features to the market leader. Now that's the way to beat up on the competition.

Whether you're a beginner or a seasoned 1-2-3 veteran, *HAL* is well worth having.

Many *HAL* requests are convenient shortcuts. For example, if you want to set up a spreadsheet with the names of the months across the top, you can just put your cursor in the first cell and instruct *HAL* to "enter jan to dec across." Want figures in column C that are 10 percent higher than the figures in Column B? Tell *HAL* to "project col b by 10 percent." Want to see a fast graph of the information in your spreadsheet? Tell *HAL* "graph this" and quickly you'll see a bar graph.

In addition to automating functions which would otherwise require one-cell-at-a-time trips through 1-2-3's layers of menus, *HAL* includes an extremely valuable *UNDO* command. *UNDO* lets you reverse your last action, whatever it was. *HAL* has the only decent *UNDO* function I've ever seen in a spreadsheet program, and it's a potential life-saver.

HAL is not like a text-adventure game that lets you type in your own commands and then executes them. *HAL* requests have their own definite words and structures, and you must use them correctly to advance. The commands are logical, though, and they streamline Lotus 1-2-3 so much it seems like a whole new product.

Educate Me. A reader wrote asking for recommendations for educational software (for 7-10-year-olds) that runs on an IBM compatible *without* a color graphics board or color monitor. There isn't much that runs on a monochrome monitor, but the highly-acclaimed Davidson & Associates ([213] 534-4070) educational software does.

Clone Wars. *InfoWorld*, a weekly trade paper covering the computer industry, recently quoted Forrester Research on IBM's slipping computer sales: Big Blue accounted for 58 percent of U.S. shipments in 1985, but the clones turned the tables in 1986 with a projected 58 percent share.

STEVE MORGENSTERN can be reached on CompuServe (ID: 72545.606).

TANDY

BY STEPHEN MILLER

The first of the Tandy-distributed CoCo 3 software, running under OS-9 Level II, has finally started to arrive. Epyx's *Rogue* (Cat No. 26-3297; \$29.95) has been put in the CoCo 3 format, as has the Epyx/Lucasfilm *Koronis Rift* (Cat. No. 26-3298; \$29.95). Both have been available for other computers.

The color, sound, and animation on *Rift* are nothing short of wonderful—at least on the Tandy CM-8 RGB monitor. However, I found that the game really doesn't move fast enough to classify as an arcade shoot-'em-up, and there are not enough puzzles to solve to be classed as a first-rate adventure. The sound, color, and the cute robots, however, may be enough to keep young kids interested.

Rogue, on the other hand, is short on color, graphics, sound, and animation, but it is much more of a challenge. I found myself playing it at length. Now, if I can just keep the leprechaun from stealing my gold....

Beginners' Tutorials. Digital Learning Systems has come out with tutoring programs for the Tandy 1000s: *The FUNDamentals of the EX* (Cat. No. 25-1167; \$29.95) and *The FUNDamentals of the SX* (Cat. No. 25-1166; \$29.95). I love the style of the programs. They provide an entertaining and painless—yet informative—introduction to both the EX and SX, and the basics of computer use. I especially liked the drawing program used to demonstrate the FUNCTION keys in the EX version.

EX Expansion. To expand the EX, you must use Tandy PLUS expansion boards. In order to use more than one expansion board, you first must install the Memory Plus Expansion Adapter (Cat. No. 25-1062; \$129.95). It increases memory from 256K to 384K, and has slots for two additional boards. The additional boards *must* be PLUS boards; third-party expansion boards will not fit. You can also add PLUS boards to the SX (or any other IBM-compatible computer) if you first install a PLUS Upgrade Adapter Board (Cat. No. 25-1016; \$14.95).

A Short CoCo Leash. A couple of CoCo 3 owners were complaining (on a bulletin board I frequent) about the short cable furnished with

the CM-8 RGBI monitor. The short leash makes it impossible to place the monitor any distance from the computer. That problem can be solved by ordering a six-foot monitor extension cable from Spectrum Projects (\$19.95; P.O. Box 264, Howard Beach, New York).

STEPHEN MILLER, former computer columnist for UPI, is a freelance writer and computer consultant.

ORPHANS

BY PATRICK SPERA

Triton Products Company (P.O. Box 8123, San Francisco, CA 94128; [800] 227-6900) has announced a new package that will allow TI-99/4A users to use their computers as keyboards for an IBM compatible. The package (\$499) includes a bridge box and a 256K IBM PC XT compatible computer, but no monitor or keyboard. Now, you can either use the TI-99/4A alone, or use it as a keyboard for the IBM compatible.

Inside the expansion box is a Turbo XT. It runs at two speeds and has 256K (expandable to 640K), a parallel port, a color graphics adapter, disk controller card, and disk drive.

The XT is accessed by a BASIC command, CALL XT. Returning to 4A control is done by holding down the FCTN, CTRL, and RETURN keys together. This system seems fine if you want to keep using your TI; but if you just want an IBM compatible, you might be better off buying a separate unit.

The two machines can run independently. You could simultaneously run a data-base program on your IBM and play a game on the TI. A bad point to this is that you will not be able to access the XT disk drives with TI BASIC.

TS 2068 Soundesign. RMG Enterprises (1419 1/2 7th St., Oregon City, OR 97045; [503] 655-7484), has announced a program that allows you to design and edit musical or sound effects for use on your TS 2068. *Soundesign 2068* (\$14.95 plus shipping) is menu-driven, and only three keys are needed to design a sound effect, which can then be used in your BASIC programs.

PATRICK SPERA can be reached on CompuServe (ID: 76703.4350), and is administrator of the Computer Club Forum (GO CLUB), a home for orphaned-computer owners.

With the AMSTRAD PC1512, everything is included.

At last! A powerful IBM-compatible personal computer with the popular "MOUSE" and software, all at an affordable price. No add-ons needed, just plug it in and go!

Here's what you get:

Monochrome monitor, paper white with 16 gray levels – 360kb double sided floppy disk drive – 512k memory – 8086 processor (8mhz) – "mouse" – PC compatible keyboard – Joystick port – Parallel and Serial ports – 3 full sized PC compatible expansion slots – Complete user instructions.

"FREE" Software (\$500 retail value)

Microsoft MSDOS V3.2 operating system, Digital Research DOS PLUS operating system, Digital Research "GEM Desktop," "GEM Paint," "GEM Doodle," Locomotive Software "Basic 2" and very detailed, clearly presented user manual.

Optional Features

Second Floppy disk drive or 20 MB hard drive, RGB Color Monitor, 16 colors.

It's never been easier to get going on your own personal computer. It's what you've been waiting for.

The AMSTRAD PC1512 is available now at better Computer Dealers Nationwide. If your dealer doesn't have them yet, write or call and we'll tell you where you can buy one.

Unit pictured with optional RGB Color Monitor.

BUYER'S GUIDE TO

COMPUTERS

BY DAVID HALLERMAN

CAPSULE
REVIEWS
OF 17
POPULAR
MODELS

I'm in the midst of shopping for my second computer, and even though (or maybe because) I work with them all the time, it's a tough decision, same as when I bought my first machine. I want to get one that's right for *me*. At the same time, with more computing power available at less cost than ever before, I almost can't go wrong. Any type of computer will suit me and serve me well.

As I weigh the pros and cons of various models, I realize that any buying decision is preceded by a series of questions and answers. So if you find yourself in the computer marketplace with me, interrogate yourself! What do you want to do? How are your needs likely to change? What can you afford? How do you like to work or play or learn? Do you want a machine from an older line (like an Apple IIe or the Commodore 128) that has software for all interests, particularly educational programs for kids? Or are you entranced by the newer mouse-and-icon based computers—like the Apple IIGS, Macintosh, Amiga, or Atari ST—with their superior graphics and sound? Do you need the business-standard software of an IBM PC or compatible?

You can begin to answer these questions with this Buyer's Guide to Computers. Each system included here is one we can recommend—to the right person. Using the concise specifications, you can make a point-by-point comparison of such vital data as memory, colors, sound, graphics resolution, and bundled software or included hardware. In the remarks that follow the specs, you can discern the machine's strengths and weaknesses.

DAVID HALLERMAN is a senior editor for FAMILY COMPUTING.

PHOTOGRAPH BY PAUL DINOCENZO

HOW TO READ THE SPECS

Here's an explanation of the specifications for each computer, which is listed in its most commonly sold configuration. As with cars, you can buy computers with different accessories, so use our specs as a general guide.

List price: All prices are the manufacturer's suggested retail. However, most computers are discounted or "bundled" with extra peripherals. It pays to shop.

Warranty: Coverage ranges from 90 days to 15 months. In some cases, you can pay extra for an extended warranty or a service contract.

Memory: Measured in kilobytes (each K equals 1,024 characters) and megabytes (each MB equals 1,000K), with both standard and manufacturer's maximum configurations given. (One double-spaced page equals about 2K.) The more memory, the merrier. A larger memory allows a computer to run programs that are more powerful and easier to use. More memory also allows you to have more programs or data on your desktop at once, and leaves room for memory-resident programs—such as the desk accessory *Sidekick* or an electronic thesaurus.

For the Commodore 128 and the Apple IIe/IIc, 128K is standard memory, and it should be enough for most applications. For the Apple IIgs and the IBM PC/XT and clones, 256K is the lowest acceptable memory; if you can afford it, try to start off with at least 512K. The Macintosh, Amiga, and Atari ST demand at least 512K of RAM, and one megabyte is more desirable.

Slots: Slots accept add-on (or plug-in) circuit boards, which are the pathways to expanding a computer. You can add modems, hard-disk drives, speech synthesizers, etc. In general, a computer with slots is more easily expandable than one without. And more slots are generally desirable—though computers that have all the necessary interfaces built-in don't require as many slots, and slots can add to the size of a machine.

Ports/interfaces: Ports and/or interfaces (the terms are often used interchangeably) allow you to connect external devices to your computer. For instance, a parallel port is generally used to connect a printer, and a serial port is used to connect a modem or printer. Some computers have more exotic ports, such as the SCSI hard-disk drive port on the Macintosh and the MIDI (musical instrument digital interface) in/out ports on the Atari ST that allow you to connect a synthesizer.

Video interface: Almost all computers come with some kind of connection for a monitor or television, and most offer the potential for upgrades to sharper monitors. A television is okay primarily for games or educational software, but not for work with words or numbers. A composite video connection lets you con-

nect monochrome monitors (good for working with words and numbers) or composite color monitors. Some computers offer an RGB (Red-Green-Blue) interface for connecting a high-resolution color monitor. There are two types of RGB interfaces (and matching monitors): digital RGB and analog RGB. Analog is the more colorful of the two, delivering up to 4,096 colors.

The IBM PC and compatibles connect to the monitor somewhat differently; read the introduction to the MS-DOS section for details.

Hardware included: To make the computer work, you'll need a monitor and at least one disk drive (two are preferable for business applications). Other items listed include numeric keypads (set up like a calculator), a mouse, and battery-powered clock/calendars.

Software included: Almost all computer systems include the disk operating system (DOS) and a version of BASIC. If not, you'll have to buy DOS, because you can't begin to compute without it. Some systems include on-disk tutorials or productivity programs; the advantage here is that you can take the computer home and start using it right away.

Text: Measured in characters by lines. For example, an 80-column by 25-line display is standard for word processing and spreadsheet work. On older computers, a 40-column by 25-line display is standard as well. On graphics-oriented computers, such as the Macintosh, the number of characters depends on the size of the type, which can vary.

Colors: Indicates maximum number of colors available for graphics or text (in parentheses), although all available colors cannot be displayed at the same time in maximum resolution. Remember that colors aren't only for games or educational packages; judicious use of color in word processors, data bases, or spreadsheets (such as Lotus 1-2-3) can ease eyestrain and increase productivity.

Graphics resolution: Measured in pixels (dots on the screen), horizontal by vertical. The more pixels, the sharper and more detailed the display. We have listed maximum resolution.

Sound: Measured in number of voices (or channels) of sound that can be heard at one time. Stereo or monophonic (mono) output is also noted.

Other models: Notes other models sold by same manufacturer, with a brief rundown of the specs.

Remarks: In looking at each computer's strengths and drawbacks, I've assumed that you're buying a new computer. What is true about a computer's standing in today's marketplace might not have been true in the past.

APPLE IIe

List price: \$1,257

Warranty: 90 days

Memory: 128K/1MB

Slots: Eight

Supplied ports/interfaces: Joystick, disk drive, cassette drive

Video interfaces: Composite

Hardware included: One external 5.25-inch disk drive (143K), monochrome monitor, extended 80-column display card, numeric keypad

Software included: ProDOS, BASIC, tutorials

Text: 40 x 24, 80 x 24

Colors: 16

Graphics resolution: 560 x 192

Sound: One channel, mono

Other models: Apple IIc (\$940); 128K/1MB. Added ports include mouse, two serial, audio with volume control. No slots.

Remarks: The IIe is reliable and time-tested (even though Apple backs it with only a 90-day warranty) and runs a wealth of software—for everyone from toddlers to small-business people. However, if you want to run some of the same programs used in most offices across America, you probably should be shopping for an IBM PC or compatible. The IIe's main drawback is that it costs way more than some computers with greater power and speed (e.g., Atari 520ST and many PC clones). In addition, you'll

have to buy circuit boards to add parallel and serial interfaces (about \$100 each), to view graphics in dazzling colors, or to hear multiple-voice stereo sound. On the other hand, the beauty of a computer with slots is that you can make it do just about anything you want. The recently revamped IIe is now a pale gray, and the new keyboard includes an 18-key numeric pad. The keyboard matches the IIgs's, so if you upgrade later to that more powerful machine, your typing fingers will be ready.

APPLE IIgs

List price: \$1,398
Warranty: 90 days
Memory: 256K/8MB
Slots: Eight
Supplied ports/interfaces: Two serial, disk drive (5.25- and 3.5-inch), AppleTalk local-area network, keyboard/mouse/joystick, audio
Video interfaces: Composite, analog RGB

Hardware included: One external 3.5-inch disk drive (800K), mouse, battery-powered clock/calendar
Software included: ProDOS, BASIC
Text: 40 x 24, 80 x 24
Colors: 4,096 (16 text)
Graphics resolution: 640 x 200
Sound: 15-channel synthesizer, mono
Other models: None

Remarks: This latest Apple II could be a champion—but there's also a chance we might someday say, "It coulda been a contender." Powerful hardware without a strong base of supporting software does not the best system make. While the IIgs runs most of the existing IIe/IIc programs, just a handful of programs take advantage of the IIgs's special graphics and sound. I don't doubt that the software will come, but until then, you have a more expensive, but faster (2.5 times faster) IIe with a detached keyboard. Should the promise be fulfilled, you'll have an audio/visual delight. Musicians will love the 15-voice Ensoniq chip (easily converted to stereo with a \$60 board from MDIdeas, [415] 573-0580). Artists and others will appreciate the rich palette of 4,096 hues (although a 200-pixel vertical resolution is not sharp

enough to do justice to these colors). When combined with add-ons such as a color digitizer that loads photographic images into the computer, the machine may be useful for desktop publishing. Business people and researchers with masses of data will want a high-speed, SCSI interface (available later this year on a plug-in circuit board), so they can add a hard-disk drive. With enough built-in ports to handle the common interfacing (such as printer and modem), the IIgs's eight open slots promise room for more fascinating add-ons. (And almost all Apple IIe circuit boards will work on the IIgs, in case you've built up a collection over the years.) All this power, of course, costs money—but you have to balance that against the ability to continually expand the machine and keep up with state-of-the-art add-ons.

MACINTOSH PLUS (APPLE)

List price: \$2,199
Warranty: 90 days
Memory: 1MB/4MB
Slots: None
Supplied ports/interfaces: Two serial, disk drive, SCSI (hard drive), mouse, AppleTalk local-area network, audio
Video interfaces: Not applicable
Hardware included: One internal 3.5-inch disk drive (800K), monochrome monitor, mouse, numeric keypad, battery-powered clock/calendar
Software included: Finder, desk accessories, utilities

Text: Varies with size of type
Colors: Black and white
Graphics resolution: 512 x 324
Sound: Four channels, mono
Other models: Macintosh 512K (\$1,699); 512K/1MB does not include SCSI port, numeric keypad. Macintosh SE (\$2,898) has monochrome monitor, two internal 800K disk drives, and one slot. Macintosh II (\$5,498) has one 800K disk drive, one internal 40-MB hard-disk drive, no monitor.

Remarks: People have extreme reactions to the Macintosh. Some say the screen is too small (only 9 inches diagonally), while others claim the Mac has the clearest screen display they've ever seen. Some people miss the color, but many don't care. Some think the mouse is silly, others love it. More and more, however, people are agreeing that the Macintosh Plus—with its megabyte of memory, hard-disk drive port, and growing body of sophisticated software—is a machine ready for work. The latest and more expensive Macs, the SE and the II (see *New Hardware in the May issue*), promise to take on even greater business bur-

dens. Because practically all software works the same way—using the powerful built-in ROM routines and the simple point-and-click operating style—many think the Macintosh is simpler to use than MS-DOS computers. (Because the machine does so much internal processing, however, it can operate slower than MS-DOS computers.) Combined with the LaserWriter printer, the Macintosh is the premier system for desktop publishing—composing and laying out newsletters and brochures on-screen. The Macintosh also has a good base of entertainment software, though it's weak in the educational arena.

ATARI 520ST

List price: \$799
Warranty: 90 days
Memory: 512K/1MB
Slots: None
Supplied ports/interfaces: Serial, parallel, disk drive, DMA (hard drive), MIDI in/out, two mouse/joystick, cartridge
Video interfaces: TV, monochrome/color analog RGB
Hardware included: One external 3.5-inch disk drive (360K), monochrome monitor, mouse, numeric keypad, external power supply

Software included: GEM, TOS, desk accessories
Text: 80 x 25
Colors: 512
Graphics resolution: 640 x 200 (color), 640 x 400 (monochrome)
Sound: Three channels, mono
Other models: Atari 520ST (\$999), with RGB color monitor. Atari 1040ST (\$899), 1 MB. Includes one internal 3.5-inch drive (720K), monochrome monitor, and internal power supply. With RGB monitor (\$1,099).

Remarks: It's almost two years old now, and the bang-per-buck on the ST is still quite remarkable, especially when you shop around. (I've seen ads from 47th Street Photo in New York City, a big mail-order company, promoting a 520ST for \$495.) The ST comes with a mouse, and all software uses the effortless point-and-click operating style. The color monitor produces dazzling displays. The downside to the ST is the marginal availability of software—relative to the Macintosh or MS-DOS compatibles, for

instance. While there's certainly enough ST software to do just about anything, there's still no word processor (like *XyWrite III* for the IBM) or spreadsheet (like *Excel* on the Macintosh) that takes full advantage of the ST's power—so it's probably not the best bet for users who need immediate power. Musicians, by contrast, particularly like the MIDI ports, which allow direct connection of high-powered synthesizers. The ST is for them—and for others with champagne tastes and a beer budget.

COMMODORE 128

List price: \$349
Warranty: 90 days
Memory: 128K/640K
Slots: None
Supplied ports/interfaces: Disk drive, cartridge, two joystick/mouse, user expansion
Video interfaces: TV, composite, digital RGB
Hardware included: Numeric keypad
Software included: DOS and CP/M (with disk drive), BASIC, tutorial
Text: 40 x 25, 80 x 25

Colors: 16
Graphics resolution: 320 x 200
Sound: Three channel (with special sound chip), mono
Other models: Commodore 64C (\$199); 64K. Comes with GEOS, GEOWrite, GEOPaint, QuantumLink, MECC (educational) software. Does not include RGB video, 80 x 25 text, numeric keypad, CP/M.

Remarks: The C 128 is an upgraded version of the long-playing C 64. With 128K, an 80-column display, and a numeric keypad, it's a much better machine for serious tasks. However, to get the full effect of the screen display, you'll need to buy a high-res RGB monitor, which adds to the original purchase price. The C 128 has the same super sound as the C 64 and runs all C 64 software, which is plentiful. (In general, both C 128 and C 64 software is less expensive than software for the Apple or IBM.) The CP/M disk operating system comes with the optimal 1571 disk drive, allowing you to run a number of high-powered (but

older) business programs on the C 128. But if your budget is tight, or you're looking for a startup computer for kids, the C 64 might be a better pick. The latest C 64C model comes bundled with GEOS, which can be used with a mouse to give you Macintosh-like, point-and-click control of the computer. Also included are the GEOS word processor and paint program. The Commodore 1541 disk drive is slower than molasses, which makes kids fidget (however, you can add a disk-drive speed-up cartridge, such as *Fast Load* from Epyx); alternatively, you can use cartridge-based software, which is less expensive and faster.

AMIGA 2000 (COMMODORE)

List price: \$1,495
Warranty: 90 days
Memory: 1MB/9MB
Slots: Nine
Supplied ports/interfaces: Serial, parallel, disk drive, two mouse/joystick/lightpen, two audio
Video interfaces: Analog RGB
Hardware included: One internal 3.5-inch disk drive (880K), mouse, numeric keypad, battery-powered clock/calendar

Software included: AmigaDOS, Workbench, AmigaBASIC
Text: 60 x 25, 80 x 25
Colors: 4,096
Graphics resolution: 640 x 400
Sound: Four channel, stereo
Other models: Amiga 500 (\$649); 512K/9MB. With one internal 3.5-inch disk drive (880K), integral keyboard, and Systembus Expansion interface; clock/calendar optional.

Remarks: Both new Amiga computers, the expandable 2000 and the one-piece 500, promise to be good machines. (However, we have yet to see or test production models.) Both come with a mouse and use a point-and-click operating system. Kickstart, the startup program that used to be on disk, is now built into ROM, so there's less preamble when booting up. Superb graphics and sound make the 500 a great computer if you want to explore the growing areas of "desktop video" and music production at relatively little cost. On both Amigas, with the right software and additional devices such as Genlock (which captures and lines up video images on screen), you can combine computer graphics with photographic and video images and mix them on videotape. Adding music and sound effects to your videos is another Amiga strength, with its realistic four-voice output. All types of programs—especially games and educational

programs—can be enhanced by the Amiga's built-in speech capability as well. If you need MS-DOS compatibility, the 2000 (with 9 slots) has room for the Amiga Bridge Board (\$500) that makes the Amiga function like a PC/XT. You can even have an IBM-compatible program run in one window at the same time an Amiga program runs in another (multitasking). With all the power, options, and sheer newness, the Amiga may not be the best choice for first-time computer buyers who need a straight and simple path to productivity. There's less software available for it than for an MS-DOS machine or a Macintosh, and in some standard categories (such as word processors, data bases, and spreadsheets), what's available is generally less powerful. But for those more experienced, or those ready to ride the crest of the wave, both Amiga computers promise a lot of audio-visual excitement.

MANUFACTURERS' PHONE NUMBERS

Amstrad: (214) 297-4898; **Apple:** (408) 973-2222; **Atari:** (408) 745-2000; **AT&T:** (800) 247-1212; **Blue Chip Electronics:** (602) 961-1485; **Commodore:** (215) 436-4200; **Compaq:** (713) 370-0412; **ComputerLand:** (415) 487-5000; **Epson America, Inc.:** (800) 421-5426; **Fountain:** (201) 563-4800; **Franklin Computer:** (609) 488-0600; **IBM Corporation:** (800) IBM-2468; **Kaypro Corp.:** (619) 481-4300;

TANDY COLOR COMPUTER 3

List price: \$220
Warranty: 90 days
Memory: 128K/512K
Slots: None
Supplied ports/interfaces: Serial, two joystick, disk drive, cassette, cartridge, audio
Video interfaces: TV, composite, analog RGB

Hardware included: None
Software included: Color Extended BASIC
Text: 32 x 16, 40 x 24, 80 x 24
Colors: 64
Graphics resolution: 640 x 192
Sound: One channel, mono
Other models: Color Computer 2 (\$100), with 32 x 16 text display, 64K, and TV connections only.

Remarks: The new Color Computer 3 improves on the CoCo 2 in a number of ways. Significant additions include an analog RGB interface that gives you up to 64 high-resolution colors, when matched with Tandy's CM-8 RGB monitor (\$300). At the same time, you can use a TV for display, which makes a fine system for young kids. The standard 128K memory, along with an 80 x 24 text display (RGB or high-res monochrome monitor needed), suggests the ability to run sophisticated software (once you add a disk drive for \$300). And the sophisticated OS-9 Level 2 oper-

ating system lets you run two or more programs at once (multi-tasking), a powerful attribute that only the Amiga can match. High-level software has been slow in coming, but while you wait you can use most of the software and hardware that works with the older CoCo 2. However, when you compare the availability of CoCo software to computers in a similar price range (such as the C 128 or Apple IIc), you'll probably find more programs for those other machines. But for sheer number of service outlets, you can't do better than the Radio Shack chain.

IBM (MS-DOS) COMPATIBLES

Why get an IBM PC or compatible rather than another type of computer? Probably because you want a productivity workhorse at a good price or because you need to run a program at home that you use at the office. With the growth of educational and entertainment software for the compatibles, an IBM compatible can be a good general-purpose machine, too. Just don't expect the great color graphics or quality sound found in newer computers, such as the Amiga or Atari ST, without large outlays of cash for extra peripherals.

One of the most confusing things that confronts the first-time IBM-compatible shopper is the number of different video interfaces. And since different software requires different interfaces and monitors, it's important to know what you want to do with the machine. For instance, most color software (mostly games and educational packages) requires a color graphics adapter and a color monitor; and some monochrome software, such as Lotus 1-2-3, requires a monochrome graphics adapter and a monochrome monitor.

Video interfaces: The most common video connections are: IBM monochrome (640 x 350 resolution, text only); Hercules monochrome graphics (720 x 348 resolution; some PCs emulate the video standard set by the Hercules company); CGA (color graphics adapter; 4 colors, 640 x 200 maximum resolution); and

EGA (enhanced graphics adapter; 16 colors, 640 x 350 maximum resolution). Also note that your monitor must be compatible with the video interface; for instance, not all color monitors can take advantage of the EGA's richer colors and sharper text.

Speed: While a microprocessor's speed can be measured in megahertz (MHz), it's only fair to make relative judgments of speed within a single type of computer, such as MS-DOS compatibles. The basic PC speed is 4.77 MHz, but you'll find many with a second, higher speed of 7.16 or 8.0 MHz. Higher-class PC/ATs run even faster. In any case, greater speed is almost always welcome, since it makes many computing tasks (such as sorting lists, recalculating spreadsheets, scrolling through documents, or generating complex graphics) take much less time. With dual-speed PCs, you'll most likely use the slower speed solely for most games and some educational programs.

The class of machines reviewed here is IBM PC/PC XT and compatibles. The faster and more powerful IBM PC/AT and compatibles will be considered in an upcoming Home Office section. Other major brands not reviewed here include AT&T, Compaq, Computerland, Franklin, Fountain, Victor, Zenith, and Sperry. As PCs become more generic, mail-order becomes another way to buy. Noteworthy brands here include PC's Limited, PC Network, and Wells American Corp.

IBM PC/XT

List price: \$2,295
Warranty: 90 days
Memory: 256K/640K
Speed: 4.77 MHz
Slots: Eight
Supplied ports/interfaces: None
Video interfaces: None
Hardware included: Two internal 5.25-inch disk drives (360K), numeric keypad
Software included: IBM-DOS, BASIC (\$95 extra)

Text: 80 x 25
Colors: 16 (with CGA)
Graphics resolution: 640 x 200 (with CGA)
Sound: One channel, mono
Other models: IBM PC/AT (\$5,295); 512K/3MB; includes one internal floppy disk drive (1.2MB) and 30Mb hard-disk drive; speed is 8 MHz; one-year warranty

Remarks: Why buy an IBM PC/XT instead of one of the many less-expensive clones? The base unit is expensive, and you then have to pay extra for parallel and serial ports, the video interface, IBM

PC DOS, and documentation. IBM makes sense if you're willing to pay extra for peace of mind. There's nothing like using the machine that set the standard to generate real security, because

you know all software and add-on hardware will work with it. The IBM PC/XT is solid and well-built (though backed by a meager 90-day warranty), and the once maligned keyboard now has a good layout and a crisp feel. But the PC/XT is much slower than most of its imitators: graphics-intensive applications such as desktop publishing or *Microsoft Windows* (which gives the PC a Macintosh-like interface) run painfully slow. Besides, IBM has

now introduced its Personal System/2 line with four pepped-up new computers (see special section on page 48A). For example, the least expensive Model 30 (\$1,945 with monochrome monitor and two 3.5-inch disk drives) offers enhanced graphics, 640K memory, and built-in serial, parallel and mouse ports. If you're set on the IBM brand, don't overlook the new machines before picking your model.

AMSTRAD PC 1512 DDM

List Price: \$899
Warranty: One year parts; 90 days labor
Memory: 512K/640K
Speed: 8 MHz
Slots: Three
Supplied ports/interfaces: Serial, parallel, battery-powered clock/calendar, joystick, mouse, light pen
Video interfaces: Monochrome graphics, color graphics
Hardware included: Two internal 5.25-inch disk drives (360K), monochrome monitor, mouse, numeric keypad

Software included: MS-DOS, DOS Plus, GEM Desktop, Locomotive BASIC, GEM Paint, GEM Doodle
Text: 80 x 25
Colors: 16
Graphics resolution: 640 x 200 (color); 720 x 348 (monochrome)
Sound: One channel, mono (with volume control)
Other models: Includes PC 1512 DDC (\$1,099), with RGB color monitor and PC 1512 HDC (\$1,499), with RGB color monitor and 20 MB hard drive.

Remarks: With attractive, sculpted lines, this British import (it's a big seller in the U.K. and Europe) makes a strong first impression. When you count up all that's included in the package, and how reasonable the price is, you'll continue to be impressed. Not only do you get a full collection of ports and interfaces and a few slots for extras, the PC 1512 also includes a mouse and the GEM software to give you icons and drop-down menus. The package runs all software at a sharp 8.0 MHz; but it has no slow speed,

which might have an adverse affect on game-playing. This might be a great PC, but there's one problem, and it's potentially a large one: Amstrad built the power supply into the monitor. This awkward arrangement means you have to use the Amstrad monitor. What if you can't find another Amstrad monitor if the power supply breaks? Fortunately, the monitor has great color graphics. In general, the Amstrad appears to be a fine value.

ATARI PC

List price: \$700
Warranty: 90 days
Memory: 512K/640K
Speed: 4.77 and 8.0 MHz
Slots: None
Supplied ports/interfaces: Parallel, serial, mouse
Video interfaces: Monochrome graphics, CGA, EGA
Hardware included: One internal 5.25-inch disk drive (360K), mouse, numeric keypad, monochrome monitor

Software included: MS-DOS, GEM, GEM Paint, GEMWrite
Text: 80 x 25
Colors: 64
Graphics resolution: 640 x 350 (for EGA)
Sound: One channel, mono
Other models: Atari PC (\$499), with one disk drive, no monitor, no EGA interface.

Remarks: The PC is another Atari "power-without-the-price" special—three major IBM video interfaces are built into one consumer-priced machine. The EGA interface, with its greater palette and resolution, is worth around \$200. And the computer comes with an EGA monochrome monitor, which is worth about \$300. A mouse and the GEM icon-based operating system is included, unusual for an IBM compatible, and the Atari PC runs at the rapid 8.0 MHz needed to make GEM run properly. With all the basics in one compact package at a low price, this PC could

be a good deal, especially for beginners. (I say "could" because we've yet to see and test a production model of the machine; according to Atari, it will be available by August of this year.) One major disadvantage is that the computer comes with only one disk drive, and almost all productivity software requires two drives. You can add a second, but it will be external. And the keyboard is not detached from the unit, as on most compatibles, so you have less control over your typing position.

BLUE CHIP PERSONAL COMPUTER XT

List price: \$599
Warranty: 360 days
Memory: 512K/640K
Speed: 4.77 MHz
Slots: Six
Supplied ports/interfaces: Serial, parallel
Video interfaces: Hercules-compatible monochrome

Hardware included: One 5.25-inch disk drive (360K), numeric keypad
Software included: MS-DOS
Text: 80 x 25
Colors: 16 (with CGA)
Graphics resolution: 720 x 348
Sound: One channel, mono
Other models: None

Remarks: The initial price may be tempting, but to bring your system up to the configuration of many PCs, you'll need a monitor (\$100), a second disk drive (\$140), and MS-DOS 3.2 and GW

BASIC (\$100). (NOTE: According to the manufacturer, a version of MS-DOS is now bundled with the system; however, in shopping for a Blue Chip PC recently, DOS was an additional \$100.

Be sure to look for a Blue Chip package with MS-DOS included.) That'll bring you to \$940—still a good price, but not as amazing as it might have appeared initially. And you'll have to install the second disk drive yourself. What you get for your money is plain vanilla, many people's favorite flavor. The Blue Chip will run all IBM PC/XT software, the keyboard is well laid

out and adequate for all but the most heavy-duty typing (the keys offer a decent but not excellent touch, like most less-expensive clones), and its six empty slots give many pathways to expansion. It also has a 130-watt power supply (should you want to add a hard-disk drive).

COMMODORE PC 10-2

List price: \$1,199
Warranty: One year
Memory: 640K
Speed: 4.77 MHz
Slots: Five
Supplied ports/interfaces: Serial, parallel
Video interfaces: Hercules-compatible monochrome, CGA
Hardware included: Two internal 5.25-inch disk drives (360K), numeric keypad

Software included: MS-DOS, BASIC, Sidekick
Text: 80 x 25
Colors: 16
Graphics resolution: 640 x 200 (CGA); 720 x 348 (monochrome)
Sound: One channel, mono
Other models: PC 10-1 (\$999); 512K/640K. With one disk drive.

Remarks: The PC 10 series has been a big success in Europe, and one wonders why Commodore didn't bring it to the United States sooner. Now, with all the competition, the PC 10 runs the risk of getting lost in the crowd. This sturdy-looking PC with the big footprint is plain vanilla (only 4.77 MHz) with chocolate sauce (CGA video interface and 640K). You'll also find sprinkles

on top with the bundling of Borland's *Sidekick* desk-accessory package—a truly helpful extra. The keyboard has a firm touch, and it's lighter than most (which is good if you like to work with the keyboard in your lap). If you prefer the Commodore brand, try to find the PC 10-2 at a discount.

EPSON EQUITY I

List price: \$995
Warranty: One year
Memory: 256K/640K
Speed: 4.77 MHz
Slots: Three
Supplied ports/interfaces: Serial, parallel
Video interfaces: None
Hardware included: Two internal 5.25-inch disk drives (360K), numeric keypad
Software included: MS-DOS, BASIC
Text: 80 x 25

Colors: 16 (with CGA)
Graphics resolution: 640 x 200 (with CGA)
Sound: One channel, mono
Other models: Equity I (\$795), with one disk drive; (\$1,395), with one disk drive and one internal hard drive (20MB). Equity II (\$1,395); 640K; includes dual-speed microprocessor (4.77 and 7.16 MHz), five slots, battery-powered clock/calendar, and monochrome, Hercules-compatible, CGA, and composite video ports.

Remarks: A number of factors make the Equity line stand out among the compatibles. The Equities include an attractive main unit that takes up little desk space, a keyboard with a noticeably springy touch, and a full one-year warranty from a well-established company. Before your Equity I system is complete, however, you must add a monitor, either monochrome (\$149, with \$129 interface) or RGB color (\$549, with \$149 color graphics interface). Many dealers, of course, bundle the monitor and

video board in their sales packages. The main drawback to the Equity I is the lack of expansion potential. You'll use one slot to expand the memory from 256K, and one for the video interface, leaving just one open slot. If you think your needs are likely to expand, you might want to look at the Equity II; it adds two slots, a dual-speed mode, a clock/calendar, multiple video ports, and comes with 640K of memory.

KAYPRO PC

List price: \$1,595
Warranty: One year
Memory: 768K
Speed: 4.77 or 8.0 MHz
Slots: Nine
Supplied ports/interfaces: Serial, parallel
Video interfaces: Hercules-compatible monochrome, CGA
Hardware included: Two internal 5.25-inch disk drives (360K), monochrome monitor, numeric keypad, battery-powered clock/calendar

Software included: MS-DOS, BASIC, WordStar 4.0 (w/mailmerge and spelling checker), Polywindows
Text: 80 x 25
Colors: 16
Graphics resolution: 640 x 200 (color), 720 x 348 (monochrome)
Sound: One channel, mono
Other models: Kaypro PC-30 (\$1,695); 768K. Includes one internal 5.25-inch disk drive (360K) and one internal hard drive (30MB).

Remarks: The PC is a typically well-built Kaypro computer, with the usual Kaypro software package (the *WordStar* word processor). You can't go too wrong with this basic PC system, especially with its dual-speed microprocessor, full memory (768K), and modular construction that allows for future expansion. (You can replace the main microprocessor, since it comes

on a circuit board.) Though the main unit takes up a lot of desk space, it gives you a lot of flexibility. Even with the serial and parallel ports and the video interface, you still have six open slots. The keyboard is only adequate to the touch, but the Kaypro is still a good, reliable choice.

LEADING EDGE MODEL D

List price: \$1,295
Warranty: 15 months
Memory: 512K/768K
Speed: 4.77 and 7.16 MHz
Slots: Four
Supplied ports/interfaces: Serial, parallel
Video interfaces: Hercules-compatible monochrome, CGA
Hardware included: Two internal 5.25-inch disk drives (360K), monochrome monitor, numeric keypad

Software included: MS-DOS, BASIC, *Leading Edge Word Processor* (with spell-checker)
Text: 80 x 25
Colors: 16
Graphics resolution: 720 x 348 (monochrome); 640 x 200 (color)
Sound: One channel, mono
Other models: Model D2 (\$1,936), with 640K, two 1.2-MB floppy-disk drives, runs at 10 MHz.

Remarks: After you spend time looking at all the different PC compatibles, the little things start to stand out. That's what many people notice about the Leading Edge Model D. They like the accurate touch of the keyboard and the compactness of the main unit. They like the dual speed, the solid word processor

that comes with the computer, and one of the longer warranties around (15 months). What's not to like? Because of its small footprint, there are fewer slots (four) than on some other compatibles. But you get a lot more than you give up with the Model D, a highly recommended IBM compatible.

PANASONIC BUSINESS PARTNER FX-600

List price: \$1,249
Warranty: 1 year
Memory: 256K/640K
Speed: 4.77 and 7.16 MHz
Slots: Six
Supplied ports/interfaces: Parallel
Video interfaces: None
Hardware included: Two internal 5.25-inch disk drives (360K), battery-powered clock/calendar, numeric keypad

Software included: MS-DOS, BASIC
Text: 80 x 25
Colors: 16 (with CGA)
Graphics resolution: 640 x 200 (with CGA)
Sound: One channel, mono
Other models: None

Remarks: Compare the Business Partner to the Leading Edge Model D, and you'd likely call it a stand off. You get more slots with the Panasonic (six), but the Leading Edge has more interfaces built in. Both have excellent keyboards without the mushy touch often found in less expensive machines, and both run at 7.16 MHz to speed productivity. The Panasonic is more heavily

discounted than a lot of PCs, making even hard-drive configurations seem inexpensive (\$1,699 retail with a 20-MB hard-disk drive). However, it doesn't come with a video interface or monitor, so figure that in your pricing calculations. With a one-year warranty from an established company, the Business Partner is a safe choice.

TANDY 1000 SX

List price: \$999
Warranty: 90 days
Memory: 384K/640K
Speed: 4.77 or 7.16 MHz
Slots: Five
Supplied ports/interfaces: Parallel, light pen, two joysticks, audio
Video interfaces: Monochrome, CGA, composite
Hardware included: Two internal 5.25-inch disk drives (360K)

Software included: MS-DOS, BASIC, *DeskMate II*
Text: 40 x 25, 80 x 25
Colors: 16
Graphics resolution: 640 x 200 (CGA)
Sound: Three channel, mono
Other models: Tandy 1000 EX (\$599); 256K/640K. Includes only one disk drive and *Personal DeskMate* software. Adds audio port with volume control; no light pen port.

Remarks: As packages go, the SX is almost complete: just add monitor (monochrome, \$130, or RGB color, \$300-\$460) and your choice of printer. The SX is well-made, easy to set up, and can run at 7.16 MHz. The new *DeskMate II* is an especially easy-to-use integrated package with enough features to become your main program. (*Personal DeskMate*, which comes with the EX, is not nearly as complete.) Just realize that you're getting a keyboard without the standard IBM layout, especially the placement of the function keys across the top rather than down the left side. Also, some software has to be reconfigured to run

properly. Even though the keyboard has a crisp feel, people with large hands often find the keys are too cramped together. While you can use third-party expansion boards in some circumstances, it's safer to stick with Tandy's own boards. On the one-drive EX, you *must* use special Tandy boards. If these limits don't disturb you, the SX and EX are well-made computers with a feature no other IBM compatible offers: three-voice sound. And, of course, the virtually omnipresent Radio Shack outlets mean that you'll never be too far from service, information, and software. **FC**

Top 10 Computer-Based Home Businesses

IDEAS FOR GETTING STARTED, WITH TIPS FROM THOSE WHO'VE ALREADY DONE IT

BY LYNIE ARDEN

Fourteen million Americans work at home, and their ranks are growing daily. Computers are certainly driving this trend—homeworkers are twice as likely as the general population to own computers, according to the 1986 National Work-At-Home Survey sponsored by Electronic Services Unlimited (ESU), a New York-based research firm. In fact, ESU says the leading reason for using a computer at home today is to produce an income. Computers are being used by moonlighters, part-timers supplementing their spouse's income, and full-time electronic cottagers.

How you can use your computer to make money is limited only by your imagination. To get you started, here's an overview of the 10 most popular computer-based home businesses, as indicated in a survey of the 500 members of The Association of Electronic Cottagers. (The AEC's electronic home is the Working From Home Forum on CompuServe.) The survey is by no means scientific—but the results have the ring of truth to them. Each description includes a profile of one person who has succeeded in that business.

TYPESETTING

The composition industry has changed a great deal over the past few years, as computers came into the picture. Previously, typesetting had to be done almost exclusively on expensive equipment in typesetting shops. Now, input operators in several different locations can use comput-

ers at home to transmit coded text to one typesetting shop's specialized printer, even one in another state. The codes instruct the printer to use a specific type size or style, to print type in **bold** or *italics*, and to insert special characters or symbols.

The use of home keyboarders has

Wanda Welliver

become commonplace within the type composition industry because it helps to stabilize costs. It's so common, in fact, that a spokesperson for the National Composition Association claims anyone who can type can probably find work just by looking through the Yellow Pages and calling five or six typesetting companies. Since they all use different software and formats, typesetting shops expect to train new keyboarders. The most important qualification is to be an accurate typist.

Wanda Welliver, of Omaha, Nebraska, worked as a home typist (using a typewriter) for many years. She lost her job, she says, with the advent of computers. Later, Welliver resolved: "If you can't beat 'em, join 'em."

Now she works at home for a local printer, imbedding code in text for magazine articles, newsletters, and

books. "It took me three months to learn the basics of computers, formatting, proofreading, and copyediting," she says. "Not bad, considering I'd never seen a computer before!"

Welliver uses an IBM PC, Wordstar, and Webster's Spelling Checker, and a modem to send copy to the typesetter. Like most home typesetters, she's paid a set rate for each character entered, and earns from \$75 to \$500 a week. The average home typesetter's wage is \$12-\$25 per hour.

BOOKKEEPING

Computers have given independent bookkeepers a big competitive boost by increasing their efficiency and range of services. In the time it takes to write your monthly checks, you could use a computer to prepare a check register, print out your checks, and use the information to compile an income statement and balance sheet, too. And that's what bookkeepers do.

The best place to look for bookkeeping clients is among new and small businesses that have limited record-keeping experience. Your basic service (accounts payable and receivable

Norman and Barbara Eide

LYNIE ARDEN is editor and publisher of Workstader News, a newsletter that acts as a national clearinghouse for work-at-home opportunities. A sample is available for \$1 from TWN, Box 8021, Rancho Cordova, CA 95670. She is also the author of The Work-At-Home Sourcebook.

and an income sheet) should cost the client about \$75 a month and take two or three hours to complete.

Norman and Barbara Eide operate Bottomline Bookkeeping from their Sacramento, California, home. They use an Apple IIe, an ImageWriter printer, and *General Accounting* software (BPI Systems).

"This is not a business for amateurs," says Norman. "It requires a solid background in bookkeeping and attention to detail." He has found that providing personal consultations and reliable service are the keys to keeping clients.

As for working at home, Norman says: "We wouldn't be in business if we couldn't use our home for office space. To pay rent on commercial office space would be financially impossible. The fringe benefits are great!"

WRITING

Writing is a traditional home business; only the tools have changed. Writing still requires an ability to convert thoughts into words, but the editing and rewriting process is easier with a word-processing program and spelling checker.

The best opportunities today are in technical writing and business writ-

Dana Cassell

ing for trade journals, or health, fitness, and travel writing. Once you get started, you can expect to find steady work in those areas.

Technical writers translate technical, scientific, and other complex information into language the layperson can understand. They write labels for paint cans, instruction pamphlets for microwave ovens, and user manuals for computers. For a full-time freelancer, an annual income over \$30,000 is typical.

Dana Cassell had been a business writer for many years, but she has taken the business a step further. Five years ago, she started the Florida

Freelance Writers Association in her Fort Lauderdale, Florida, home to help other writers find work. It has since evolved into two writer data banks, computerized data bases that list writers throughout the country and categorize them by geographic area, expertise, type of writing, and level of experience. When an editor needs a writer, Cassell fills the order immediately. Writers pay \$25 to be listed for a year, and agree to pay Cassell 5 percent of any work they get through her.

"People want to become writers because they like to read and think," says Cassell. "A good writer is a perpetual student. You don't have to be an expert in anything, you just need to enjoy learning about everything and putting it down on paper to tell the rest of us all about it."

Cassell is a confirmed homemaker. "At one point, I thought I'd be more productive without the distraction of four kids around, so I rented an office. I was wrong. Three months later I was back home for good."

DESKTOP PUBLISHING

Desktop publishing, one of the newest computer businesses, is among the most expensive to start. You'll spend about \$8,000 for the basic system—a 512K computer, page-layout and word-processing software, and a laser printer. If you're not ready to make that commitment, you can rent the hardware by the month or buy the computer and rent time on a laser printer.

Desktop publishing is simply a technological shortcut that gives you the ability to design pages and merge text and graphics on a computer screen. Then, you can print out your

Tom and Sue Ellison

page on a laser printer or transmit it to a typesetter.

Desktop publishing is commonly used to produce newsletters and restaurant menus, but you can use it to create just about any business document. Fliers, brochures, catalogs, and price lists are just a few examples.

Some home-based desktop-publishing entrepreneurs have even started commercial publishing houses that print books. Such a venture requires sophisticated software that is capable of formatting many pages at once.

Tom and Sue Ellison publish books and catalogs from their Boulder, Colorado, home using a Macintosh system. "The cost of the system is cheap when compared to traditional typesetting equipment and graphic artists' fees," says Tom. "Once you've published three books, the system has paid for itself. In addition to saving time and money, you reduce errors because the text is only keyboarded once."

INFORMATION RESEARCH AND BROKERING

Data-base research is no different from going to the library except that the tools are a little more sophisticated. Beyond a basic understanding of how to conduct research, electronic research requires no special background unless you intend to specialize in a particular field. If you've ever done a term paper, you know the basics of what's involved.

You'll need a computer, a modem, communications software, and a printer. The type of printer you need depends on the market you plan to service. A letter-quality printer is recommended for cover letters and summaries for doctors, lawyers, or other professionals. A dot-matrix printer is fine for raw data and general business reports.

Your biggest up-front expense will

be at least \$1,000 for books, database subscriptions, on-line learning time, and classes given by each database vendor. To find out what databases are available, look for the two-volume *Datapro Directory of Online Services* (Datapro Research Corporation; [609] 764-0100) at your local library.

The ongoing expense of access time (the range is from \$30 to \$600 an hour) will be paid by clients. The key to keeping costs down is to prepare a search strategy; have a list of specific questions and know where to look before you log on. There are different methods of charging for such a service, but an easy rule of thumb is to multiply the cost of on-line time by a factor of 1.5 to 2.5, depending on your degree of specialization or how the client wants the research prepared. For example, if you spent five hours on an electronic data base at a prime-time connect charge of \$35 an hour, you would charge the client \$262.50 to \$437.50. (See next month's *Telecomputing* department for an article about on-line research.)

John Everett, of Irving, Texas, specializes in legal and business research; his company's name is Re-

John Everett

sponse Time. "I try to confine my marketing efforts to people who understand the value of information," he says. "I reach lawyers through direct mail and by attending local Bar Association meetings and conventions."

Any type of business that needs information for decision-making—such as a market-research, public-relations, or advertising firm—is a potential client. But it pays to specialize in one subject area. "A generalist," says Everett, "might spend half the time explaining the on-line services to potential clients."

What's the best thing about work-

ing at home? "The 30-second commute down the hall," says Everett. "But it's also the worst thing. It's important to keep your work space separate so you can shut the door and forget it at the end of the day."

WORD PROCESSING

Word-processing businesses are popping up everywhere, but the field has a long way to go before it reaches the saturation point. Two of the most lucrative markets for word-process-

Steve Green

ing services are legal, for depositions and briefs, and medical, for narrative summaries and correspondence. Both require a knowledge of the jargon and technical terms, hence the high pay, which ranges from \$15 to \$45 an hour.

The easiest place to find business is on a college campus. Most students don't have typewriters—let alone computers—but they do need to write term papers, theses, and many other

assignments. Word-of-mouth advertising can eventually get you all the business you can handle. To get your first customers, place an ad in the school newspaper, pay the campus bookstore to insert your fliers into textbooks, or do both. A reasonable rate may be \$1 per double-spaced page. A good typist can produce about 10 pages per hour.

Your computer, a word-processing program, and a printer will get you started. Choose a keyboard with a good touch and, if possible, word-processing software that will save text as you enter it.

Steve and Joy Green have taken their home business, Green's Machine, to a high level. Their clients are major corporations in the Milwaukee, Wisconsin, area. They have so much business they farm out work to 30 independent contractors.

"Working at home is like time shifting," says Steve. "You have a lot more freedom of choice in what you do each day. You can rearrange your schedule according to your family's needs. At home, without the office rituals and distractions, you'll find you can accomplish in five hours what used to take you eight. The remaining three hours—not to mention commuting time—can be spent any way you wish."

MAILING-LIST SERVICES

A mailing-list service is the easiest computer business to start. It's a low-overhead, fast-start business that requires little technical know-how.

The basic service is mailing-list maintenance; that is, typing names and addresses into a data base, printing them out on labels whenever the customer needs them, and keeping the list updated. From this basic service, your business can expand into other areas, such as bulk-mail preparation, design, layout, and typeset-

Steven Fletcher

ting of mailing pieces, and mailing-list rental and brokerage.

You don't need a fancy computer system to perform most of these tasks. When Steven Fletcher started his home business, AD Mail Management, in 1978, he had a TRS-80 Model I, a mailing-list program, and a dot-matrix printer. "As long as you have enough on-line capacity to handle 3,000 addresses at a time, you can do well," he says. Today, with help from his wife, Fran, a graphic artist, Steven offers a full range of services—with a Tandy Model III, two Macintoshes, and a LaserWriter printer.

Mailing-list maintenance is another business-to-business service. Look for the business that is too small to have its own computer supplier, but has a customer list of 1,000 to 3,000. Inform other business owners in your area about your services, and talk to local printers. Since they print the mailing pieces, they get a lot of inquiries about mailing services, and may agree to send people your way.

You'll want to compare your fees with the competition's before you start. Steven charges 15 cents to enter an address and 5 cents each time he prints it on a label. "I can key in 150 addresses per hour," he says. "The real gravy, though, comes when I print out the labels. That's pure profit for virtually no effort."

CUSTOM PROGRAMMING

It's getting tougher to break into custom programming. The field is so crowded, the rates have been driven down to an average of \$20 an hour. Finding a three- or four-month job is easy enough; sustaining it is the hard part.

One way to break in is to be a very good programmer with specific skills in languages such as C and Assembly and to have some understanding of compilers. Find yourself a niche where others may not have any background.

After five years of full-time custom programming from his home in a remote Maine community, Phil Neal, owner of dba MicroServices, has a client base ranging from a three-person architects' office to the United States Navy. Most of his business comes from word-of-mouth referrals.

Neal does not write programs from scratch but takes existing software and customizes it for his clients' needs. The key to success, he says, is to become better schooled in business applications and systems analysis. "You must have a sense of systems design before you can expect to

Phil Neal

alter that system. The programming is nothing; it is after the fact. It's critical to find out how people want something to work and create a system that will work that way, taking into consideration the abilities of the person who's going to use it."

Neal says, "I live in a very remote community, and it would be very difficult to envision working any other place except home."

DATA ENTRY AND PROCESSING

Home-based data processors usually work under contract to corporations or service bureaus. Carolyn Hyde is one of 100 "cottage keyers" working under contract with Blue Cross/Blue Shield of South Carolina. Her job is to enter data coded from health insurance claims and send it via modem from her IBM PC at home in Lugoss, South Carolina, to the company's mainframe in Columbia.

Carolyn worked in-house for Blue Cross/Blue Shield for over a year before moving home to work. As an in-house employee she received a base salary. Now she's paid for each line of data entered. "It's nice to get paid for what I do. I know if I want more money, I simply have to work more to get

Carolyn Hyde

it. And I average more money per hour working this way.

"The best thing about working at home is not being confined to a 9-to-5 job. If I want to take my kids to school in the morning, I can—and I don't have to make any excuses for being late to work!"

COMPUTER CONSULTING

Consulting demands your personal attention to clients' needs and problems. Patience, perseverance, and the ability to listen are three major attributes that a consultant might find helpful. Your client has business experience, and you have computer

Dan Sternklar

experience—you need to educate each other until you find a solution.

In addition to having the latest equipment, it's also important to keep abreast of the industry. Regularly read trade journals, books, and magazines. Attend users' group meetings and trade shows. These are perfect places to find clients, too.

Consulting is a potentially rewarding field, but it's not a get-rich-quick venture. Initially, be careful not to take on an overload—no matter how attractive those dollar signs look.

Dan Sternklar's Ohio-based firm, Clear Star International, has grown into a highly respected network of over 50 home-based consultants. "We have people from all walks of life, programmers and non-programmers. As a novice, you could start out on your own by doing volunteer work. Or you could gain experience by working for someone like us.

"The important thing," Sternklar says, "is to establish a reputation. We literally treat each project like it could make us or break us—and it's true. Working at home is a mixed bag. It offers a creative environment, and the independence is great. But you have to be self-motivated and keep everything in perspective."

bulletin boards. This is the age of computer-designed fliers decorated with artwork and fancy fonts. Many merchants and professionals display computer-designed signs to advertise their stores, products, or special sales. Dot-matrix and even laser printouts—incorporating graphics,

text, and sometimes, color—are everywhere.

For virtually every computer, there's software that will produce custom greeting cards, fliers, awards, invitations, brochures, calendars, labels, posters, banners, and even cartoons. All you need are the basics: a

disk drive and a dot-matrix printer that's compatible with your software.

These powerful and easy-to-use printout programs allow you to enter the world of graphic art—and you don't have to be artistically inclined to use them. Nor do you have to be a computer whiz to get the most out of your dot-matrix printer. Because printout programs enable you and

your printer to create things you couldn't ordinarily do, designing and publishing can be gratifying.

GENERAL-PURPOSE PROGRAMS

Broderbund's *Print Shop* is the original greeting card and stationery program. With it you can produce banners, signs, fliers, stationery, and

invitations. You select border patterns, pictures, and type styles, set the size of the finished product, type in your text, and print out the finished copy.

On the Apple II, Macintosh, and IBM versions, you can preview your design before printing; you can't, however, on the Atari XE/XL and Commodore 64/128 versions. (On the

DeluxePrint	Electronic Arts (415) 571-7171	cards, signs with famous-people graphics	Amiga (\$100)
Fontasy	Prosoft (818) 765-4444	28 fonts for cards, signs, newsletters	640K IBM PC & compatibles (\$70)
GraphicWorks	Mindscape (312) 480-7667	business and personal documents	512K Mac (\$80)
Greeting Card Maker	Activision (415) 960-0410	cards, invitations, announcements	64K Apple (\$40); C 64/128 (\$35)
LabelMaster Elite	Migraph (206) 838-4677	disk labels, index cards, mailing labels, mailing list manager, <i>Printmaster</i> -compatible graphics editor	Atari ST (\$45)
MacBillboard	CE Software (515) 224-1995	giant posters, cards, banners, signs, iron-on transfers	512K Mac (\$35)
Minipix disks	Beagle Bros (619) 296-6400	cards, banners, signs	48K Apple (\$30); IBM PC & compatibles (\$35)
PartyWare	Hi-Tech Expressions (305) 854-2318	invitations, animated cards, party decorations	64K Apple, Atari, C 64/128, 256K IBM PC & compatibles (\$15)
Prince	Baudville (616) 957-3036	stickers, stationery, labels, announcements, cards, iron-ons, banners	64K Apple (craft kit and software, \$50); (package and colored ribbon, \$65)
The Print Shop	Broderbund (415) 479-1185	cards, signs, letterheads, banners	64K Apple (\$50); Atari, C 64/128 (\$45); 512K Mac, 128K IBM PC & compatibles (\$60)
The Print Shop Companion	Broderbund (415) 479-1185	adds fonts, borders, functions and graphics to <i>The Print Shop</i>	64K Apple (\$40); Atari (\$35); C 64/128 (\$35); IBM PC & compatibles (\$50)
The Print Shop Graphics Library	Broderbund (415) 479-1185	clip art for <i>The Print Shop</i>	4 versions for Apple (\$25 each); 3 for Atari (\$25 each); 4 for C 64/128 (\$25 each); 3 for IBM PC & compatibles (\$35 each)
The Printing Press	Channelmark Corp. (415) 345-5900	posters, cards, letterheads, borders	256K IBM PC/XT/AT & compatibles, PCjr (\$50)
Printmaster Plus	Unison World (415) 848-6670	calendars, cards, stationery, banners, signs	Apple (\$40); Amiga (\$50); Atari ST (\$40); C 64/128 (\$35); IBM PC & compatibles (\$60)
Sign Designer	Channelmark Corp. (415) 345-5900	banners, signs	48K Apple II (\$60); 128K IBM PC/XT/AT & compatibles, PCjr (\$60)
Silicon Press	Silicon Beach Software (619) 695-6956	mailing labels, envelopes, stickers, cards, signs, invitations	512K Mac (\$80)
Walt Disney Card & Party Shop	Bantam Software (212) 765-6500	stationery, cards, name tags, place mats, wrapping paper, banners	64K Apple (\$40)

* Refer to text for explanation of categories

Apple and IBM versions, you can also print in color.) Consequently, you often have to print out several patterns before finding one that suits you. *The Print Shop Companion*, for use with the original program, adds new borders, fonts, and design possibilities, such as calendars and mirror-image creations.

Since new pictures are always welcome, several *Graphics Library* disks are available. In addition, other publishers, like Springboard and Epyx, have created disks full of *The Print Shop* artwork. If you join *The Print Shop Users' Club* (Apple II users only; Box 216, Mercer Island, WA 98040), you can buy an inexpensive utilities disk and use it to create mailing labels, envelopes, and bookmarks.

Because of *The Print Shop's* popularity, other publishers have produced similar programs—some of which surpass the original's capabilities. With *Printmaster Plus* (Unison World), for example, you can preview at any stage of design—before you print calendars, cards, stationery, and banners. You can save your designs on disk for future use. Additional graphics disks, *Art Gallery I* and *II*, supply more than 140 graphics apiece.

Prince (Baudville) is a general-purpose printout program with a twist. The software can reverse an image; you can use a color printer to create multicolor, iron-on transfers for T-shirts. You can even use a printer that prints only in one color; *Prince* will indicate when it's time to change ribbons.

SPECIALIZED PROGRAMS

With the general-purpose programs, you can produce a wide variety of printouts. But if you want to focus on a particular kind of printout, specialized software makes it easier. (See the *Home Office* department in this issue for a description of high-powered software that works with laser printers.)

Greeting Cards. For example, with *PartyWare* (Hi-Tech Expressions), my teenage daughter, Debbie, created invitations for a theme party. Since she likes horror books and movies, the party was a ghastly event. Using only the supplied graphics, she created invitations (FOR GHOULS ONLY!), decorations, and thank-you notes.

Debbie's computer-generated party goods were so successful that she's starting a party-preparation business. Her first customer, eight-year-old cousin Lori, wants a Winnie-the-Pooh theme for her next birthday

party. Debbie chose *Walt Disney Card and Party Shop* (Bantam) to create the favors for this event.

Awards and Certificates. The coordinator of a dropout prevention program at a New York City high school now designs monthly awards for students with regular school attendance. He selects the winners from his data base and uses *Certificate Maker* (Springboard) to print their awards.

Award Maker Plus (Baudville) offers 286 ready-made formats, and gives you the tools to create your own. While other certificate programs have limited graphics, this program allows you to import your favorite graphics from *The Print Shop* and use them as borders.

Comics. Designing cartoons is a specialized art form that few have mastered—until cartoon software came along, that is. *Walt Disney Comic Strip Maker* (Bantam) offers comics you can customize. You add frames to existing strips, change text, and alter the story line. In addition, you can create comic strips using Disney characters: design backgrounds and objects, and then add your own text.

Create With Garfield (DLM) lets you take Jim Davis's loveable characters, arrange them on the screen, put words into the cartoon bubble, and print out the result. Our neighbor Jennifer created a Garfield comic book by printing her cartoons and stapling the pages together. Her father, a village trustee, designed a "clean-up" campaign poster with a smiling Garfield eyeing a garbage can.

The most impressive cartoon program, *Comic Works*, is actually a special cartoon template that works with *Graphic Works* (Mindscape). You can create single or multiple frames—the panels of the daily newspaper variety—or design a multipage professional comic book. The concept and artwork are by Mike Saenz, who wrote *Shatter*, the first computer-generated comic book.

T-Shirts. *T-Shirt Shop* (Spinnaker) is dedicated to printing reverse-image iron-on transfers that you can use to make your own stylish T-shirts.

Labels. You can use many data-base programs to produce mailing labels, or you can use a specialized label-making program. *Label-Master* (Mi-Graph) gives you graphic designs to use on the labels. The program also has the same searching and sorting features you'd find in a data-base program.

Business Forms. One of the most versatile printout programs is *Graphic Works* (Mindscape). This easy-to-use

program provides templates for many business documents, such as invoices and restaurant menus. In addition, you can create posters up to 32 times larger than a standard page.

MOUSE MACHINES

Mouse-driven computers—such as the Macintosh, Amiga, and Atari ST—have outstanding graphics capabilities. This can be an advantage when designing a printout. First, software for these computers generally lets you see on-screen exactly what will appear on paper. Second, the mouse allows you to drag and nudge letters and click on art, so it's easier to produce professional-quality work. With software such as *Silicon Press* (Silicon Beach Software), print elements can be moved around and lined up perfectly, giving you much more control than, say, with *The Print Shop* on an Apple II.

MacBillboard (CE Software) allows you to create posters as large as 19 feet by 26 feet. The program prints out parts of the design on separate sheets of paper; you assemble the graphic by lining up the correct edges so that it looks like a real billboard. Store owners could use the program to create giant window posters to advertise sales.

DESKTOP AND DATA-BASE SOFTWARE

In addition to the straightforward printout programs—those that don't require other software or hardware (besides a printer)—you can use more sophisticated desktop-publishing programs to achieve stunning effects. For instance, with *PageMaker*, you can load in digitized photographs, mix them with text from a word-processing program, and print an eye-catching poster. Similarly, you can create posters or cards by using a screen-dump program that allows you to print whatever appears on your computer screen.

If your computer or software can drive a laser printer, these documents may look even better. Printout software is a powerful utility, but the final output can be hampered by the quality of your dot-matrix printer. You can also dress up your work with special paper: parchment for awards or bright colors and pastels for fliers and stationery, for example.

Most people have vivid imaginations and wild ideas—but a hard time putting them into words or onto paper. Today's printout programs should be tools to inspire you—to plan a party, run for office, sell a widget—and get your ideas on paper. 

Shopping for Software

SENSIBLE STEPS TO FINDING WHAT'S RIGHT FOR YOU

BY ABIGAIL REIFSNYDER

Whether you're a software zealot or you're buying a program for the first time, you know that shopping for software can take a big bite out of your budget. Unless you have a limitless disposable income, you have to be particular about your purchases. You have to decide whether the \$70 word processor is really better than the one for \$49. And if you shop around, can you find the \$60 graphics program for \$40? What if you get the program home, and it doesn't do what you want it to do? What if you discover that you've wasted your money?

Careful shopping takes time and energy, but it's almost always worth the effort. Anyone who's ever brought

home a data base that holds only a handful of records or an educational game that's more boring than a workbook can tell you that. So what does shopping for software entail? The tales of many FAMILY COMPUTING readers helped us come up with basic steps to help you find the software that's right for you and your family.

BEFORE YOU GO SHOPPING . . .

Know what you need. "Never shop in the store," says Mark Johnson of New Windsor, New York. Knowing that you want a word processor isn't enough. Ask yourself what kinds of things you'll be writing: letters, short articles, newsletters, or long manuscripts. Maybe you want a graphics program. Is it for doodling or for making business charts? Do you want to be able to print your graph-

ics? In black and white? In color? Do you want libraries of art? Questions like these help narrow down the choices as you become aware of the features most important to you.

Read software reviews. Stephanie Roberts, a graduate student and mother of three, explains: "It's important to read reviews before you go to the store because some software has pretty snazzy packaging that doesn't really tell you what's inside."

Most buyers find that reading reviews in more than one magazine is a good idea, since it enables them to cover more programs and get different perspectives. Which brings us to an important point: Just as the movie-review team Gene Siskel (of *The Chicago Tribune*) and Roger Ebert (of the *Chicago Sun-Times*) often disagree, software reviewers have differing opinions. As a software reviewer,

ABIGAIL REIFSNYDER wrote "Computer Conversations" in the November 1986 issue.

ILLUSTRATION BY DEBRA WHITE

I can assure you that if I sat down at the computer with another software reviewer, we might come to completely different conclusions about the program at hand. Ease of use may be the priority for one reviewer, while the number of options may interest another. What you should concentrate on is the actual description of features you need.

Look at advertisements. The Willetts family of Sylvania, Ohio, always checks magazine ads to find out about new programs. They don't believe everything they read in advertisements and stress that follow-up work is important (trying out the programs in the store, for example).

Let's say you're looking for a data base to help you keep track of clients for your home-based business. A look at some magazine ads may uncover unfamiliar programs. When John Bailin of New York City and a co-worker were buying a word processor and found magazine ads for programs they'd never heard of before, they called the software companies directly to check on the features of programs they were considering.

Talk to other computer users. Word-of-mouth is one of the most helpful and accurate gauges of a program's usefulness. Lotus 1-2-3 may be a best-selling program, but you should talk to a neighbor who has it and find out if it really serves his or her needs. Of course, not everyone knows a lot of computer owners, so talking to people may not be as easy as it sounds. Users' groups may be good places to find people who know about programs for your computer. Good users' groups will keep you up-to-date on new releases and put you in touch with people who have programs of interest to you. Your computer's manufacturer or a local computer store may know of a users' group in your area.

WHEN YOU GO SHOPPING . . .

Go to more than one store. If you've already found a dealer you trust, this isn't so important. Kent Willetts buys most of his software at one store because he's found the people there to be reliable and informed. But June Holbrook, an accountant, says she shops around for prices, "and I tell them I'm shopping around." Giving herself time to go to more than one store allows her to get the most for her money and to hear more than one dealer's perspective on a program.

Be open-minded. Yes, you should know what you want before you go shopping, but don't be inflexible. At

the store, you may find a program that you've never heard of before, and maybe that program is better suited to your needs than the one that you were planning to buy.

Be cautious. It's not that software salespeople are sneaky or disreputable—they rarely are. But sometimes they speak with a tone of authority without really knowing what they're talking about. On several occasions, I've been given incorrect information about programs I knew about or overheard dealers telling other customers things I knew were misleading, if not wrong. A couple of times, when I stepped in to correct them, the dealers were obviously grateful to hear from someone who knew the program.

If a retailer says you need "this exciting new feature," wait and think about it. It may be a frill you don't need (Do you really need a special option that tells you exactly how many words are in your document?), or it may be the feature that makes the program worth the extra \$10 to you.

Find a store geared to your taste. Composer Bailin, for example, doesn't even go to computer stores to look for music software; he goes to music stores, where, he finds, they have a more complete selection of programs. "A lot of music software needs a synthesizer," he explains, "which is why most regular stores can't demo it." On the other hand, Kent Willetts's favorite store doesn't have the widest selection, but he doesn't mind. "They don't carry software—even best-selling software—if they don't like it," he says. As a result, he feels comfortable with the selection they do carry.

Ask for a demonstration. "Make sure you've seen what you're going to buy," advises Willetts, "because there are a lot of things out there that aren't what they're supposed to be." Bailin agrees: "Get a demo and try to use it yourself to see if you really like it. You don't actually know what you have until you use it."

However, this isn't always possible—particularly if you shop at a discount store. Some software dealers don't like to demonstrate a program if it means taking the cellophane off of the package.

Gerard Morneau, of Nashua, New Hampshire, believes demonstrations are the key to making software buying decisions. He won't buy software at discount houses because he wants to be able to see the programs and talk to people who really know what the programs are capable of doing.

Some people will go to a computer store to get a demonstration of a pro-

gram, and then buy it at a discount store. This poses an ethical problem: Without our business, the stores that take the time to demonstrate programs would be forced out of business, and they're hard enough to find as it is.

BEFORE YOU BUY . . .

Check memory/peripheral requirements. Be wary of programs that require you to change or expand your system. There may be a program that does what you need without such a change; more isn't always better.

Examine the packaging. When the salesperson hands you the program, look over the packaging. Be sure the box is in good condition and that it hasn't been tampered with.

Check the specifications listed on the box. On what machine does the program run? Does your computer have enough memory? Are additional peripherals required? Read the features that the software publisher has included on the box. You may discover that the salesperson was wrong about something.

Look for a reputable publisher. The software publisher should still be in business so you can call if you have problems with the program. For most of us, support is an important issue. Holbrook bought an amortization program that didn't print, but because the publisher was still around, she was able to write to it and explain the problem. The company sent her a new copy of the program.

Insist on a good return policy. You should be able to return the program in case it doesn't work right or at all. This is another reason why Morneau won't buy at discount stores that won't take back faulty merchandise.

One time, Kent Willetts, an Apple IIc owner, saw a program being demonstrated on a IIc that was supposed to work on the IIc as well, according to the package. When he got it home, he discovered otherwise: One whole section wouldn't work on the IIc. Because his store takes returns, he was able to exchange it for another program.

If all this sounds like a lot of work, that's because it is. Especially in the beginning, shopping for software *should* be hard work. But, as with most things, the more you do it, the better you'll get and the easier it will become. If you find yourself increasingly satisfied with the software you buy, that could mean better grades for your children, more fun playing games, or higher profits in less time for your business. 

PARENTS!
TEACHERS!
KIDS!

BE A WINNER IN OCTOBER.

Join Computer Learning Month

WHY A COMPUTER LEARNING MONTH?

Learning with computers is giving America's youth the winning edge. Never before has there been such an exciting event devoted exclusively to bringing parents, teachers and kids together for a month-long celebration of learning with software and computers.

It's called Computer Learning Month, and it's happening this October. Computer Learning Month is so important that a commemorative bill has been introduced into both Houses of Congress declaring October 1987 as Computer Learning Month. Sponsored by major educational software and computer companies and supported by national educational organizations and State Departments of Education, Computer Learning Month will be an event in which everyone will be a winner – an event you won't want to miss.

EVERYONE WILL BE A WINNER...

Contests! Contests! Contests! Thousands of dollars worth of great prizes will be given away in October. Essay and art contests for families and kids. Lesson plan contests for teachers. And if you are a prize winner, your school will be a prize winner, too.

Exciting programs for families. Now parents can learn how to help their children benefit from using a computer, whether they own one or not. We're giving away a free booklet designed just for parents. There will be fairs and special events sponsored by local retailers. And we know

schools will be hosting special parent nights.

A month full of activities for teachers.

Teachers can join in the celebration easily and learn new ways to help their students benefit from using computers. Every teacher can receive a celebration poster, chock-full of lesson plan ideas, activities and much more.

IT'S EASY TO BE A WINNER.

Just clip this coupon and send it in today to be a part of this national event.

We'll send you everything you need so you can be a winner in Computer Learning Month. Don't delay. We must receive your coupon by

July 1,
1987.

**Giving America's
Youth the Winning Edge.**

PREVIEW:

THE IBM PERSONAL SYSTEM/2

MOVING PAST THE PC, IBM BRINGS A NEW LINE OF COMPUTERS TO MARKET. HERE'S A LOOK BEYOND THE FUSS.

BY BERNADETTE GREY

This is the year of the customer," an IBM spokesperson announced at a press conference to introduce the company's new line of computers, the Personal System/2. Although the name keeps the "personal" (but drops the "computer"), only one of Big Blue's four new models is likely to be talking to consumers. You'll have to decide if America's computer giant has reassured you that it's looking out for your investment in its technology.

While it's clear that IBM plans to leave the \$1,000-and-under market and price war to others, these new machines offer an array of features to individuals and small-volume entrepreneurs as well as to giant and mid-sized corporations and schools. The assurance that most existing MS-DOS software will work on the more powerful machines is important news for people who work in or run an IBM-stocked office.

The Model 30, with a list price of \$1,695, could—with its accelerated speed and vastly improved graphics—

BERNADETTE GREY is associate editor of FAMILY COMPUTING.

give rise to an extensive library of software aimed at the education, home-business, and personal productivity markets. Then, large numbers of consumers and educators might start buying Model 30s instead of Apple's IIs (today's school leader) and Macintoshes or PC clones.

The Personal System/2 could thereby eliminate many "either/or" decisions. Gone would be such choices as work versus play and office versus school compatibility. Parents who want to run a home-based business or bring work home from the office and provide computer-based learning for their children would find software to meet their needs and the color required for most educational programs and entertainment packages. This means a lot of users would feel they *could* have it all.

While the old cliché "You won't get fired for buying IBM" may not be true 100 percent of the time, it's certainly less likely that you'll lose your job or squander your money on an orphan if you go with IBM.

Read on to learn what "going with IBM" is likely to mean in the future

IBM's Personal System/2 Model 30 has sharp graphics, a small footprint, and two 3.5-inch disk drives.

The basic system comes without a monitor or a mouse.

and how it compares with the past. Before claiming success, IBM must get you to its dealers. That already makes the company right about at least one thing: This is your year—the year of the customer.

THE MODEL 30: STARRING IN YOUR HOME AND HOME OFFICE

In 1981, when IBM first unveiled its Personal Computer, very few people considered buying them for use in their homes. The company itself predicted total lifetime sales of under 250,000 units. Even the most visionary computer-industry gurus didn't see the future success of IBM's PC, with its original 16K of memory and \$3,200 price tag.

But software applications multiplied, attitudes towards high technology changed, and the price/performance ratio of computers improved

EDITOR'S NOTE: Look for a hands-on review of the Model 30 in an upcoming issue.

A CLOSER LOOK AT THE MODEL 30

MICROPROCESSOR: Intel 8086
SPEED: Processes data at a clock speed of 8 MHz
MEMORY (RAM): 640K
OPERATING SYSTEM: IBM PC DOS 3.3 (not included: \$120)
COLOR & GRAPHICS CAPABILITIES: Up to 256 colors (or 64 shades of gray) at one time from a palette of over 256,000 colors at 320 x 200 resolution
BUILT-IN PORTS: Serial, parallel, analog RGB, pointing device (e.g., mouse)
EXPANSION SLOTS: Three
DISK DRIVE: Two configurations: two 720K 3.5-inch or one 720K 3.5-inch and one 20MB fixed drive
KEYBOARD: 101 keys, including 12 function keys, numeric keypad. (This keyboard is now standard on all IBM machines.)
MONITOR: Not included in basic unit. (monochrome available for \$250; color for \$595-\$1,550)
SOFTWARE INCLUDED: Start-up disk
WEIGHT: 17 pounds
DIMENSIONS: 4" H x 16" W x 15.6" D
WARRANTY: 12-month limited warranty
LIST PRICE: \$1,695-\$2,295

dramatically. Winning the role as the industry standard, the IBM PC became a star.

Now, six years later, the long-awaited and much-talked-about Personal System/2 line is fighting for center stage. Of the four new computers, the Model 30 is the one most likely to fulfill your needs for home/home-office use and for your child's educational uses. Faster, flashier, and smaller than the IBM PC/XT (see *comparison box below*), the Model 30 is available in two configurations: with two 720K 3.5-inch disk drives for \$1,695 or with one 720K 3.5-inch disk drive and one 20MB fixed drive for \$2,295. (Add to these basic configurations the required DOS 3.3 [\$120] and a monitor [\$250 for monochrome; \$595 for lowest-priced color].)

The Model 30 comes with 640K of RAM and has a smaller footprint than the PC, partially because IBM re-

Sharper and more realistic images as well as a wider range of colors expand the Personal System/2's effectiveness for business, education, and recreational applications.

moved five space-consuming expansion slots in favor of built-in ports. The machine also has graphics capabilities that will take your breath away; it's now the main contender against the Macintosh in the desktop-publishing arena.

HOUSE LIGHTS DIMMING ON 5.25-INCH DISKS?

Also in sync with the Mac, Amiga, and Atari ST styles, IBM has switched to sturdy, pocket-sized, plastic 3.5-inch disks. While IBM has deep-sixed the 5.25-inch floppy with an external disk drive, the entire Personal System/2 line will run most 5.25-inch IBM PC software. This is good news for current PC owners who later might want to upgrade to the Personal System/2. IBM can't and won't ignore the huge base of IBM PCs and compatibles. They have already announced several options to let PC owners exchange data back and forth between the two families of machines.

Moving up to 3.5-inch drives should be an easy process for most publishers. Some, including Software Publishing Corp., Borland International, and Ashton-Tate, have already made their MS-DOS programs available in both 3.5- and 5.25-inch versions. However, down the road, despite compatibility, IBM PC and clone owners may long for the newer technology when they come across new Model 30 programs with knockout graphics that won't run on their older machines.

COLOR AT NO EXTRA COST

Software designers who create new packages for the Model 30 are sure to take advantage of the machine's built-in visual capabilities—particularly the ability to display up to 256 colors at one time. Most who've seen the machine were impressed with the clearness and sharpness of text and graphics. Some of the digitized images that we've seen are amazingly lifelike.

Even if you purchase a monochrome monitor for the Model 30, you'll be able to use color software. The monochrome monitor for the new machine will show color as 64 shades of gray. On the downside, if you already own a PC-compatible monochrome or color monitor, it won't work with the Model 30. You must buy one of IBM's newly introduced displays, at least for now.

Now that IBM has pushed the graphics capabilities of its Model 30 up to Mac-level, the Mac has a formidable opponent on the desktop-publishing court. IBM is trying to woo

THE DRAMATIC DIFFERENCE

	IBM PC/XT Model 278	IBM Model 30
List price	\$1,545	\$1,695
Microprocessor	8088	8086
Clock speed (MHz)	4.77	8.0
Memory (RAM)	256K	640K
Display	None	Built-in enhanced color and graphics. Up to 256 colors displayed at once.
Built-in ports	None	Serial, parallel, analog RGB, pointing device (e.g., mouse)
Clock/calendar	None	Built-in; battery powered
Dimensions	5.5" H x 19.6" W x 16.1" D	4" H x 16" W x 15.6" D
Disk drives	Two 360K 5.25-inch	Two 720K 3.5-inch
Warranty	90 days	One year

Total Sales

(Year To Date 1987)

away some Mac fans by offering the 30 as part of a \$8,553 hardware/software desktop-publishing package. Called SolutionPac Personal Publishing System, the highlights of the package are a Model 30 with a hard-disk drive and a monochrome monitor, IBM's new Personal Pageprinter laser printer, *PageMaker* from Aldus Corporation, Microsoft's *Windows*, and IBM PC DOS 3.3.

IS IT CURTAINS FOR CLONES?

And what's next for the drove of Asian and U.S. clones whose makers have made their fortunes beating IBM's prices and making the PC more affordable? With its personal-computer makeover, has IBM thwarted competitors from making copycats as many had feared? It doesn't look that way.

For now, there's bound to be some turmoil. Several Personal System/2 features are difficult to clone. Yet, competitors indicate that the machine can, indeed, be copied; some are saying it's just a matter of months. And priced at more than \$2,000 when a monitor and DOS 3.3 are included, the Model 30 can surely be undercut by clones.

A FAMILY ACT

While for home-office or family use you might be interested mainly in the Model 30, you should look at the whole line of Personal System/2 products—aimed at larger corporate customers. With features that promise easy linkups to mainframe computers, the new IBM family could very well be a hit with the Fortune 500.

IBM's three other new computers, the Models 50, 60, and 80, will be able to take advantage of a new, but as-of-yet-unreleased, operating system called Operating System/2. The Model 50, a 1MB machine (expandable to seven), has a 20MB hard-disk drive and carries a list price of \$3,595, while the 1MB Model 60, which can be expanded to 15MB, has a 44MB hard-disk drive and sells for \$5,295-\$6,295. And the Model 80, with 1- or 2MB of standard memory (expandable to 16MB), will sell for \$6,995-\$10,995.

At the same time, IBM is cutting prices on its older models, most of which are no longer being manufactured. Even the list price of the frequently cloned PC/XT Model 278—which will still be manufactured—has dropped from \$2,295 to \$1,545. In turn, some PC-compatible manufacturers who stick with the market will have to slash their prices. That's good news for people who decide they still want an IBM PC or compatible.

THE SUPPORTING CAST

Big Blue has also introduced an entourage of software and hardware products to support its new system, including assorted printers and musical and speech-synthesizer cards.

Five new printers are compatible with the Personal System/2 and the older personal computer line: three models of the IBM Proprinter, a faster Quietwriter printer, and a laser printer (connects only to the Personal System/2). The \$549 IBM Proprinter II is a dot-matrix printer with a near-letter-quality switch. The IBM Pro-

printer X24 (\$799) and XL24 (\$1,049), with 24-pin printheads, include a letter-quality switch, a quiet-mode switch, and a pitch-font selection switch. The IBM Quietwriter III (\$1,699) is a fast and quiet non-impact, thermal-transfer printer that prints in letter quality. And the Personal Pageprinter (\$2,199) is a laser printer that produces very high-quality text and graphics suitable for desktop publishing.

For musicians and music students, IBM has introduced its own optional music adapter card (\$495). The IBM Music Feature lets users play up to eight sounds (16 sounds with two cards) simultaneously. And users can add voice capabilities—speech to data and data to speech—to Personal System/2 machines using certain software with IBM's new \$345 Speech Adapter.

A LEADING ROLE IN THE FUTURE OF PERSONAL COMPUTING

So what does the Personal System/2 mean for the future of the computer industry? Big Blue is known for letting others dip their little toes into untested waters and then claiming those waters once they've been proven to be safe. The introduction of the Personal System/2 demonstrates this defensive plan of attack.

IBM has turned toward powerful graphics, 3.5-inch disk drives, a smaller footprint, and a mouse port—features previously included by companies such as Commodore, Apple, or Atari. (The Amiga, Macintosh, and ST include a mouse in the base configuration; the mouse for the Personal System/2, however, is optional [\$95].) That IBM, the industry leader, has acknowledged the importance of these state-of-the-art features means that the whole industry is taking a step forward.

While no one can do more than guess at the future success of IBM's personal-computer makeover, it's likely to have an evolutionary effect on how people use the personal computer. When technologically impressive (although expensive) products like the Personal System/2 are brought to market by the cautious giant, it means a change for the entire industry. We have to agree with William Lowe, IBM's Vice President and President of the Entry Systems Division, who said at the announcement: "IBM has introduced not just a new addition to the IBM family of products, but a whole new platform on which to build the future of personal computing." ■

Electric Pencil PC™

Simply the Best Value in Wordprocessing Today

With as many features as wordprocessors selling for 10

times the price, Electric Pencil PC was designed to be sophisticated enough for the professional user yet simple enough for the beginner. Our "Quick Start Guide" will have you writing, editing, and printing in less than 20 minutes. Once you have the basics, any of 500 functions are available with a simple key-stroke. The on-screen help and extensive tutorial windows are like having a manual on disk.

There may be only two methods left for writing: a no. 2 pencil or the power of Electric Pencil PC. You'll be impressed with this full-featured wordprocessing system at a revolutionary price . . . we guarantee it!

- Supports DOS 2.0 (or higher) directory structure
- On screen underlining & bold with monochrome (colors on color monitor)
- Set screen, text, underlined, bold & marker colors
- All prompts in English (no codes or numbers)
- Recover last delete from cut and paste buffer
- Built in disk file recovery
- Definable function keys
- All "wordprocessing keys" are used
- Designed especially for the IBM PC & compatibles
- Definable screen width
- Embedded printer control commands
- Automatic character translation
- Repeat function
- Chain disk files when printing
- Append files in memory
- Include files from disk within text
- Verify option with load & exit
- Centering
- Conditional paging and page numbering
- Remark command in text
- Print any part of text or range of pages
- Over 80 individual on line help windows
- DOS or expanded keyboard buffer
- Toggle between main/alternate text files
- optional ASCII file save/load
- Parallel & serial drivers (RS-232)
- "Pause" command in text
- Single word spell check
- Customize dictionary
- Auto-learn & correct misspellings
- Build "specific" dictionaries
- Auto hyphenation, user defined
- Dvorak, French, German & Spanish keyboard drivers
- Automatic file backup
- Runs on floppy or hard disk
- Keyboard macros
- Automatic key entry files
- Simple 1 or 2 key command structure
- Multiple search & replace functions
- User timed auto-file save
- 270 page 2 color manual
- Split screens (up to 6)
- Right justification
- 3 1/2 in. disk available

- ☒ PRINT PREVIEW TO SCREEN
- ☒ FULLY MENU DRIVEN
- ☒ 100,000 WORD DICTIONARY
- ☒ EXTENSIVE ON SCREEN TUTORIAL WINDOWS
- ☒ NOT COPY PROTECTED
- ☒ WORKS WITH ANY PRINTER
- ☒ MULTI-LINE HEADERS & FOOTERS
- ☒ RE-DEFINE ENTIRE KEYBOARD

WINNER OF THE GOLD MEDAL & PROGRAM OF THE YEAR AWARD, CREATIVE COMPUTING MAGAZINE

MONEY BACK GUARANTEE

Electric Pencil PC is unconditionally guaranteed for 30 days (less shipping). There is a \$10.00 restocking fee if the disk envelope seal is broken.

SOFTWARE GUIDE

Welcome to FAMILY COMPUTING's Software Guide, the most comprehensive listing available of two dozen of the newest, most noteworthy, and/or best programs on the market. Our reviewers include families from all over the country who have judged the software according to the following criteria: long-term benefits and applications, adaptability, and advantages of using a computer for a given task. Programs have been evaluated and rated for their performance in each of the categories listed below. More detailed reviews follow the chart. Unless otherwise noted, all programs are in disk format, and minimum memory requirements are 48K for Apple II series, 48K for Atari, 128K for IBM PC/PCjr or compatibles, and 128K for Macintosh. "Atari" alone denotes the 800/XL/XE series. "C 64/128" means the software will run on both a C 64 and a C 128 computer in C-64 mode; "C 128" alone means the software will run only on that machine.

Here's a rundown of the rating categories and what they mean: **O** = Overall performance, given the limitations and capacities of the particular computer for which the software is intended. **D** = Documentation, or the instructions and literature that accompany a program. **EH** = Error-handling, the software's capacity to accommodate errors made by the user—an especially important consideration with software for younger users. **PS** = Play system (in the games reviews), the quality of the game design and the game's playability. **GQ** = Graphics quality, also evaluated in light of each particular brand's graphics capabilities. **EU** = Ease of use after the initial learning period, which varies from computer to computer. **V** = Value for money, or how the software measures up to its price.

EDUCATION/FUN LEARNING

Title Publisher Price	Brief description	Hardware/ Equipment required	Backup policy	Ratings					
				O	D	EH	GQ	EU	V
LEARNING DOS Microsoft Corporation 16011 NE 36th Way Redmond, WA 98052 (206) 882-8080 \$50 ©1986	From the folks who make it, an interactive, on-line tutorial that teaches the essential DOS operations one screen at a time; all you'll need for starting off with an MS-DOS computer.† —MORGENSTERN	256K IBM PC.*	90-day warranty. Not copy-protected.	★ ★ ★	★ ★ ★	★ ★ ★	★ ★ ★	E - -	★ ★ ★
MATHTALK First Byte, Inc. 2845 Temple Ave. Long Beach, CA 90806 (213) 595-7006 \$50 ©1986, 1987	Various game formats and the novelty of synthesized speech work together to keep kids interested as they do serious drill work that would otherwise be boring. Best for ages 5-12. —SUMMERS	Reviewed on 512K Amiga. Also for Apple IIGs, Atari ST, Macintosh. Printer optional.	6-month warranty. \$10 for backup.	★ ★ ★	★ ★ ★	★ ★ ★	★ ★ ★	E - -	★ ★ ★
SCIENCE TOOLKIT MODULE 1: SPEED & MOTION Broderbund Software 17 Paul Drive San Rafael, CA 94903 (415) 479-1185 \$40 ©1986	Expands the original <i>Master Module</i> with photocells and experiments on speed and motion. As in real scientific procedures, you must be precise and spend quite a bit of time with each experiment to get worthwhile results. —SOLOMON	64K Apple. <i>Science Toolkit Master Module</i> . Printer optional.	90-day warranty. \$7.50 thereafter.	★ ★ ★	★ ★ ★	★ ★ ★	N/A - -	A - -	★ ★ ★
TEXT TIGER MindPlay 82 Montvale Ave. Stoneham, MA 02180 (617) 438-5454 \$40 ©1986	An introduction to keyboarding and word processing; especially geared to children, ages 7-10. Nothing special in any way, but it does what it's supposed to and is simple to use. —ZORNBERG	Apple.	Sold as is. \$10 for backup. \$5 for lifetime warranty.	★ ★	★ -	★ -	★ -	E -	★ ★
VENTURE MAGAZINE'S BUSINESS SIMULATOR Reality Technologies 3624 Market St. Philadelphia, PA 19104 (215) 387-6055 \$70 ©1986	A first-rate simulation of the financial decisions required to run a start-up company. It's as exciting as an adventure, but instead of learning spells, you master business strategies.† —MORGENSTERN	Reviewed on 256K IBM PC.* Planned for Apple IIGs, 512K Macintosh. 2nd drive. Color monitor recommended.	90-day warranty. Not copy-protected. 30-day money-back guarantee if bought from publisher.	★ ★ ★	★ ★ ★	★ ★ ★	★ ★ ★	A - -	★ ★ ★

RATINGS KEY **O** Overall performance; **D** Documentation; **EH** Error-handling; **GQ** Graphics quality; **EU** Ease of use; **V** Value for money; **O** Poor; **★** Average; **★★** Good; **★★★** Very Good; **★★★★** Excellent; N/A Not applicable; E Easy; A Average; D Difficult; † Longer review follows chart.

*Titles listed for the IBM PC/PCjr will also run on many IBM PC compatibles; owing to the proliferation of compatibles, check with the publisher of the program or your dealer for compatibility.

HOME BUSINESS & PRODUCTIVITY

Title Publisher Price	Brief description	Hardware/ Equipment required	Backup policy	Ratings					
				O	D	EH	GQ	EU	V
ANIMATE Broderbund Software 17 Paul Drive San Rafael, CA 94903 (415) 479-1185 \$70 ©1986	Create colorful animation sequences, put them to music, and write your own stories. The "toolkit" (filled with options) can overwhelm a novice designer, but with patience, you can get great results. —ELTGROTH	128K Apple IIe/IIc/IIgs. Mouse, joystick, KoalaPad. 2nd drive, color monitor recommended.	90-day warranty. \$7.50 thereafter. \$10 for backup.	★ ★ ★	★ ★ ★	★ ★ ★	★ ★ ★	A ★ ★	★ ★ ★
FLEET SYSTEM 4 Professional Software Inc. 51 Fremont St. Needham, MA 02194 (617) 444-5224 \$80 ©1986	Combines a full-featured word processor (with dictionary and thesaurus) and a basic data base. Everything worked flawlessly, but the lengthy command sequences are cumbersome to use. —ZORNBERG	C 128. RGB or 80-column composite monitor. 2nd drive optional.	Sold as is. \$15 for backup (no backup for data base).	★ ★	★ ★	★ ★ ★	N/A ★ ★	D ★ ★	★ ★ ★
GRAPHICWRITER DataPak Software, Inc. 14011 Ventura Blvd., #507 Sherman Oaks, CA 91423 (818) 905-6419 \$150 ©1986	The first word processor just for the IIgs is combined with a paint program, which lets you mix color and graphics in your documents. But it can be illogical to use (I lost files twice), and the manual lacks important details. —FRANK	512K Apple IIgs.	90-day warranty. Free backup (if warranty card is sent in).	★ ★	★ ★	○ ★ ★	★ ★ ★	A ★ ★	★ ★ ★

Title Publisher Price	Brief description	Hardware/ Equipment required	Backup policy	Ratings						
				O	D	PS	GQ	EU	V	
ALIENS Activision 2350 Bayshore Parkway Mountain View, CA 94043 (415) 960-0410 \$35 ©1986	An exciting arcade adventure that matches the nonstop action of its source material—last year's hit movie. Six sequential mini-games re-create the ordeals of Ripley and her team of space marines.† —DELSON	C 64/128. Joystick. Color monitor.	90-day warranty. \$7.50 thereafter.	★ ★ ★ ★	★ ★ ★ ★	★ ★ ★ ★	★ ★ ★ ★	A	★ ★ ★ ★	
FIST: THE LEGEND CONTINUES Mindscape, Inc. 3444 Dundee Road Northbrook, IL 60062 (312) 480-7667 \$30 ©1986	Two people can compete in this kung-fu action game's training mode; or one player can complete the arcade adventure, seeking magical scrolls while tracking down the Warlord. —ADDAMS	C 64/128. Joystick(s).	90-day warranty. \$13 for backup.	★ ★ ★	★ ★ ★	★ ★ ★	★ ★ ★	A	★ ★ ★	
GUNSHIP MicroProse Software 120 Lakefront Drive Hunt Valley, MD 21030 (301) 771-1151 \$35 ©1986	Flying an Apache AH-64 helicopter gunship is the core of this exciting, edge-of-your-seat simulator. Provocative scenarios pit you against peoples who may not be enemies.† —DELSON	Reviewed on C 64/128. Planned for 64K Apple, Atari, Atari ST, IBM PC/PCjr.* Joystick recommended.	90-day warranty. \$10 for backup.	★ ★ ★	★ ★ ★	★ ★ ★	★ ★ ★	D	★ ★ ★	
MAKE YOUR OWN MURDER PARTY Electronic Arts 1820 Gateway Drive San Mateo, CA 94404 (415) 571-7171 \$33-\$40 ©1986	Prints all the clues, dialogue, evidence, invitations, and other items needed to host a "who-dunnit" party in which guests assume the roles of characters. The program is not used during the game. —ADDAMS	Reviewed on Apple. Also for C 64/128, IBM PC/PCjr.*	90-day warranty. \$7.50 thereafter.	★ ★	★ ★	★ ★	N/A	E	★ ★	
MERCENARY: ESCAPE FROM TARG Datasoft/IntelliCreations 19808 Nordhoff Place Chatsworth, CA 91311 (818) 886-5922 \$30-\$40 ©1986	An offbeat hybrid that combines a spaceship flight simulator with an explore-the-maze graphic adventure that occurs on an alien planet and has three alternative solutions for extra replays. —ADDAMS	Reviewed on C 64/128. Also for Atari, Atari ST.	90-day warranty. \$7.50 thereafter.	★ ★	★ ★	★ ★ ★	★ ★ ★	A	★ ★	
OGRE Origin Systems 136 Harvey Road, Bldg. B Londonderry, NH 03053 (603) 644-3360 \$40 ©1986	Set in the 21st century, when OGRE (a cybernetic tank) is master of the nuclear battlefield. Can be enjoyed by beginners because play is straightforward. —DELSON	Reviewed on C 64/128. Also for Amiga, Atari, Atari ST, 64K Apple, 256K IBM PC,* Macintosh. Joystick, mouse recommended.	90-day warranty. \$5 thereafter.	★ ★ ★	★ ★ ★	★ ★ ★	★ ★ ★	A	★ ★ ★	
PORTAL Activision (see above for address and phone) \$40-\$50 ©1986	As a space traveler, you return to an Earth devoid of humans. With the help of Homer (a computer terminal), you unravel the mystery in this "novel." —DELSON	Reviewed on C 64/128. Also for Amiga, Apple, IBM PC,* Macintosh. Joystick, mouse.	90-day warranty. \$7.50 thereafter.	★ ★ ★	★ ★ ★	★ ★ ★	★ ★ ★	A	★ ★ ★	
RADIO BASEBALL Electronic Arts (see above for address and phone) \$40 ©1986	You're the manager in a text-only baseball game with a variety of real teams and fantasy all-star squads. Each play is "called" by the computer. —DELSON	256K IBM PC/PCjr.*	90-day warranty. \$7.50 thereafter.	★ ★ ★	★ ★ ★	★ ★ ★	N/A	A	★ ★ ★	
STAR TREK: THE PROMETHEAN PROPHECY Simon & Schuster Software One Gulf & Western Plaza New York, NY 10023 (212) 333-5800 \$33-\$40 ©1986	You become Captain Kirk in this all-text adventure, and you must beam down to an unexplored planet to find food for your crew. This requires interacting with an alien culture and ultimately saving them, too. Evocative and tough.† —ADDAMS	Reviewed on 64K Apple. Also for C 64/128, IBM PC/PCjr.*	30-day warranty. \$5 for 11 months thereafter.	★ ★ ★ ★	★ ★ ★ ★	★ ★ ★ ★	N/A	A	★ ★ ★ ★	
WORLD BUILDER Silicon Beach Software 9580 Black Mountain Rd. San Diego, CA 92126 (619) 695-6956 \$80 ©1986	I've tinkered with all the "write-your-own-adventure" programs, and no other makes the process as easy or yields such professional results. —ADDAMS	512K Macintosh.	90-day warranty. \$5 thereafter. Not copy-protected.	★ ★ ★	★ ★ ★	★ ★ ★	★ ★ ★	A	★ ★ ★

You asked for it. You got it!

A COLLECTION OF OVER 200 SOFTWARE REVIEWS FROM FAMILY COMPUTING:

**PREMIER
EDITION**

The Annual Software Review

An invaluable, at-your-fingertips shopping guide containing all the facts you need to make the best possible software buying decisions.

You told us you liked our regular monthly software reviews but you needed more. Well, here it is. Introducing the first ANNUAL SOFTWARE REVIEW — a composite "hit parade" of more than 200 of your favorite programs reviewed this past year in Family Computing.

Now, in one place, in one issue, you've got it all. Updated software descriptions. The latest prices. A fresh look at the classics. Warranty information. Expert ratings of performance, documentation, graphics, and value. Plus in-depth reviews of many of your other favorites.

SEE FOR YOURSELF WHY THE ANNUAL SOFTWARE REVIEW IS A MUST FOR EVERY COMPUTER-WISE FAMILY

FIND WHAT YOU WANT THE EASY WAY. It's a cinch to find your way around THE SOFTWARE REVIEW. Programs are indexed alphabetically, by application, and by computer. So you can head directly for the program you want, comparison shop, or just browse.

GET ALL THE INFORMATION YOU NEED IN ONE CONVENIENT SOURCE. We cover every base: business/productivity, education and entertainment. You'll find programs for the Apple, Atari, Commodore, Tandy, IBM PC & Compatible Computers.

SAVE TIME. No more searching for clippings of reviews or old issues. No more wasted time in stores trying to find the program right for you. THE ANNUAL SOFTWARE REVIEW puts everything you need at your fingertips so you can make the right buying decisions every time.

SAVE MONEY. For only \$3.95 (plus postage and handling), you'll have all the information you need *when you need it*. What's more, the REVIEW is packed with useful information you can use with software you may already own.

THE ONLY GUIDE OF ITS KIND. Our unique long and short reviews give you the kind of comprehensive, in-depth information unavailable anywhere else.

HAVE A NEW LOOK AT THE "OLDIES BUT GOODIES." Get updated reviews of the classics: popular software that's stood the test of time.

DELIVERED TO YOUR DOORSTEP. Don't run the risk of not finding THE ANNUAL SOFTWARE REVIEW on your newsstand. To reserve your copy, just fill out and mail the coupon along with your check or money order to the address below:

yes

Please send me _____ issues of THE ANNUAL SOFTWARE REVIEW at \$3.95 each plus \$1.00 for postage and handling. You can expect delivery within 4-6 weeks.

SOFTWARE REVIEWS

On the following pages, you'll find in-depth reviews of some of the programs listed in the Software Guide. Refer back to the Guide on page 49 for information such as backup policies and addresses of software publishers.

EDUCATION/ FUN LEARNING

Learning DOS

HARDWARE REQUIREMENTS: 256K IBM PC.

PUBLISHER: Microsoft Corporation

PRICE: \$50

PUBLISHER'S SUGGESTED AGES: 16+

Microsoft, the company that brought the dreaded A+ prompt into the world, has recently produced an easy guide to deciphering the complexities of MS-DOS. It's a disk-based tutorial that teaches all the essential DOS operations (one screen at a time), with interactive practice sessions, on-line help, and a how-to-get-the-job-done attitude that omits the wealth of technical detail that can delight advanced users, but scare newcomers.

Learning DOS comes on three disks. One disk contains a version of the course tailored to hard-disk users; another has a course for floppy-based systems; and the third is a ready reference guide. By typing "Help" at the DOS prompt—with this reference disk in your drive—you get a well-indexed, fairly comprehensive guide to DOS commands.

The course lessons are well-organized and efficient without being terribly exciting. Then again, I frankly can't imagine how DOS could ever be made exciting. There are some decorative graphics, but nothing gimmicky—just straightforward, logically organized lessons.

There are a few annoyances in the lessons. The program is more picknickety than DOS itself when it comes to spacing between words in a command. The program also has an annoying habit of supplying the correct answer as soon as you make a mistake in a practice session, without first letting you know you goofed and giving you a chance to work it out. Still, these are minor problems.

For starters, *Learning DOS* will teach you as much about the subject as you'll need to know. However, a good book on the subject is definitely in order as well. In fact,

Microsoft Press offers a very nice volume called *Running MS-DOS*. I wish it had been included with the software package; that would have made it a much better value.

—STEVE MORGENSTERN

Venture Magazine's Business Simulator

HARDWARE REQUIREMENTS: 256K IBM PC.

PUBLISHER: Reality Technologies

PRICE: \$70

PUBLISHER'S SUGGESTED AGES: 16+

Even if you don't have an MBA, read *The Wall Street Journal*, or wear three-piece suits, you should enjoy this richly detailed economic simulation. Not that an MBA wouldn't help: As you progress through five levels of decision making, the range of choices grows increasingly complex, and the wealth of information can be intimidating at times. Still, even a liberal-arts graduate like myself was able to learn more about the concepts and practices of business finances with no motivation other than the intense desire to beat the pants off Hewlett-Packard and dominate the East Coast market. What higher praise can I offer for a business-simulation program?

The game pits five companies against each other in marketing up to three different new products—for example, household robots. One or two people can play, with the computer calling the shots for the remaining companies. The early rounds consist of setting your price, your advertising budget, and the number of products you'll buy from an overseas supplier. Soon, though, you must start making the goods yourself, which means building and running a factory—and that requires raising money through a variety of financial means, such as the sale of bonds or stock. If you survive long enough, you'll need a sales force and money for Research and Development. The next level involves expanding your product line, which causes competition for resources within your company. Finally, if you last long enough, you face the challenges of expanding with new products and into new geographical markets.

The heart of the program is an in-depth simulation of a complete economy prepared by faculty members from the Wharton School in Philadelphia. In fact, versions of this program are used in business schools

and corporate training programs.

I wished I had received more background information since the package is aimed at consumers; the kind of in-depth factual documentation provided with *Flight Simulator* would have been appropriate. Nevertheless, it is hard to fault a program that makes financial management this exciting.

—STEVE MORGENSTERN

HOME BUSINESS & PRODUCTIVITY

MindWrite

HARDWARE REQUIREMENTS: 512K Macintosh.

PUBLISHER: MindWork Software

PRICE: \$125

MindWrite is a good, mid-level word processor and outliner for the Macintosh. In some circles, software of this sort is called an "idea processor." But whatever you call it, the process is straightforward: First you develop a preliminary outline of your ideas, and then you use the outline to structure the writing. As new ideas occur, you can flip back and forth between the outline and text, making appropriate changes. If your thinking veers in new directions, you simply rearrange the sections of the outline, and the corresponding text follows suit.

These are all capabilities that can be found in most idea processors, and they are all available in *MindWrite*. But *MindWrite* offers some additional features that make it stand out from the crowd. For example, *MindWrite* gives you a seamless integration between word processor and outliner; both are active in a single document, so you no longer have to move from one mode to the other. Any changes in documents are marked with the date, so that you can later retrieve only those changes that were made on or after a particular date. You can even search for a particular word or phrase and have *MindWrite* separately save all the text that includes that material—a great feature if you want to focus on just one idea or concept and see how you've dealt with it throughout.

However, some of *MindWrite*'s limitations are surprising. For example, there are no provisions for automatic footnoting, indexing, or alternate odd/even-page header and footer arrangements; these would be helpful

CONVERSE WITH YOUR COMPUTER

AT LAST! A FULL IMPLEMENTATION of the original ELIZA program is now available to run on your personal computer!

Created at MIT in 1966, ELIZA has become the world's most celebrated artificial intelligence demonstration program. ELIZA is a non-directive psychotherapist who analyzes each statement as you type it in and then responds with her own comment or question—and her remarks are often amazingly appropriate!

Designed to run on a large mainframe, ELIZA has never before been available to personal computer users except in greatly stripped down versions lacking the sophistication which made the original program so fascinating.

Now, our new personal computer version possessing the FULL power and range of expression of the original is being offered at the introductory price of only \$45. And to let you find out how she does it (or teach her to do more) we have included the complete SOURCE PROGRAM (written in BASIC) at no extra cost.

Order your copy of ELIZA today and you'll never again wonder how to respond when you hear someone say, "Okay, let's see what this computer of yours can actually do!"

READ WHAT THE EXPERTS SAY ABOUT OUR VERSION OF ELIZA:
"Much more than a mere game... You'll be impressed with ELIZA... A convincing demonstration of Artificial Intelligence."
—PC MAGAZINE

"Delightful entertainment... An ideal medium for showing off your system."
—MICROCOMPUTING MAGAZINE

"ELIZA is an astounding piece of software... A fascinating program to use and study."
—BARON'S MICROCOMPUTER REPORTS

"ELIZA is a great way to introduce your friends to computers... A very funny party game."
—PETER A. McWILLIAMS

"ELIZA is an exceptional program, one that's fun to use, shows off your machine, and has great historical interest."
—POPULAR COMPUTING MAGAZINE

"This version of ELIZA is the best we have seen. As a party game, it is unmatched."
—HOME APPLICATIONS FOR THE C-64

ELIZA IS AVAILABLE IN THE FOLLOWING FORMATS:

- IBM PC, PCjr, PC-XT and all compatibles.
- All Apple II computers (II, II Plus, IIc, IIfx).
- Apple Macintosh (Microsoft BASIC required).
- Commodore 64 (specify disk or cassette).
- 5 1/4 inch or 8 inch disk for all CP/M systems.

All versions are \$45 and include a six page users manual.
Please add \$2.00 shipping and handling to all orders
(California residents please add 6 1/2% sales tax)

SOFTWARE REVIEWS

for most users. More surprising is the fact that only two symbols are provided for marking outline headings (either a diamond or legal-format section numbers such as 2.1 or 4.2), although paragraphs within the outline can be marked with bullets. Finally, while graphics from other software (such as MacPaint) can be imported, resized, and rearranged, text cannot wrap around the pictures. Instead, it stops above each picture and restarts below it.

Even though these limitations to MindWrite are worth thinking about, it's still a solid value that should be given serious consideration.

—TONY MORRIS

NewsMaster

HARDWARE REQUIREMENTS: 256K IBM PC.
PUBLISHER: Unison World
PRICE: \$100

NewsMaster is good news indeed. It offers an easy, responsive, and cost-effective way to create attractive newsletters, bulletins, announcements, and fliers. While it doesn't have all the features of a true desktop-publishing system, it costs a fraction of what most systems cost. I created multicolumned newsletters with attractive fonts and eye-catching graphics all before I spent my first hour with the program.

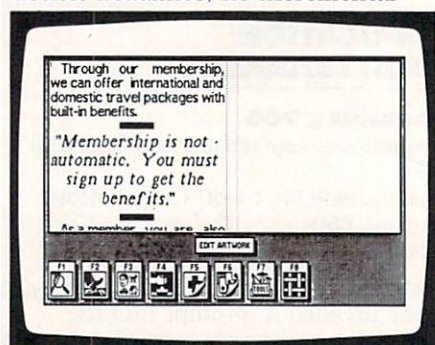

That's because NewsMaster's commands are menu-based and rely mostly on icons. And there are also text prompts that guide you through multistep commands such as shrinking or moving a graphic.

From the main menu, you may opt to deal with art or text. Select Art Edit and you can choose from over 250 excellently rendered pictures that are whimsical without being juvenile. Once selected, you stamp (with the stamp icon) the picture into your newsletter. Your text can wrap around the picture which can be enlarged, flipped, cropped, and surrounded with a border.

When you select Text Edit, a font menu awaits with 10 newsletter-worthy fonts in a number of sizes and boldface and italics. As you scroll through the list of fonts, a sample of each pops into view. You can also import ASCII text or use pictures from the two PrintMaster Plus Art Gallery disks (also from Unison World).

NewsMaster can't do everything. Multiple-page documents are possible, but difficult to manage. The pro-

gram's distinctive icon menus are best suited to be used with a mouse, but none are supported. The text-wrapping feature is primitively implemented, and elaborate newsletters can be tedious because you can have only limited control (for instance, no double headlines, no incremental

point sizes, and no orphan control).

NewsMaster's documentation is tutorial style, and the manual's tips on how to plan a good newsletter are helpful. NewsMaster is fun for the whole family and—provided you have minimum design sense—the program's results are good enough to be used for some professional situations, too.

—ROBIN RASKIN

Write Now

HARDWARE REQUIREMENTS: 256K IBM PC.
PUBLISHER: Airus, Inc.
PRICE: \$150

With its Clairvoyant mode, the Write Now word processor is a lazy typist's delight. When you type a word the program recognizes from its dictionary, the computer warbles and finishes the word automatically. Typing "hardw" and "diske," for example, will produce "hardware" and "diskette" on the screen.

The program contains several more interesting features based on what the publisher calls "intuitive processing." You can set the spelling checker to beep and highlight any misspelled word as you type; a window pops up with suggested corrections. And in the Spell Guard mode, the program beeps and will not allow you to continue until you've corrected the misspelled word.

I had mixed reactions to these clever features. As a computer hobbyist, I found the program quite fascinating. But as a touch typist and writer, I disabled the frills. The beeps, warbles, and automatic windows interrupted my train of thought. I prefer a basic word processor with a spelling check on the

SOFTWARE REVIEWS

Gunship

HARDWARE REQUIREMENTS: C 64/128.

PUBLISHER: MicroProse Software

PRICE: \$35

REVIEWER'S SUGGESTED AGES: 10 +

You are tense with anticipation as your Apache AH-64 gunship hovers behind a hill in West Germany, awaiting the chance to discharge a tank-busting missile against the invading Warsaw Pact troops. As you take a quick shot at an approaching formation, you see they are armed with the latest Soviet weaponry. You acquire your target, fire, veer left, let

loose a decoy or fire to divert the missiles they're firing at you, jink up and down to throw off the aim of their pursuit 'copters, and hope you'll be able to evade them.

In terms of action alone, *Gunship* is the best flying game we've ever played. It's fast-moving, requires careful planning and letter-perfect execution of each of the hundreds of special missions, and puts you in the seat of a heavily armed weapon of awesome potential. You really have to stretch to win this one.

Politically, however, you must be willing to stretch as well; the combat situations that *Gunship* places you in are not all historically accurate. Some are potential hot spots with targets and enemies that might be considered provocative. In order to enjoy the game's edge-of-the-seat excitement, one must be willing to overlook the moral implications of firing upon Nicaraguans, Cubans, Russians, Czechs, Poles, East Germans, Iranians, Iraqis, Lebanese, Syrians, Vietnamese, and other real or imagined enemies.

The game offers a variety of operations, each of which can be accomplished by arming your chopper with a specific configuration of weapons. As you progress from scenario to scenario, you will gain rank, prestige, honors, and, of course, more dangerous assignments.

Playing *Gunship* is a pulse-pounding experience, and if you can overlook the provocative nature of its scenarios, it could become one of your favorites.

—JAMES DELSON

Star Trek: The Promethean Prophecy

HARDWARE REQUIREMENTS: 64K Apple, C 64/128, IBM PC/PCjr.

PUBLISHER: Simon & Schuster Software

PRICE: \$33-\$40

REVIEWER'S SUGGESTED AGES: 10 +

The second text adventure based on the hit TV show *Star Trek* flies circles around the original. It is better designed, better programmed, and much truer to the spirit of the television series.

In the title screen, Captain Kirk quotes *Star Fleet Command*'s maxim regarding alien cultures: "You can look, but don't touch." Then you, as Kirk, find yourself commanding the Enterprise as it nears the planet Prometheus 4. Before you can say "Beam me down, Scotty," a Romulan warship attacks. If you win the subsequent space battle, Spock reports that leaking coolant from the phasers has contaminated the entire food supply, then suggests your only hope is to beam down to the planet and scout for food.

Now the atmosphere shifts to a new and subtle form of character play that I'll call cultural interaction. Living atop a mesa in a hostile desert, the Prometheans are a mysterious people divided into distinct castes: Traders, Defenders, Chanters, Sustainers, and Delighters. Your instruments indicate a vast supply of protein stored beneath the Prometheans' tower, but a Trader informs you that their leader (affectionately dubbed "The Afflictor") inexplicably allows them to eat for only one day per week. Observing the rituals of the Chanters, the psychic powers of the Sustainers, and other facets of Promethean life, you realize the key to obtaining the needed food hinges on unraveling the mysteries of this alien culture—and the significance of the Promethean Prophecy.

Star Trek's evocative prose faithfully portrays the television characters; for instance, Bones constantly squabbles with Spock, who remains as enigmatic as ever. Though dubious of the original *Star Trek* adventure, I found this one engaging and recommend it for all space adventurers.

—SHAY ADDAMS

completed document—an option that is also available.

It depends, as always, on your application. The program might be useful and fun for teaching word processing at the elementary and junior high levels. Although most operations require two keystrokes, *Write Now* is easy to use with its menus, windows, and help screens. I was happily typing a letter after about an hour with the well-written documentation.

Designed for short- to medium-length memos, letters, and reports, the program accommodates files up to 64K, holds roughly 20 single-spaced pages, and has more than adequate power for home or small-office use. It offers all the standard features, including headers and footers, page numbering, file- and mail-merge, cut and paste, and search and replace.

On the negative side, however, with only 256K, you must use the small 15,000-word dictionary. The 35,000-word dictionary requires 384K and still won't accommodate a large vocabulary; nonetheless, it's easy to add words to the dictionary. And at \$150, the cost is a bit steep for what's basically a simple word processor, although most other writing programs don't offer the same kind of help with spelling.

Aside from that, *Write Now* is an interesting word processor that is fun to operate and performs as advertised. Company support, in my case at least, was excellent. Instead of canned music, the first ring on the technical hot line produced a real person who could answer my questions about the package.

—BOB SWEARENGIN

ENTERTAINMENT

Aliens

HARDWARE REQUIREMENTS: C 64/128.

PUBLISHER: Activision

PRICE: \$35

REVIEWER'S SUGGESTED AGES: 8+

You don't always do what's best with your life, but sometimes you have no choice. Having been the sole survivor of a deadly encounter with slime-dripping, alien creatures seemed enough excitement for one lifetime, but Ripley has decided to return to the planetoid LV-426. She plans to avenge the deaths of her fellow crew members and rid herself of the

nightmares that mock her existence. So begins the game adaptation of last summer's hit movie *Aliens*.

This exciting arcade adventure is a match for the nonstop action of its namesake. Six sequential mini-games recreate the ordeals of Ripley and her team of space marines. You begin by steering a shuttle craft down to the planet, being careful to adhere to the proscribed flight path in order to land properly. Next, you must have four of your eight armed space marines fight their way out of the below-ground complex where they're surrounded by a swarm of aliens. Then, armed with a flame-thrower, you must fend off wave upon wave of aliens in the base operations room, keeping them at bay until the remnants of your team can cut an escape hole through the back door.

Next, with the aliens in hot pursuit, you have to find your way through a maze of ducts, trying to get back to the landing field so you can escape this living nightmare. Fifth, you go on a rescue mission to save the little girl believed to be the only colonist to survive the alien onslaught. Working against time, and with limited ammunition, you must find her and bring her to safety. And, in the end, you have your chance for revenge as you face off against the Alien Queen, who has turned all the colonists into eggs

that will eventually hatch into aliens like the ones you've been fighting.

Whew! This is one of the most exciting programs we have tested in four years of gaming at FAMILY COMPUTING.

Aliens creates a you-are-there feeling for players, who can work as teams or play solo. Five of the six scenarios are excellent; only the last encounter with the queen proved to be a slight letdown. Still, *Aliens* was highly recommended by all our play-testers.

POWER

FOR THE COMPUTER GENERATION

Show The Experts Your Earth-Shattering Game

When your friends come over, they couldn't care less about talking to you. They head straight for your computer to play *Quavering Quasars*, the great new game you've invented. Are they addicted? Then maybe it's time to show your creation to the experts.

Getting a program published by one of the big software publishers is tough, but not impossible. Ask **Will Harvey**, **Chris Gray**, and **Ray Tobey**—all software designers who made it big while they were teenagers. The competition is fierce, and software publishers accept very few game submissions. However, if you think you've designed something special, here are some things to consider before you send your program to a software company.

Is it fun? "The fun factor is probably most important," says John P. Manley, assistant producer of product admissions for **Electronic Arts**. "We keep asking the person who's reviewing the game if he or she is having fun."

Manley sums up the qualities **Electronic Arts** looks for in a game in three words: simple, hot, and deep. "Simple in that it's easy to learn, and you don't have to wade through a long manual; hot in that it uses the computer interactively—taking advantage of the computer's sound and graphics capabilities; and deep, in that you won't get bored really quickly—you want to keep playing it," explains Manley.

Peter Doctorow, **Accolade Inc.**'s vice president of design development, agrees that these criteria, es-

Mindscape's popular game, *Infiltrator*, was designed by Chris Gray when he was 17.

pecially the "simple" part, are important to a winning game. Doctorow looks for programs with short user manuals and prefers none at all.

Addictiveness is another key aspect in any great program. Sandy Schneider, vice president and creative director at **Mindscape** (the company that published Chris Gray's *Infiltrator* when he was 17), says that your friends' reactions can tell a lot about whether or not you have a winner on your hands. "If you hook them on something that you've created, you might as well send it to a publisher. Friends are pretty good indicators," she says.

Once you've fine-tuned and thoroughly debugged your masterpiece—and think it's ready to send off—study the publishers. It's important to know the types of programs each software company publishes. This way, you'll know where to target your work. Then, send away for the company's submission information and agreement. (Some publishers ask you to enclose a self-addressed, stamped envelope.) The information

the publisher sends back can contain valuable clues to the kinds of programs the company is looking for, as well as any necessary instructions like language and machine requirements.

In most instances, you must fill out a submission agreement before you send a disk to a publisher for consideration. Some software publishers won't even look at your program unless you've done this. Completing a submission agreement is an important prerequisite because it can protect you and/or the software publisher if any legal conflict—such as copy infringement—should ever arise.

What happens after you send in your creation depends on the company, but generally, one or more reviewers will look at it. If it makes the cut, it goes "upstairs" to people like Manley, Doctorow, and Schneider, who help make the final decision about what is published. Even if they reject your program, some companies give you valuable feedback—in person, by phone, or by letter.

So even though the software business is filled with talented and successful programmers (some still in their teens), the prospects of being published aren't totally bleak. Keep working on your programming skills and don't become discouraged if you're not initially successful. "Try to be original and be persistent. Keep at it," advises Manley.

Keep working at it, and who knows? *Quavering Quasars* could be the next megabestseller.

—KATHRYN BONN

STRATEGY

TIPS, TRICKS, AND HINTS

ALIENS

Activision. Arcade/Adventure. Your mission: Become the crew of the hit movie *Aliens*. Journey to planet LV-426 and eliminate aliens while attempting to keep your crew alive. (The hints and game are for C 64/128.)

Keep alert.

On the drop-ship level, concentrate on the yellow rings. Looking at both the yellow and blue rings is too distracting and makes it difficult to negotiate sharp turns. Also, keep an eye on the smallest ring on the screen and try to steer toward it.

On the Armored Personnel Carrier (APC) rescue attempt, move back and forth in the center of the board with the button down, killing all the aliens in a given direction. Don't follow the manual's advice, which is to charge forward, guns blazing.

On the same level, aliens won't attack if your men are in a group. Keep your crew together and make individual mad dashes to the APC.

Dietrich didn't take the Special Ks' advice.

When you're hot, you're hot.

In the Operations Room Ram-page, sustained fire will only give the creatures more time to slip by. Short bursts of fire allow you enough time to fend off the aliens. Beware! Slow-moving aliens are often decoys for faster-moving ones at the opposite end of the screen, so try to stay in the middle as much as possible.

In the Air Duct Maze, while rescuing Newt, follow the map directly to where she is being held. Flares will only waste time. If a screen has too many aliens, stay near the edge of the screen and toggle between screens with the joystick until there are fewer enemies.

In the final confrontation, trap the queen near the side of the screen and continue bouncing her against it until the bar turns completely green. Then hit her a few more times to make sure she'll stay stunned for awhile. Next, wait until she moves to the bottom of the screen. (Don't worry, she can't get

you.) Then move your claw directly on top of her. Now simply grab her and dump her in deep space. Voilà!

This way to Newt.

MOONMIST

Infocom. Text adventure. Your mission: As a famous American detective, you must help your friend Tamara discover what or who is haunting her castle. (*The hints and game are for Amiga, Apple II series, Atari, Atari ST, C 64/128, IBM PC/PCjr & compatibles, Macintosh.*)

RED VERSION:

- 🔑 Everyone seems to have something to say about the mysterious visitor.
- 🔑 A trip to the basement could be most enlightening.

- 🔑 Who knows where a trip to the library could lead you?
- 🔑 You might be able to unearth a few clues in the garden.
- 🔑 The family crest may lead to an arrest.

BLUE VERSION:

- 🔑 The third clue is in a suitable place.
- 🔑 Read Vivien's diary for some interesting facts.
- 🔑 Does "fossil skull" seem to ring a bell?

GREEN VERSION:

- 🔑 Mirrors can be very revealing.
- 🔑 Don't overlook the rhino head.

YELLOW VERSION:

- 🔑 The ghost's identity is most surprising!
- 🔑 All this searching for the third clue has my ears ringing.
- 🔑 Speaking of ears, maybe you could sneak a peek at that dashing earring Tamara has in her room.
- 🔑 And let's not forget to search near the Drawing Room.

H I N T H O T L I N E

ULTIMA IV

Origin Systems (Amiga, Apple, Atari, Atari ST, C 64/128, IBM PC/PCjr & compatibles). Role-playing adventure. Your mission: Destroy evil in yourself and throughout the land.

- 🔑 When the moon is new, search one space north of the Shrine of Sacrifice, and you will find the night shade.
- 🔑 When you're on a horse and want to cross a river, use the whirlpool. Be sure to yell "Giddyap" before

you cross.—GLEN ROBERTELLI, 11, Bloomfield, Michigan; JAYSON HOGAN, 15, Seattle, Washington

THE BARD'S TALE II

Electronic Arts (C 64/128). Graphic adventure. Your mission: Recover the seven shards of the Destiny Wand and become a Destiny Knight.

- 🔑 To gain an infinite amount of gold, deposit money in the bank and remove the scenario disk. Then insert a copy of the scenario disk. Withdraw all of your gold, reinsert the original disk, and deposit gold.

Remove the original disk, insert the copy, withdraw, reinsert original, deposit gold, remove original, insert copy, and withdraw. Repeat this until you have the Midas Touch.

- 🔑 To gain an infinite amount of magical items, sell the magic items at the trading post. Then press <Buy and remove original scenario disk. Insert a copy, purchase the magic item(s), remove the copy of the scenario disk, reinsert the original, buy, remove original disk, insert copy, purchase, and repeat the process until satisfied.—DELUX HUN, 15, Bellflower, California

WACKY AND ZANY HIT GAME IDEAS

Way back when, we asked you to come up with a crazy idea for a hit computer game. If we remember correctly, we promised to pick three of the most outlandish responses, award the creators \$10 apiece, and then print their ideas in the pages of FAMILY COMPUTING magazine. Well, we've kept our promise. Here are the three lucky—and very witty—winners, along with their game plots:

A PICKLE

By **Jon-Claude Gerow**, 16, Vero Beach, Florida

Your mission (Get your tongues ready!): Peter Piper is in a pickled

pepper plant. The pickled peppers are prepared and packed. Peter Piper must pick a peck of pickled peppers and take them to the patiently parked plane. But a mad, mutant pepper chases Peter Piper through plant-eating pickled peppers. This prevents Peter Piper from picking the proper peck of pickled peppers. Does Peter Piper get paranoid?? No! He eats a pink pickled pepper and pursues the mutant pickled pepper away from the pickled peppers. Pad-dle is preferred for perfect play. Whew! I'm purely pooped!!

GIRLFRIEND

By **Nash Robinson**, 14, Colorado Springs, Colorado

Your mission: Try to win over a new girlfriend with your wit and good nature, while avoiding large football players who are trying to steal her away from you.

TV NIGHTMARE

By **Scott Doudera**, 15, Alma, Illinois

Your mission: To win, you must fight through seven levels of television shows. Levels include keeping the A Team from building an evil avocado-throwing device, finding and capturing Johnny Carson before he takes off for another two-month vacation, and using various weapons to keep Richard Dawson from kissing your family.

Try The BERLITZ® Learn-At-Home Language Program for 21 Days... **RISK-FREE.**

Available in Spanish, French, German, and Italian Programs

The ease and effectiveness of this learn-at-home program should come as no surprise. It has been developed by the experts at BERLITZ, a name synonymous with excellence in language instruction.

Begin with the famous Berlitz ZERO™ exercises, so named because they start you "from zero" in your new language. You learn the same way you learned English, by listening and absorbing the language as it is used in everyday settings... then repeating what you hear. In a short while, you'll even be thinking in your new language.

Perhaps you want to learn a foreign language to help yourself in your business career, or simply to get more enjoyment out of foreign travel. Whatever your reasons, you'll find the Berlitz Learn-At-Home program to be a fast, fun, and effortless way to learn the language of your choice.

If your company is not reimbursing you for this course, it is tax deductible if used for business purposes.

The program, which comes in a handsome briefcase, contains:

- The 10-lesson, 90-minute ZERO cassette to familiarize you with the spoken language. You begin speaking immediately.
- Forty additional lessons on five 60-minute cassettes to put your growing command of the language to work in a variety of real-life situations.
- Six illustrated workbooks to visually reinforce what you're hearing and explain the usage of the language you're learning.
- A pocket-size two-way dictionary that makes word-finding a snap — whether it's finding the English meaning of a foreign word or vice versa.
- The Berlitz Rotary Verb Finder that lets you instantly change any of four dozen common verbs into present, past or future tense.

DAK INDUSTRIES INCORPORATED

Dear Customer,

You can have text and graphics together on one page with
your own logo and even a border at the top, to the side or at the
bottom. Now you won't have any more problems
when you want to print out letters. And, what's
best of all is that there won't be any bugs to
worry about in the program either.

You're sure to be amazed at how easy it
is to add pictures to your letters or reports.
And you can add drawings and charts to your
business letters or proposals.

This program is so easy to
use that you will use it from
now on. And what's really great is that if you
already use a word processing program, you can pick
up files that you're working in your other
program and use them in this one in minutes.

So no matter where you live in the United
States, you'll find that this program will
really use your mind.

So, if you do use your brain, you can
really get into the swing of using this
great new program.

There is simply no limit to the impact
that drawings can provide for your work. It
doesn't matter if it's a chart, a graph, or a
picture of a brain. You can do it all with
this exciting new program.

So why don't let the brain tell
you how to use it. It's a
stand in your
way. You don't
need many graphs
or drawings to make a really first class
impression. After all, they say that
a picture is worth 1,000 words. Just
think of how many ideas are
represented on this simple page of
"copy".

For formal proposals, for
marketing reports or for impressive letters, you can do it all
with this powerful new program.

Dear George,

Well, your sales for the last 7 months have been exceptional.
I'm just about the latest graphs, and I must say I'm impressed.
When you said that you could increase sales and keep royalties
even, I must admit that I was skeptical.

But, I think this graph says it all. I'm also very impressed
with manufacturing. We've
seen a real boost in the
increased sales in a
reduction in fixed costs.
So, overall, not only
have our sales increased
but as a percentage of
sales, costs have gone
down.

May was the only
month that didn't show an
increase in sales. But,
it showed a decrease in
costs. So, you can bet
that our bottom line
increased.

I'm very impressed
with the results and I
think that the money we
spent for automation and to improve your marketing effort was
well spent. At year end, we'll really be able to see how the
period will take. But, from these early results and the fact that
I know you'll REDUCE your efforts for the last 7 months of the
year, I think you'll be able to get some more of the things you
want next year.

The second graph on this page is perhaps even more important
than the first. As you know, we
were receiving far too many
customer complaints.

I'm very impressed with
the reduction in calls that
this graph represents. The
extra people in quality
control in customer
service are really paying off.
Considered in the cost of
complaints, this drastic
reduction clearly shows a
resounding impact to the
bottom line.

George, this has been a very good year so far. Let's push to
make the last 7 months look as good as the first 7. I know at the
board meeting that you'll be a major topic of conversation if this
trend continues.

For Daisy Wheel, Dot Matrix & Ink Jet Printers

\$89.90 Desktop Publishing Breakthrough

Imagine using a word processing and drawing program that lets you integrate charts and pictures that you 'paint' or 'clip' into your text. Well, if you use an IBM PC or Clone, now you can have graphically dramatic documents, from business or personal letters, to proposals, to organization charts, even with a daisy wheel printer.

By Drew Kaplan

It's easy. It's impressive. And, now your thoughts can be powerfully illustrated in both words and graphics.

After all, for illustrating abstract data and thoughts, nothing beats a dramatic chart or drawing. So, let your ideas leap off the page by using integrated text and graphics. Your thoughts are sure to make an impressive impact.

Whether you write letters, bank proposals, term papers, company manuals or news letters, you can forget complicated and expensive laser printing. And, you can forget complicated expensive desktop publishing programs.

Now for just \$89.90, you can use your daisy wheel, dot matrix or ink jet printer to print normal text. Plus, you can integrate simply fabulous graphs and drawings into your creations.

INCREDIBLY EASY

Savtek, a brain trust group, has developed an easy to use yet incredibly sophisticated integrated word processing and graphics program.

Just create your letters, proposals, or reports as you would with any other word processor. In fact, if you already have a document created in virtually any other word processor, you can 'grab' it into Savtek's instantly.

You'll produce visually powerful technical papers and manuals with drawings and charts, and dramatic marketing reports with graphs. You'll produce sales proposals with panache.

And since there's no complicated training needed (if you can run a word processor, you can run Savtek), you'll make great impressions, fast.

Anyway, once you've created the written part of your report, using Savtek's sophisticated automatic word processing features, you're ready to add pictures, charts and graphs.

Just select from the over 100 supplied changeable pictures or draw your own, using the automated ICON based drawing program.

Later, you'll learn much more about

the sophisticated drawing program that lets you draw, paint, fill, expand, reduce, copy, and move your pictures.

And, you'll form squares, circles and triangles automatically. Anyone can draw with it because it's totally automated and uses arrow keys and doesn't require a mouse. But, read on.

Once you've selected a picture, the computer will produce an automatically sized box representing it. Just position the box wherever you want the picture to be in the text.

Like magic, the actual picture will appear and the text will automatically reformat itself around it.

And, speaking of reformatting, this program will automatically make page-breaks and recalculate each page as you write or edit. If you make an addition to page 1 of a 10 page report, the effect will ripple through all 10 pages.

So, whatever length you've chosen for each page (including headers, footers and automatic page numbering), will automatically be preserved.

You'll particularly like the cut and paste features of this word processing program which allow you to copy, move or delete sections of your text.

Of course, you'll have automatic Word-wrap, Hidden Hyphenation, Justified Smooth Right or Ragged Right text. Plus, you'll have Find, Replace and Search.

And look how you can format your document. There are 5 page templates called rulers which allow you to automatically set up your page.

You can select any right and/or left margins, your tabs, one, two or three line spacing, and the number of blank lines at the top and bottom of your page.

Each of the 5 rulers comes with different default settings. But, you can adjust and save them or change them and even use several at one time on a page.

HOW DO THE PRINTERS WORK?

I use a daisy wheel printer because I like my letters to look personal. I've always had to switch to a dot matrix printer for graphs and illustrations.

Unfortunately, I couldn't have my graphics on the same page as my text.

Now, because this program can use the period on the daisy wheel to create all the charts and graphic symbols you see within this ad, I don't need to switch printers any more.

And while it doesn't create the graphics as fast as a dot matrix, the quality is superb. Now my graphics can be impressively integrated into my text.

Note: Every single sample page shown in this ad, was printed out on my EXP 400 Silver Reed daisy wheel printer.

Note: This program does not produce two column news letters in a single action. Simply create a double length column and cut it when you have it printed.

No matter what printer you use, daisy wheel, dot matrix (with or without near letter quality printing) or ink jet (color or single color), you'll have powerful looking documents to really present your ideas in the most professional manner.

DESKTOP PUBLISHING

Desktop publishing is about the hottest category of computer programming. It seems that everyone has discovered the impact of combining text and graphics.

And very impressive presentations are just what Savtek's ETG Desktop publishing system provides for you.

Imagine leveraging the capabilities of your own IBM or Clone, your own printer and your own keyboard to produce the documents you see on these pages, with nothing else to buy.

THE 1000 WORD PICTURE

First a confession. I can't draw. That's why you don't see drawings in DAK's catalogs. But I've been amazed at how creative I can be with this paint program.

It's easy. You do everything with the arrow keys and the return key. By using the arrow keys you can draw in any direction with a choice of 12 brush shapes.

There's an erase function to eliminate anything you don't like. And here's my favorite function. UNDO is a function that works throughout this program.

...Next Page Please

There's so much more. You can juggle a picture. Imagine, turning it over or sideways with the touch of a button.

So, for banners and pictures, you can

C. Itoh 8510, Epson FX-80, FX-85, FX-185, JX-80 (color), LQ-800, LQ1500, LQ80, LX80 with Grafixplus Plus or Grafixx, RX-80, Hewlett Packard 2225CS Think Jet or QuietJet, Laser Jet, or LaserJet Plus, IBM 8205 Graphics Printer, IBM Proprinter, IBM 3852 Jetprinter (color), Juki 6100, Mannesmann Talit Spirit 80, NEC 3500, 3510, 3520, 3530, 3550, 5500 series, 8023A, NEC Pinwriter P5XL, Pe, P7, [single or color], OKIDATA Microline 92, ML92, w/IBM Plug & Play, Microline 193, 20 (color), Panasonic KX-P1091, KX-P1091i, Quadram Quadjet (color), Radio Shack DMP-200, Silver Reed EXP400, 600, 800 and all EXP series, Star Micronics SG-10, Texas Instruments 855, 856, Xerox (Dialbo) D20, 630.

Look at the 12 sample pages I created. You'll see graphs, pictures and charts mixed into my text. I even designed a logo for my newsletter. Just think about the impact you'll make when you present your ideas with a combination of text and graphics. And oh, it's so incredibly easy to use.

I NEVER GOT THE MESSAGE

Use Home Message Center and Never Miss Another Call

BY PASQUALE M. CIRULLO

When I think back to my childhood summers in Brooklyn, New York, I remember always being out of the house—and missing many phone calls and messages from friends and family members. Answering machines solved some of the problem but they didn't help if a human answered the phone. My sisters would put messages for me on the refrigerator door—if they remembered—but the slips of paper would usually fall off before I saw them.

Our bulletin board-on-a-computer, *Home Message Center*, solves this problem. It keeps all the family members' messages organized and safe . . . and you can bet they'll never fall on the floor.

USING HOME MESSAGE CENTER

When you run *Home Message Center*, the names of the people with pending messages will scroll up the screen. (This continuous scrolling will prevent damage to your monitor so you can keep

the program running all day.) Just press any key on the keyboard to stop the scrolling and use the program's other options.

When the program detects that you pressed a key, it will ask you for your name. Be careful how you type in your name, because the computer will sign messages you leave for others with this name, and use it to determine whether you have any messages. For example, if you sign in as "Billy", you won't be able to read messages left for "Bill".

The program will then list a short description for each message that is addressed to you, including the addresser's name, what the message is about, and when it was left. At the bottom of the screen you'll see the four commands you can choose from: **S**tart, **R**ead, **W**rite, and **Q**uit. To give a command, simply type its first letter (no need to press RETURN or ENTER). For example, to Write a message, just press the W key.

START

This command tells the computer to go back to the beginning of the program and resume scrolling the names of the people who have messages pending. Choose this command when you have finished reading and writing messages and you want to leave the program running for others to use.

READ

If you choose **R**ead, the computer asks you which message you want to read. Enter the number that appears before the message and press RETURN or ENTER. The program will then display the message and ask you if you want to delete it. By answering "Yes" to the question, the computer will permanently delete that message. Answer "Yes" for messages that you are sure you want to delete. If a message is left for more than one person to read, only the individual who left the message can delete it. This prevents someone from inadvertently deleting the mes-

sage before everyone has read it. Once you've pressed Y or N, you return to the list of pending messages.

WRITE

When you tell the computer you want to **W**rite a message, the program will go to the Write screen. Start by filling in the addressee's name, what the message **R**Egards, the date, and the time. Your name will automatically be filled into the "From" line. (The version for IBM PC and compatibles will automatically fill in the Date and Time lines for you; the Commodore 64 version will fill in the Time line only. Make sure the computer's internal clock is set correctly before beginning the program!) To leave a message for more than one person to read, enter ALL on the "To" line.

Once the computer has this information, it will ask you for the message. The message can be no longer than 10 lines, with no more than 30 characters per line. (The Tandy

HOME HELPER PROGRAM

Color Computer version will allow messages that are 7 lines long with 25 characters per line.) Press RETURN or ENTER at the beginning of a blank line when you are finished with the message.

If you make a mistake, you can use the BACKSPACE key (CTRL-B on the Apple II or DELETE on the C 64) to backspace over the line to make your corrections, or you can edit the message before it is "mailed".

After you've typed in the message, the program will ask if you want to Mail the message, Edit the message, or Abort. Abort will erase the message from the computer's memory. Edit will give you a chance to change any part

of the heading or the message itself. When you choose Mail, the computer will "send" the message to the Home Message Center for the addressee to see and to read.

When you have finished writing your message, the program returns you to the list of pending messages.

QUIT

This command will tell the computer to end the Home Message Center program. The computer will first save all the pending messages onto your disk and then return you to BASIC. This command should be used only when you want to turn the computer off or use it for another program.

Apple II series w/disk drive/Home Message Center

Comparable Apple System (\$2495.00) \$1327.85 **\$692.70** All 8 Pieces Only \$499

Magic Window II: Word processing is easy and more efficient because of a simple-to-read menu system and editing commands. Many powerful features of professional quality programs and more. Supports virtually all major printer functions. Operates with most 80 column video cards or 40/70 column no-hardware modes.

Magalc: Rated as the best electronic spreadsheet on the market for Apple. The speed with which Magalc solves number problems allows you to accurately analyze decisions beforehand. Supports multiple RAM cards of most manufacturers in any combinations up to a full 512 K.

Magic Memory: File anything, any way you want to: names, addresses, important numbers, dates and notes. Your information is organized simply, easy to maintain, and available instantly. Supports all popular printers and video cards.

COMPUTER CARE KIT

Keep your computer looking —and acting—brand new!

Protect your equipment...your data...your sanity...with Philips Computer Care Products. Only \$39.95 complete!

Dust, smoke, and static can lay waste to hours of work on your computer. But Philips ECG gives you the vital Computer Care Products you need to protect your equipment and your data—in one complete package. For just \$39.95 per kit, you get all this:

- Floppy disk head cleaners (Single and Dual Side)
- Magnetic tape head and disk cleaner spray (1 1/4 oz.)
- Computer anti-static spray (8 oz.)
- Jet air cleaner (8 oz.)
- Computer glass and enclosure cleaner spray (8 oz.)
- Computer terminal screen cleaner pads (20)
- Lint-free wipes (50)
- Cleaning swabs (25)
- Complete easy-to-follow instructions

Bought separately, these products would cost much more. And the kit comes with a no risk 30-day money-back guarantee. Whether you store your files on floppy disks or tapes and cassettes, Philips ECG can help you put a clean end to potential computer problems. Write or call for your Computer Care Products kit today.

CRASH PREVENTION SALE!

Yes,

I want to put a clean end to potential computer problems. Send me _____ Philips ECG Computer Care Products kit(s) for just \$39.95 each, plus \$2.95 shipping and handling (NY State residents please add 8% sales tax). If not completely satisfied, I can return the kit(s) within 30 days for a full refund.

DIGITAL VISION

ALL NEW

COMPUTEREYES/2™

VIDEO DIGITIZING SYSTEM FOR APPLE II SERIES COMPUTERS

The world's highest-quality, lowest-priced video digitizer has just gotten even better! The new card-based COMPUTEREYES/2™ for Apple II, II+, IIe and compatibles connects to any standard video source to capture real-world images on your Apple's graphics display. Hundreds of applications!

COMPUTEREYES/2™ features include:

- Fast scanning—single 6 second scan for all capture modes
- Automatic and manual control over both brightness and contrast
- Keyboard-controlled video switching to allow previewing the video source on the Apple monitor
- New, familiar, Appleworks-style menu
- Standard software supports Apple Hi-Res and Double Hi-Res graphics, plus Gray-Scale boards for really superb images!
- Optional COMPUTEREYES/2™ Enhancement Software package available to convert COMPUTEREYES images to Printshop, Printmaster, Newsroom, and other formats; perform image negate, flip, etc
- Also available as complete system including quality video camera

STILL ONLY \$129.95

Versions available for:

- Apple II, II+, IIe and IIC
- Commodore 64/128
- Atari 800/800XL/130XE
- IBM PC and compatibles (\$249.95—includes additional features)
- Atari ST (\$249.95—full color digitizer)

See your dealer or order direct. Mass. residents add 5% sales tax. Mastercard, Visa accepted. To order, or for more information, write or call:

SPACE RACE

BY JOEY LATIMER

Welcome to the *Space Race*. You are the captain of a V-Racer, one of the fastest vehicles in the galaxy. To maintain your piloting skills and test your ships' speed and maneuverability, you like to take test drives through a nearby asteroid belt. The asteroids in the belt were once used for mining precious metals, but now the intricate tunnel system makes a challenging race course. To maneuver your ship through the tunnels and avoid floating bombs, press "B" to move left, and "N" to move right.

As you move the V-Racer through a passageway, you gain points. When you

crash, you lose one of your three ships, your score is displayed, and you can continue with a remaining ship. Each time you survive the tunnel tests and reach the core of an asteroid, you will receive a hefty supply of bonus points. When you crash all three V-Racers, the game is over, your score is totaled, and you are given the option of quitting or playing again. Good luck, Captain! PROGRAMMER'S NOTE: Except on the Atari, it's easy to change the movement keys, "B" and "N", to other keys you might prefer. For example, you can replace the "B" and "N" in line 20 with "J" and "K".

COMPUTERS WE COVER

We regularly present two or more programs in each issue for the Apple II series; Atari 400/800, 600/800XL, & 130XE; Commodore 64 & 128 (in C 64 mode); IBM PC and compatibles; and Color Computer. However, occasionally we have to omit versions when a program requires capabilities that some of these computers lack. For example, many Microtones programs can only run on computers that have three voices, which eliminates the Apple II series; IBM PC and compatibles (except the PCjr with Cartridge BASIC and the Tandy 1000); and Tandy Models III, 4, and Color Computer.

In addition, we publish at least one program each issue for the Adam, Macintosh, Tandy Models III/4, TI-99/4A, and VIC-20. In the future, we also hope to cover the Atari 520ST and the Amiga. This month, these programs can be found here in The Programmer.

GET ONE FREE. Buy one Graphics Scrapbook, and we'll send you a free Graphics Scrapbook of your choice. Send your receipt and Proof of Purchase (located on the inside of the Graphics Scrapbook box) to Free Scrapbook offer, c/o Epyx, Inc. Please specify which Scrapbook you'd like, as well as your computer system. Offer good 3/1/87 to 6/30/87.

There are two things almost everyone has in common. An active imagination. And a tough time putting it on paper.

But now we present our *Graphics Scrapbook*™ series. A huge collection of pictures that enable you to easily bring your creative inspirations to The Print Shop,™

PrintMaster™ or Create a Calendar.

On each disk there are over 100 unique pictures. For example, in our *School Scrapbook*, teachers and students will find everything from cheerleading to finals. In the *Sports Scrapbook*, dozens of sports, mascots

Over a hundred eye-catching pictures on every disk.

and trophies. In the *Off the Wall Scrapbook*, well, just expect the unexpected. And plenty more Scrapbooks are coming. So even if you can't draw a straight line, it's okay.

As long as you make a straight one to the offer below.

Apple & Compatibles, C64/128, IBM & compatibles.

ALLOW US TO DRAW YOUR ATTENTION.

Time flies. It might as well look snazzy as it goes by.

Introducing *Create A Calendar*.

Our simple, powerful tool that lets you design daily, weekly, monthly or yearly calendars. In moments.

Among numerous features, it includes graphics, borders and fonts for just about every occasion. Or use your own pictures from the Graphics Scrapbooks or Print Shop compatible graphics disks.

What's more, it lets you write multiple lines of text on every date. To make it easy to keep track of everything

you're supposed to do. And everything you've done. So this year, go ahead and make your own calendars.

There couldn't be a nicer way to pass the time. **EPYX**

USE OUR PREVIEW DISK TO DRAW YOUR OWN CONCLUSION. Send your name, address, phone number, computer type, and a check or money order for \$1.50 to Calendar/Scrapbook Preview, P.O. Box 8020, Redwood City, CA 94063. Canadian orders add 50¢ postage. 6-8 weeks delivery. Expires 8/30/87. Valid only in cont. U.S. and Canada.

THE UNFOUNDED COMPOUND

BY KAREN KANE

You are a chemistry professor at a major university and must stay on the cutting edge of new and exciting developments in the discipline. One evening, while experimenting with some of the rare elements, you accidentally create a new chemical compound. Extensive lab tests show that the compound—which you have dubbed Kanium—can exist in a solid, liquid, or gaseous state, and decomposes at a rapid rate. What's more, Kanium demonstrates properties so versatile that it could revolutionize present technology. You even suspect that the substance—in its gaseous form—could neutralize the disastrous effects of a nuclear explosion.

This is your chance to prove yourself to the scientific community—to make history, but you have no idea how to re-create the compound. So you set out on a worldwide search for natural sources of Kanium.

You are equipped with aircraft that will fly as high as 10 kilometers above sea level; diving gear and drills that will lower you to 10 kilometers below sea level; and tools to help you comb the mountains, deserts, and jungles of the earth. Most important, you carry your homemade Kanometer, a device that uses Kanium's strong, quasi-magnetic attraction to itself to sense the compound's presence in any state. Your Kanometer will give a distance reading but will not indicate the direction in which the substance can be found.

FIND IT FAST

To find the Kanium, type in the version of *Kanium Quest* for your com-

puter and run it. Then, all you have to do is enter a whole number for latitude (from -90 degrees South to 90 degrees North), longitude (from -180 degrees West to 180 degrees East), and altitude (from -10 kilometers below sea level to 10 kilometers above sea level). For example, if you want to begin your search off the shores of Kill Devil Hills, North Carolina, you might enter 36,-75,-5 for latitude, longitude, and altitude. The Kanometer will tell you how far you are from the nearest source of Kanium and how many weeks are left before your supply of Kanium decomposes; and, it will ask for your next search position. By examining the Kanometer readings, you can narrow in on the powerful new chemical substance Kanium and become world famous for your find!

Time, however, is your only obstacle. Because you have only a small amount of Kanium for your Kanometer, you must locate more before the sample decomposes.

NOTE: Once you find the exact coordinates of the Kanium, it might be fun

to look them up in an atlas to see where your search led you.

Kanium Quest was inspired by a similar pro-

gram submitted by Dr. Michael W. Ecker, editor and publisher of the Recreational & Educational Computing Newsletter.

IBM PC & compatibles/Kanium Quest

This program has been tested and found to work on the following computers and hardware configurations using the BASICS shown: IBM PC w/Color/Graphics Monitor Adapter, w/Disk BASIC D2.00 or Advanced BASIC A2.00: IBM PCjr w/Cartridge BASIC J1.00; and Tandy 1000 w/GW-BASIC 2.02 version 01.01.00. It should also work on many other PC compatibles.

TIPS TO THE TYPIST

1. Read instructions and program headings carefully.
2. Don't let fatigue and boredom contribute to inaccuracy. If you're new to programming, type in a longer program in easy stages, saving each installment as you go.
3. Assume that every character in a program listing must be copied accurately if a program is to work.
4. Watch out for potential trouble spots. About 90 percent of all typing errors occur in DATA statements.
5. Be aware that our program listings are printed 54 characters wide. Thus, a single BASIC program "line" (sometimes called a "logical line") may appear as several lines in our listing. If you are typing along and reach the right margin of the printed listing, don't press RETURN or ENTER before checking to see if the program "line" you're typing really ends there.
6. To correct an error in a BASIC program line, type the line in again from the beginning, and press RETURN or ENTER to replace the old line.

"The Bard is Back!"

From impossible dungeons and split-second snares, the Bard and his party emerge. The Sceptre, so long forgotten, gleams with power like an exploding sun. Even Phenglei Kai, the ancient archmage, bows his head in awe.

"I smell serpents!" Slipfinger squeals, stealing away like the thief he is. Two archdragons slither out of the ground, their eyes burning with the relentless fury of treasure lost.

Protected behind the flame lizards, beyond the reach of normal weapons, a cackling wizard begins the eerie chants of a death spell. A spell that can finish the Bard and his party.

The time has come to battle-test the magic of the Destiny Wand—and reveal the awesome powers of The Destiny Knight.™

The Best Ever Dungeon Role-Playing Game

- 50% bigger than Bard's Tale.™
- An all-new story line.
- Six cities and a huge overland wilderness to explore.
- Dozens of new spells – 79 spells in all.
- New real-time dungeon puzzles. You have to get through them before the clock stops ticking.
- Summon and name monsters to become a permanent part of your party.
- More strategy in combat encounters – the weapons and spells you choose depend on the enemy's distance.
- A bank and casino.
- A starter-dungeon for building up your low-level characters.
- 6 guilds for easier game saving.
- Optional use of Bard's Tale characters. Bard's Tale experience not required.
- Cluebooks available for both Bard's Tale and Bard's Tale II.™

You get a new class of magic user – the Archmage. With 8 powerful spells like Heal All, Fanskar's Night Lance, and the awesome Mangar's Mallot.

There are over 100 monsters, like this Kner Drone. Many animated. All dangerous.

25 scrolling dungeon levels. All in color. All 3-D. Including 7 different Snares of Death, a new kind of real-time puzzle.

The Bard's Tale II

The Destiny Knight

from

ELECTRONIC ARTS™

Optional use of characters from Ultima III™ or Bard's Tale™. Apple version uses Wizardry™ characters, too!

HOW TO GET IT: Visit your retailer, or call 800-245-4525 (in CA call 800-562-1112) for VISA or Mastercard orders. To buy by mail, send a check, money order, or VISA or Mastercard information to Electronic Arts, P.O. Box 7530, San Mateo, CA 94403. The price is \$39.95 for the Commodore 64 version, and \$49.95 for the Apple version. Add \$5 for shipping and handling (\$7 Canadian). Allow 1-4 weeks for delivery. The Bard's Tale II and Electronic Arts are registered trademarks of Electronic Arts. Ultima is a registered trademark of Richard Garriott. Commodore is a trademark of Commodore Electronics Ltd. Wizardry is a trademark of Sir-Tech Software, Inc. For a copy of our complete catalog, send 50¢ and a stamped, self-addressed envelope to Electronic Arts Catalog, 1820 Gateway Drive, San Mateo, CA 94404.

LOW PRICED SOFTWARE FOR THE IBM PC AND COMPATIBLES

EDUCATIONAL: Is your child having problems at school? If so here are some software products that will enhance his or her learning:

- Spelling Quiz
- Geography U.S.A.
- Math Quiz
- Our Solar System

BUSINESS: High priced software can cut deeply into the bottomline before you can ever see the advantages of using it. Look to RPS for cost-effective software like:

- MASS (Activity Tracking System)
- R-T-K (A Right-To-Know Training System)

SCIENTIFIC: For those that are of an inquiring nature, RPS has programs that can satisfy your curiosity as well as provide a valuable understanding of today's world:

- RADCOM (Predicts downwind radiation levels from a nuclear accident)
- CHEMCOM (Predicts downwind chemical levels from a hazmat accident)

DESIGN NEEDLECRAFT CHARTS

for Counted-Cross-Stitch, Needlepoint, Latch Hook, Knitting, etc. using a revolutionary new computer program—

The Stitch Grapher.

Graphs as large as 240 X 400 stitches with up to 30 symbols may be generated and printed with any of 3 grid styles along with a color chart. A unique windowing feature allows the designer to move, copy, rotate, mirror image, save and re-use previous designs.

The **Stitch Grapher** is compatible with the **64K Apple II** and **256K IBM-PC** microcomputers. Disk plus 90-page spiral bound manual—\$89.95. Dealer inquiries welcome. To place an order, or for complete information contact

COMPUKRAFTS

RFD 2 Box 216, Lincoln, MA 01773
 (617) 259-0409

Apple version supports the ImageWriter and Scriber printers directly (depicted grid style is available for these printers only). Other dot matrix printers require graphics capable interface card or separate support software. IBM-PC version supports CGA, EGA graphics adapters and IBM / Epson compatible printers.

ROOTS II™

Organize your family history using **ROOTS II**, the most comprehensive genealogy program available for the IBM PC and compatibles. \$195 plus applicable CA tax.

Call today for free brochure.

COMMSOFT ROOTS for YOU too!

CIRCLE READER SERVICE 10

And your Earls and Viscounts. If you've got royal ancestors, we have the noble software that can help you trace them down.

Family Roots and your Apple, Macintosh, IBM, Commodore, Kaypro, TRS-80,* and many others, offer individual and group sheets, charts, name indices, general search and text capabilities. Adapts to most disk drives, printers, and screens. You get more utility programs, plus lots of personal control. A comprehensive (new) manual is included. All for just \$185.

Write or call today for more information and a free brochure.

LOTTERY PLAYERS

\$\$\$\$\$\$

Why guess at those lotto numbers!
Your computer can give you a real edge in those big state lottos!

"The Lotto Program" will quickly tell you which numbers you should be playing! No random numbers, this program actually analyzes the past winners so you can project which numbers will likely come up in the next few drawings. You simply add the latest winners each week and the program does the rest. It's fun and easy to use and could be worth millions of dollars! APPLE, C/64, IBM and ATARI 800/130 versions are ONLY \$21.95. The Super Macintosh version is only \$29.95. Visa, MC or checks welcome. Please add \$1.50 for shipping. We give good fast service!

Know Thy PC

Peaks 'n Pokes, a classic since 1982, shows you how to read and change your system configuration!

- Read number of drives (including types on AT class), type of machine, type of monitor, system memory, number of printers & COM ports.
- Use 4 printers as LPT1. Detect printer errors before printing — No more timeouts. Swap monitors on the fly.
- Plug characters into the keyboard buffer.
- Unprotect IBM and GW-BASIC programs saved with "P" option.
- DOS/BIOS function calls and interrupts from BASIC, Pascal, C and Fortran.
- Read file directory, read/change file attributes, get free disk space.
- Force diskette motor on for faster throughput.
- Boot system from BASIC and much, much more.

Not copy protected. No royalties in compiled programs. \$45 + s/h (\$3 US, \$5 Canada, \$18 others). Requires IBM or close compatible. In Georgia, add tax and call (404) 973-9272. MC/VISA OK.

CAMPS

AN OPPORTUNITY UNLIKE ANY OTHER

The nation's largest computer camp offers all traditional camping activities and camaraderie in a beautiful setting. Your child will have exclusive use of a major brand microcomputer for at least 6 hours every day.

An experienced staff ratio of one to three and a computer ratio of one to one uncaps the creativity of young people. Students receive hands-on experience in robotics, graphics, color, sound, languages and telecommunications.

Complete details on the 1, 2, 4, and 8, week coed sessions for ages 8-18 are available in a free brochure. Call or write for yours!

Call (317) 297-2700 or write to

CIRCLE READER SERVICE 42

READER SERVICE FREE INFORMATION

Readers are invited to learn more about our advertisers' products. This is a free service to FAMILY COMPUTING readers. Follow the directions below and the materials will be sent to you promptly and free of charge.

1. Circle the number(s) on the card that corresponds to the key number appearing on the advertisement. For advertisements with no number, please consult your local retail outlet or write to the address listed.
2. Simply mail the card. Postage is necessary. The literature you requested will

be mailed to you directly, free of charge by the manufacturer.

3. Print or type your name and address on the attached card. To receive the requested information, answer all questions on the reader service card.
4. Circle number 138 on the reader service card if you wish to subscribe to FAMILY COMPUTING. You'll be billed for 12 big issues for only \$19.97.
5. Do not use the card for change of address. Please use the subscription service form in the magazine.

AIM HIGH

PRESENTING TECHNOLOGY THAT LETS YOU PROGRAM YOUR OWN DESTINY.

Electronics and computer equipment can be state-of-the-art today. And ready for the garbage can tomorrow.

Demand for technology is changing that fast. And the people who can stay on top of it can write their own ticket in this world.

That's the beauty of the Air Force.

We can put you to work with technology that you may not read about in magazines for years.

We can teach you how to make sense of the

most intimidating circuitry in existence anywhere.

If you attend college, we'll pick up 75% of your tuition. You can even earn an associate degree from the Community College of the Air Force.

What does all that mean?

It means there's no telling where technology is going in the future.

But with Air Force training, you've always got a future to look forward to. For more information, call an Air Force recruiter at 1-800-423-USAF.

Uncompromising performance at an incredible price.

The Tandy® Color Computer 3

More colors, superb graphics,
greater power for only \$219⁹⁵

Our most powerful Color Computer

Finally, the ideal computer for your family: our most advanced Color Computer ever. The Color Computer 3™ is great for small business and home applications. You get the advantages of a high-priced computer—without the high price!

A rainbow at your fingertips

The Color Computer 3 features 128K memory (expandable to 512K), for real

programming power. With the CM-8 High-Resolution Monitor (26-3215), you can create razor-sharp graphics using 64 colors.

The Color Computer 3's Extended BASIC features 21 new commands that allow you to alternate screens, colors, and backgrounds—all at a higher resolution and with a greater variety of colors.

Compatible and expandable

Best of all, the new Color Computer 3 is compatible

with software and accessories designed for the Color Computer 2, including a wide selection of educational, personal-management and game programs. Expand with a modem or printer, or add a disk drive to create a sophisticated disk system and open the door to a library of advanced disk software.

In today's confusing computer market, the advanced Color Computer 3 (26-3334) is your affordable alternative. Come see it today at your local Radio Shack.
